

Rohan Rao Shenkarella

DATA ANALYST

Pennsylvania, USA | 551-888-0754 | Rohanrao2244@gmail.com | LinkedIn

SUMMARY

Data analyst with 3+ years of experience in extracting, integrating, and analyzing complex datasets from pharmacy management systems and financial claims databases. Proficient in Python, SQL, R, Excel, Tableau, and Power BI, with expertise in AWS and SQL databases. Skilled in implementing predictive models and machine learning to optimize inventory and drive revenue through targeted marketing.

SKILLS

Methodologies:	SDLC, Agile, Waterfall
Languages:	Python, R, SQL
IDEs:	Visual Studio Code, PyCharm, Jupyter Notebook
Packages:	NumPy, Pandas, Matplotlib, SciPy, Scikit-learn, TensorFlow, Seaborn, dplyr, ggplot2, Keras
Visualization Tools:	Tableau, Power BI, Advanced Excel (Pivot Tables, VLOOKUP)
Cloud Technology:	Amazon Web Services (AWS)
Database:	MySQL, SQL Server, PostgreSQL, MongoDB
Other Skills:	SSIS, SSRS, Machine Learning Algorithms, Probability distributions, Confidence Intervals, ANOVA, Hypothesis Testing, Regression Analysis, Linear Algebra, Advance Analytics, A/B Testing, Data Mining, Data Visualization, Data warehousing, Data transformation, Data Storytelling, Association rules, Clustering, Classification, Regression, A/B Testing, Forecasting & Modelling, Data Cleaning, Data Wrangling, Jira, Git, GitHub
Operating System:	Windows, Linux, Mac OS

EDUCATION

Master of Science in Computer Science – Rowan University, Glassboro, NJ

Bachelor of Technology in Computer Science & Engineering - Koneru Lakshmaiah University, Vijayawada, India

WORK EXPERIENCE

Data Analyst | Radian, PA

Aug 2023 – Present

- Utilized Pandas and NumPy libraries in Python to process and analyze 5TB of financial transaction data, improving data manipulation efficiency and reducing processing time for daily financial reconciliations.
- Created and maintained ETL pipelines using Python to clean, transform, and load transaction data into a centralized database, processing over 1 million financial records daily, ensuring data accuracy and integrity across multiple financial systems.
- Utilized advanced SQL queries to extract and aggregate relevant financial data from various databases (SQL Server, PostgreSQL), improving query performance by 60% and ensuring timely and accurate reporting.
- Developed financial forecasting models using Scikit-learn, achieving 85% accuracy in predicting future trends and asset performance for Radian's loan portfolio, allowing proactive risk management and strategic investment decisions.
- Implemented PySpark for big data processing, enabling large-scale financial data analysis and reducing computation time for risk assessments by 70%, allowing for real-time financial decision-making.
- Created interactive Power BI dashboards to visualize key performance indicators (KPIs) for internal stakeholders, reducing report generation time and enhancing decision-making across finance, risk, and compliance teams.
- Utilized AWS QuickSight for ad-hoc financial data exploration, enabling stakeholders to independently explore financial trends, reducing dependency on data analysts for routine reporting tasks and increasing data accessibility.
- Employed advanced Excel functions (VLOOKUP, INDEX-MATCH, pivot tables) to analyze and report on 50,000+ transaction records monthly, developing custom Excel macros using VBA to automate financial data reconciliation, saving 15 hours per week in manual reporting tasks.

Data Analyst | Deloitte, India

May 2020 – Aug 2022

- Executed data integration from diverse healthcare sources (EHRs, HL7, flat files, Oracle) for a healthcare client, employing ETL processes to increase data accessibility by 20% and improve integration efficiency across clinical systems.
- Implemented A/B testing methodologies to evaluate the effectiveness of different data analysis approaches in predicting patient outcomes, optimizing analytical processes and improving decision-making accuracy by 18%.
- Applied machine learning algorithms such as logistic regression, decision trees, and random forests using scikit-learn to predict patient outcomes, including readmission risk, treatment efficacy, and potential complications, achieving 85% accuracy.
- Created interactive Tableau dashboards and reports to visualize patient data, clinical performance, and operational KPIs, utilizing advanced features like calculated fields, dynamic filters, and custom visualizations, resulting in 30% increase in stakeholder engagement with healthcare data insights.
- Used complex SQL queries to merge & normalize data from various healthcare sources, ensuring consistency, accuracy for downstream analytics.
- Made data cleaning & preparation tasks using Alteryx's data transformation tools, reducing manual processing time & improving data accuracy.
- Implemented optimized data models using partitioning strategies based on time, location, and healthcare service types, achieving a 40% improvement in data loading and query processing performance while ensuring scalability for patient data analysis.
- Developed and implemented data transformation strategies for healthcare data, applying statistical analysis and data mining techniques to convert raw patient data into actionable insights, enhancing the organization's data-driven decision-making culture.
- Conducted in-depth exploratory data analysis (EDA) on complex healthcare datasets, utilizing statistical tools and visualization techniques to uncover patterns in patient care, treatment outcomes, and hospital operations, providing actionable insights aligned with business objectives.
