Professional Summary

Accomplished PL/SQL developer and Process Analyst with over 10 years of specialized experience in database and application development and systems optimization. Besides designing and improving business processes to increase efficient, and enhance data quality. Proven track record in development, innovation and improving operational efficiency in the energy and telecommunications sectors. Expert in SQL, PL/SQL, ETL processes.

Skills

- Proficient in SQL & PL/SQL (Oracle 12c and 19c)
- Requirement gathering and stakeholder management.
- SOPs and procedures documentation.
- Knowledge Python connecting to Oracle, SQL Server database.
- Data analysis and reporting (Excel, SQL and Power BI).
- Training and onboarding on new or updated processes.
- Software and hardware support customers.
- Incident resolution and stakeholder communication.
- Teamwork and problem solving.
- Fast and self-learner and eager to learn new technologies and procedures.
- Adaptability and critical thinking.

Work History

Team Trainer – Receiving

Wholefoods Market

November 2024 – Present

- **Onboarding:** Coordinates and delivers training for New Members during their first few shifts, supporting their onboarding with New Member Connections.
- **Training Records:** Organizes, tracks, reports, and maintains accurate training records using Whole Foods Market's learning systems.
- **Product knowledge:** Educates team members on new products, their differentiators, sales tactics, and proper department placement.
- **Collaboration:** Works in partnership with Team Leadership, Store Trainers, and other qualified team members.
- **Unload delivery trucks:** using pallet jacks or carts to move pallets and boxes safely from the dock to the receiving area.
- **Verify deliveries:** against invoices or packing slips (correct items, quantities, brands, and codes), and note any shortages, overages or damage.
- **Check product:** condition and temperatures for refrigerated and frozen items and refuse or record damaged/unsafe product.

- **Use store system:** to receive orders into inventory, adjust quantities, and record discrepancies.
- **Use proper PPE** (non-slip shoes, sometimes cut resistant gloves) and follow all safety procedures for lifting and moving loads.

Senior Process Analyst

National Energy Company of Ecuador CNEL Ecuador

January 2019 – July 2024

- **Analyze current IT processes** (incidents, changes, requests, deployments, etc.) to find bottlenecks, waste, and risk.
- **Map and document workflows** (flowcharts, procedures), so everyone sees who does what, with which systems, and in which order.
- **Gather requirements from stakeholders** (IT operations, developers, business users, management) through meetings, workshops, and interviews.
- **Create and maintain documentation:** process diagrams, SOPs, knowledge base articles, and change records.
- **Define and track KPIs/metrics** (SLA, MTTR, backlog, change failure rate, etc.) and build reports/dashboards to show performance.
- **Participate in testing** to ensure tools and workflows match the defined requirements.
- **Continuously review processes** to identify new improvement opportunities, especially when new tools, regulations, or incidents appear.

PL/SQL and SQL Developer

National Energy Company of Ecuador CNEL Ecuador

December 2010 – December 2018

- **Design, develop, and maintain database applications using the PL/SQL programming language.** This includes writing stored procedures, functions, triggers, and packages to automate database tasks and implement business logic.
 - Creation of modules in PLSQL programming for the Oracle 10g database in the Human Resources System, executing automated processes, which improved response times.
 - Creation of structures (tables, triggers, views, indexes, permissions), functions, and procedures for the Time Records System of the CNEL EP workers, which are validated by the Human Resources Department.
- **Analyze database performance,** identify bottlenecks, and implement optimizations such as indexing, query tuning, and database schema redesign to improve the efficiency and scalability of database applications, enhancing database performance by 50%.
 - Refining queries and indexes in the Oracle 10g Database using the explain plans option in the PLSQL Developer tool for the Financial Accounting System, improving processes for accounting closings and supplier payments.
- **Maintenance of the payment online services app** between the National Energy Company and 8 banks connected, it was developed in Java with Oracle (SQL), creating y tuning stored procedures and functions in DB.
 - Provide support for the integration of payment by credit card and bank transfers with CNEL EP in Oracle 11g Database, verifying data issues and providing solutions.
 - Verification of data errors in the Financial Accounting System in the Oracle 10g Database, identification of errors, and reconstruction of the data or structure.
- **Investigate and resolve issues related to database applications,** such as incorrect data, performance problems, and runtime errors. It includes debugging PL/SQL code, investigating database logs, and collaborating with other team members.
- **Document the database applications developed,** including code comments, technical specifications, and user guides.
- **Participate in the design and implementation of Extract, Transform, and Load (ETL) processes,** to move and transform data between different data sources and the database, with SQL scripts.
 - Create structures, functions, and procedures (ETL) for migrating CNEL EP's old Commercial System to SAP, based on Oracle Database. The information was shared with the consultants to be uploaded to the SAP CRM.

- **Integrate applications** through Java development to ensure connectivity and functionality, reducing load times by 35%.
 - Creation of procedures that run daily to integrate the Human Resources System with the Financial System, sharing employee payment information across the company.
- **Meetings with end users to execute tests** of the changes in the required systems, carrying out activities in the Oracle development environment.
- **Meetings with Banks to improve CNEL EP's Collection System**, creating test scenarios in the development environment (Oracle 9i) and executing traces.

Senior Software Engineering / Business IT Analyst

National Telecommunication Company of Ecuador CNT Ecuador

March 2007 – November 2010

- **Collaborate with stakeholders** to understand business needs and translate them into clear, detailed technical requirements.
- **Create and maintain comprehensive documentation** for functional and technical requirements, including detailed specifications, use cases, and process flow diagrams.
- **Design and coordinate testing activities** to ensure that developed solutions meet specified requirements and perform as expected.
- **Serve as the primary point of contact** between end-users, the development team, and other departments, facilitating communication and addressing any issues.
- **Provide training and support** to end-users on new systems and processes, ensuring effective adoption and utilization.
- **Identify and resolve complex issues** that arise throughout the project lifecycle, offering both technical and operational solutions.
- **Monitor the performance** of systems and applications in production, analyzing metrics to ensure optimal operation.
- **Identify and manage risks** associated with the implementation of new solutions and technologies, mitigating potential impacts on the business.
- **Supported database development** with expertise in SQL and PL/SQL Oracle.

IT Support – Helpdesk / Process & System Support

National Energy Company of Ecuador CNEL Ecuador

December 2004 – February 2007

- Knowledge in computer hardware, especially software in Windows environment
- Provide support by addressing service tickets from system users, troubleshooting and resolving hardware and software problems.
- Install, configure, and maintain computer systems, software, and peripheral devices (e.g., printers, scanners).
- Support users via phone, email, remote access or in-person to solved their problems.
- Maintain records of problems encountered and their resolutions, contributing to a knowledge base for future reference.
- Basic knowledge in TCP/IP, DNS and Active Directory.
- Collaborate with other IT team members to implement new automated solutions derived from previously solved problems.
- Test and revise code to eliminate errors.
- Used basic TCP/IP, DNS, and Active Directory knowledge to support network and access issues.

Education

Bachelor of Science of Computer Engineering

Polytechnic University of Ecuador ESPOL

April 2007 – October 2004

Certification, courses and Seminars

- Oracle Fusion Cloud Applications HCM Process Essentials – Oracle University – Nov 2025
- Introduction to Oracle Cloud Essentials – Oracle (online) – Nov 2025
- Mastering HCM: Oracle Fusion & Dayforce Essentials – Coursera (online) – Oct 2025
- Preparing Data for Analysis with Microsoft Excel – Microsoft (online) – May 2025
- SQL Performance Tuning – EDUCBA (online) – May 2025
- Oracle Database 10g: Programming PL/SQL & Advanced PL/SQL – E-SERV – Oct 2007
- ITIL Foundation Certificate in IT Service Management – PeopleCert – Sep 2017

Languages

- Spanish – Native
- English - Advance
