

Education

University at Buffalo, SUNY <i>Master of Science in Computer Science and Engineering, GPA: 3.33/4</i>	Aug 2022 – Feb 2024 <i>New York, USA</i>
Vellore Institute of Technology <i>Bachelor of Technology in Computer Science and Engineering, GPA: 8.03/10</i>	Jul 2016 – Jun 2020 <i>Vellore, India</i>

Technical Skills

- Languages: Java, Python, JavaScript, TypeScript, HTML, CSS, SQL , NoSQL
- Frameworks/Libraries: Spring Boot, Spring JPA, Spring Security (OAuth 2.0, JSON Web Tokens), Spring MVC, RESTful APIs, AngularJS, React, Redux, Linux, Shell Scripting, Agile, JUnit, Mockito, Apache Airflow
- Databases: MySQL, PostgreSQL, Oracle DB, MongoDB
- Cloud: AWS, Azure, EC2, S3, Lambda, RDS, SQS
- Developer Tools: Docker, Kubernetes, VS Code, Git, IntelliJ, Postman, Redis, GitHub, Maven, JMeter, Jenkins

Experience

University at Buffalo <i>Backend Developer</i>	Feb 2024 – Present <i>New York, USA</i>
Technologies: Java, Spring Boot, RESTful API, Spring JPA, Docker, CockroachDB, InfluxDB, AWS, OAuth 2.0, JWT	
- Implemented JWT and OAuth 2.0 in OneDataShare, configuring Spring Security as an authorization server and securing microservices as resource servers for unified access control. - Containerized microservices using Docker and deployed on Amazon ECS, ensuring scalability and high availability, while leveraging CloudWatch for resource optimization. - Led migration to OneDataShare Metadata V2, optimizing metadata management with advanced features for enhanced performance and historical record maintenance.	
Digii <i>Software Engineer II</i>	Dec 2021 – Jul 2022 <i>Bangalore, India</i>
Technologies: Java, Spring Boot, HTML, CSS, ReactJS, JavaScript, Spring JPA, MySQL, RESTful API, AWS	
- Architected and built a dynamic solution for tech fest concert ticketing for marketplace module using React and Redux, improving performance with caching and lazy loading. - Designed the database and created a microservice for the ticketing system, integrating it with a Single Page Application (SPA) in a distributed environment. - Implemented a scalable serverless 'Bulk Receipts Generation' architecture using AWS Lambda, SQS queues and S3 bucket, enhancing report efficiency, improving EC2 and RDS health by 30%. - Executed load tests with JMeter for up to 5K users and unit tests with JUnit and Mockito, achieving 85% test coverage and successfully deploying the feature to 82 colleges, impacting 30K students.	

Bank of America <i>Software Engineer</i>	Jan 2021 – Dec 2021 <i>Gujarat, India</i>
Technologies: Python, SAS, Teradata SQL, Apache Airflow, Docker, Kubernetes, Kafka	
- Streamlined credit card campaign processing by automating ETL pipelines with Apache Airflow and using Kafka for email dispatch, improving data processing and approval workflows, saving 680 hours/year. - Integrated SAS with Python to drive 4 high-impact Home Loans campaigns, impacting over 5M clients. Containerized with Docker, ensuring scalability and reducing manual work by 60%. - Collaborated cross functionally to address API integration challenges and troubleshooting issues Enhanced data accessibility and streamlined data flows, boosting efficiency across departments.	

Bank of America <i>Senior Technical Associate</i>	Jul 2020 – Dec 2020 <i>Gujarat, India</i>
Technologies: Java, HTML, CSS, JavaScript, AngularJS	
- Revamped Paycheck Protection Program UI/UX with HTML Embed/iFrame Tags, cutting quality control time by 7-8 hours/week and enabling the processing of an additional 3K loans weekly. - Developed an end-of-day reporting feature, generating daily summaries for managers and tracking loan processing, improving oversight and workflow management.	

Chipsan Aviation <i>Software Engineer</i>	Aug 2019 – May 2020 <i>Vellore, India</i>
Technologies: Java, Spring Boot, PostgreSQL, RESTful API	
- Optimized maintenance scheduling by implementing a task notification feature, efficiently tracking aircraft tasks and generating timely alerts for due tasks, cutting aircraft downtime by 25%. - Enhanced operational efficiency with a component life cycle tracking feature using cron jobs and Spring Boot, providing real-time reports on component retirements and overhaul schedules for proactive maintenance planning.	

Projects

Smart Shoppe <i>Java, MySQL, JavaScript, AngularJS, Spring Boot, Rest APIs, HTML, CSS, AWS</i> Demo	
Smart Shoppe addresses the challenges of e-commerce industry for users by enabling fast price comparisons across major retailers, streamlining shopping with integrated vendor orders, payments, and delivery tracking.	
Air Writing Recognition <i>Python, OpenCV, Deep learning, NumPy, TensorFlow</i> Demo	
Developed and implemented advanced Air Writing Recognition technology, utilizing Neural networks to accurately interpret and transcribe gestures into text, enhancing accessibility and interaction in digital environments.	
Book my Housekeeper <i>Java, PostgreSQL, JDBC, Spring Boot, Rest APIs</i>	
Revolutionized household service booking with an app connecting users to local housekeepers, similar to ride-hailing apps.Features include user profiles management, user preferences, and service requests.
