PROFESSIONAL SUMMARY

4+ years experienced, results-driven Data Scientist proficient in building end-to-end solutions, predictive models, analyzing large datasets, and communicating insights to diverse stakeholders. Proven track record of optimizing business problems, delivering measurable impact, and contributing to mission-critical decision-making.

TECHNICAL SKILLS

Core: Python, SQL, Matlab, Snowflake, BigQuery, Tableau, Looker, Airflow, Git, AWS, Linux, Java, C/C++, R

Machine Learning & AI: LangChain, LLMs, Causal Analysis, Time Series forecasting, A/B Testing, MLOps

Frameworks & Packages: Pandas, NumPy, TensorFlow, PyTorch, Keras, Scikit-learn, OpenCV, Jax, Cuda

Data Engineering: ETL/ELT, Hadoop, Spark, Kafka, Hive, Docker, Kubernetes, Neo4j, Azure, GCP, JIRA

WORK EXPERIENCE

JerseySTEM

Dec 2023 - present

Data Scientist

- Designed and managed **ETL processes** using advanced **SQL** techniques (window functions, CTEs) to ensure data accuracy and integrity for **HR data analysis**.
- Automated data validation and cleansing with **Python and SQL**, reducing processing time by 30%. Utilized Pytest framework to design and execute comprehensive test suites.

Abbott Labs

May 2022 – Dec 2022

Data Scientist

- Collaborated cross-functionally with **10+ engineers** to build and deploy **Convolutional Neural Network Image segmentation model** in **Python** achieving **90% accuracy** in image segmentation. Resulted in a **25%** increase in **disease morphology identification**, contributing to **\$500,000** in quarterly revenue.
- Streamlined operations by automating manual tasks with machine learning, saving **testing team 120+ hours** per month, **\$150,000** testing budget **quarterly** for identifying potential anomalies in the software.
- Devised logic to calculate **6** statistical metrics for **8** computer vision morphology detection algorithms using Python, OpenCV optimized legacy code, refactoring old code to improve performance by **70%**

Hackathon Winners – Integrated U-net Deep Learning Model to classify plaque accumulation in an internal application.

Ernst & Young

Jan 2019 - Jul 2021

Data Scientist

- Created a real-time dashboard with **20+ KPI metrics**, saving **40 hours** of engineer's time weekly to track performance of Machine Learning models in production and development.
- Developed **ELT pipelines** for incremental transformation of **800M+** rows of streaming data using **AWS Glue, SQL**.
- Improved **CLTV** by **22%**, resulting in **20%** growth in revenue, **12%** increase in customer retention.
- Formulated frameworks of **A/B Testing** for **4 clients**, saving **\$12000** monthly through statistical experiments.

Machine Learning Engineer

- Designed **end-to-end deployment** pipeline of ML model using **AWS Sagemaker, CLI, Git, Docker, Snowflake**.
- Analyzed trends and patterns in data and extracted **actionable business insights** by communicating results to **5 cross-functional stakeholders** with **3 Tableau dashboards** for monitoring **10+** models in production.
- Engaged in the creation of an **Anomaly Detection** tool that leverages **time-series data** to forecast anomalies.
- Built batch, stream processing data pipelines utilizing **Google BigQuery** and is shown on the **Looker** Dashboard.

PROJECTS

Apparel Recommendation System | Python, VGG16, Pinecone

- Utilized the Fashion MNIST dataset implementing **vector databases Pinecone & Weviate** to develop image search recommendation systems, optimizing cosine similarity calculations and processing over **50,000** images.

EDUCATION

Northeastern University

Boston, MA

Master of Science, Information Systems, Data Science

Aug 2023

Coursework: Machine Learning, Natural Language Processing, Deep Learning, AWS Cloud, Information Retrieval

Teaching Assistant: Big Data Systems Application Development, Algorithmic Marketing
