SUMMARY

Data Engineer with 3+ years of experience building batch and streaming data pipelines using Spark, Kafka, and Airflow across AWS and Azure environments. Strong background in ETL development, data modeling, cloud data platforms, and performance optimization. Experienced in building scalable data solutions to support analytics, reporting, and machine learning workflows.

EXPERIENCE

Data Engineer

Fifth Third Bank

January 2025 - Present, Kentwood, MI

- Developed batch and streaming data pipelines using Apache Spark and Kafka to support fraud analytics for 2M+ transactions per day.
- Implemented ETL/ELT workflows within AWS-based data lake environments for structured financial data ingestion and transformation.
- Designed dimensional data models and curated datasets to support analytics, reporting, and machine learning workflows.
- Optimized Spark jobs and SQL queries, reducing processing latency by 35%.
- Built data validation and data quality frameworks to ensure PCI-compliant data governance.
- Orchestrated workflows using Apache Airflow and integrated pipelines with AWS services (S3, EMR, Lambda).

Data Engineer

Elevance Health

June 2024 - December 2024, Atlanta, GA

- Built scalable ETL pipelines using Azure Databricks and Spark to process 5M+ healthcare claims per month.
- Designed schema definitions and structured datasets to support data warehousing and analytics use cases.
- Implemented HIPAA-compliant data governance and encryption within Azure cloud environments.
- Performed SQL development and performance tuning, accelerating data preparation workflows by 30%.
- Managed batch processing workflows within a cloud data platform.

Associate Data Engineer

ValueLabs

June 2021 - July 2023, Hyderabad, India

- Developed ETL workflows to ingest and transform enterprise data into relational databases and data warehouse systems.
- Automated data ingestion and transformation processes, reducing manual effort by 40%.
- Optimized SQL queries and Spark transformations, improving performance by 25%.
- Implemented monitoring and logging to enhance data reliability and production stability.
- Supported CI/CD deployment processes for data pipeline updates.

SKILLS

- Languages: Python, SQL
- Data Engineering: ETL, ELT, Data Modeling, Data Warehousing, Batch & Streaming Processing
- Big Data: Apache Spark, PySpark, Kafka, Databricks
- Cloud Platforms: AWS (S3, EMR, Lambda, RDS), Azure (Databricks, AKS)
- Databases: PostgreSQL, MySQL, MongoDB
- DevOps & Monitoring: Docker, Kubernetes, CI/CD, Prometheus, Grafana

EDUCATION

Master of Science, Computer Science

California State University, San Bernardino • San Bernardino • 2025 • 3.86

PROJECT

Real-Time E-Commerce Streaming Data Platform

- Designed a streaming data pipeline using Apache Kafka and Spark Streaming to process simulated user events.
- Implemented ETL workflows and session-based aggregations for behavioral analytics.
- Orchestrated batch and streaming workflows using Apache Airflow.
- Stored processed data in AWS S3 and PostgreSQL for analytics and dashboard consumption.
- Implemented monitoring and logging to track pipeline health.
