Experience

Lead Data Analyst | Heartland Community Network Jan 2025 - Present

- Designed and maintained scalable **ETL pipelines** ingesting and transforming 500k+ operational records from multiple source systems into a centralized **Snowflake** data warehouse, reducing data preparation latency by 40%.
- Developed financial and operational dashboards in **Power BI** (custom **DAX** measures, semantic models, row-level security) giving senior leadership real-time visibility into workforce spend, KPIs, and performance trends.
- Centralized 1,000+ legacy operational records into Snowflake, establishing **data governance** standards, naming conventions, schema documentation, and access controls to improve data quality and auditability across cycles.
- Served as primary liaison between operational stakeholders and the data team, eliciting **reporting requirements**, translating business needs into data specifications, and communicating pipeline assumptions and limitations to non-technical audiences.

Data Analyst | Indiana University - Bloomington May 2024 - Aug 2024

- Executed large-scale **data processing and transformation** workflows on IU's HPC system, reducing processing time by 40% while maintaining rigorous data quality standards and methodological consistency across the pipeline.
- Conducted **anomaly detection** and trend analysis across complex multi-source datasets, reconciling inconsistencies and documenting data definitions and assumptions for downstream stakeholder consumption.

Assistant Manager | Indiana University - Bloomington May 2024 - May 2025

- Maintained HIPAA and NIST-aligned **data governance** protocols for sensitive institutional datasets, enforcing access controls, data anonymization standards, and audit trail documentation across all data processes.
- Built reusable **workflow automation** (Power Query, VBA macros, SQL) and standardized data documentation that improved pipeline consistency and achieved a 100% reduction in compliance reporting anomalies.

Data Analyst | Persistent Systems - India May 2022 - Apr 2023

- Built scalable **ETL pipelines** (Python, AWS S3/Glue) consolidating transactional and customer data from multiple CRM and e-commerce source systems into centralized analytical platforms, supporting downstream sales performance and **customer segmentation** reporting.
- Designed and deployed 7 dynamic **Power BI** dashboards with live data sources, custom **DAX** calculations, and row-level security for a retail e-commerce client, enabling real-time visibility into campaign performance, sales metrics, and conversion KPIs.
- Executed advanced SQL-based **customer segmentation** on large transactional datasets, identifying high-value cohorts and driving a 60% lift in targeted acquisition and a 35% increase in user conversion.

Projects

Quantium: Retail Customer Segmentation and Revenue Analytics | *Python, K-Means, PostgreSQL*

- Built an end-to-end **retail analytics** pipeline on 500k+ transactional purchase records, designing structured PostgreSQL data models, applying K-Means clustering to segment customers by purchasing behavior and lifetime value, and forecasting **promotional spend impact** to support revenue and inventory planning decisions.

DataPulse: Cloud ETL and Data Warehouse | *GCP, BigQuery, Looker Studio*

- Engineered a serverless **ETL pipeline** ingesting transactional data from distributed source systems into a centralized **BigQuery** data warehouse, powering real-time operational KPI dashboards in Looker Studio with automated data refresh and performance monitoring.

Education

Indiana University, Bloomington

Masters in Data Science (Relevant Courses: Data Mining, Statistics, Big Data In Economics)

Shri Ramdeobaba College of Engineering and Management

Bachelors in Computer Science (Relevant Courses: Distributed Systems, AI, OOP)

Skills

- Data Engineering:** ETL/ELT pipelines, Snowflake, BigQuery, AWS (S3, Glue, Athena), GCP, data lakes and warehouses, schema design, data governance and quality
- BI and Analytics:** Power BI (DAX, semantic models, row-level security), Tableau, Looker Studio, Advanced Excel (Power Query, PivotTables, VBA macros)
- Programming and SQL:** Python (pandas, NumPy, SQLAlchemy), SQL (PostgreSQL, CTEs, Window Functions), distributed data processing
