EDUCATION

University of California, Irvine

Bachelor's Degree in Computer Science and Engineering (GPA: 3.7)

Irvine, CA

Expected March 2026

TECHNICAL SKILLS

Data & Reporting: SQL, Excel, Tableau, Power BI, A/B Testing, Data Cleaning, Reporting Automation

Programming & Libraries: Python, R, Java, Javascript, Typescript, NumPy, Pandas, scikit-learn

Databases & Tools: PostgreSQL, MySQL, Oracle Database, Jupyter Notebook, Git, GitHub, Microsoft Office, Jira

Cloud & DevOps: AWS, Docker, Kubernetes, XML Data Parsing (SAX/DOM)

Relevant Coursework: Data Structures and Algorithms, Probability and Statistics, Introduction to Data Science, Statistical Methods for Data Analysis, Database Management, Data and Web Applications

WORK EXPERIENCE

Data Analyst Intern

June 2025 – Present

The Buku App

- Implemented Power BI dashboards integrating SQL and Excel data models to track engagement metrics across 20K+ marketplace listings, enabling real-time KPI monitoring for product and leadership teams.
- Conducted A/B testing on core interface workflows, increasing user engagement by 15% and conversion rates by 9% through data-driven UI iteration and funnel analysis.
- Developed automated ETL pipelines using Python and SQL to ingest, validate, and standardize 100% of user event-stream data, establishing a reliable analytics foundation for reporting, experimentation, and forecasting.
- Executed usability testing and KPI analysis across acquisition and checkout flows, increasing purchase conversion by 83% by translating behavioral insights into actionable design changes.

Coding Instructor

January 2024 – January 2025

Code Ninjas

- Taught daily lessons to 20+ students on game design and cross-platform programming using JavaScript and Unity.
- Led peer code reviews and developed reusable JavaScript components, improving instructor workflows by 30%.
- Collaborated with 7 instructors to revamp 10+ lesson plans and resolve recurring code issues.

Data Analyst Intern

July 2023 – September 2023

Carvil

- Engineered and normalized a MySQL product database supporting 10K+ SKUs, implementing schema constraints, validation logic, and foreign keys that reduced data-entry errors by 96% and improved analytical reliability.
- Streamlined recurring financial and inventory reports using Python, SQL, and Excel, eliminating manual processes and saving 18+ hours per week while increasing report consistency.
- Refined ERP query performance through SQL optimization and index tuning, reducing query latency by 70% and accelerating access to operational insights.
- Partnered with finance and operations teams to align pricing and forecasting models, improving metric consistency and confidence in strategic planning decisions.

PROJECTS

Credit Card Fraud Detector | <https://github.com/sabrinagianni/fraud-detector>

- Tech Stack: Python, Pandas, NumPy, scikit-learn, Pydantic, FastAPI, React, TypeScript
- Built an ML system to detect fraudulent credit card transactions, reaching 92% fraud detection accuracy.
- Transformed transaction data with Pandas and NumPy, applying target encoding and dimensionality reduction.
- Deployed a FastAPI backend for live inference and React and Typescript frontend to visualize fraud risk scores.

Fabflix Movie Database Web App | <https://github.com/sabrinagianni/fabflix-movie-database>

- Tech Stack: Java, MySQL, Tomcat, JavaScript, Docker, Kubernetes, AWS, REST API, Apache, HTML5, CSS3
- Built a full-stack movie database web app on AWS, letting users browse, search, and purchase from 50K+ records.
- Developed an ETL pipeline using SAX parsing to ingest and normalize 100K+ XML records into MySQL.
- Secured authentication with HTTPS, SHA-256, reCAPTCHA; mitigated SQL injection with PreparedStatements.
- Improved page load times by 55% and ensured 99.9% uptime via connection pooling, replication, and Kubernetes.
