SUMMARY

Results-driven **Data Analyst** with **5+ years** of experience in **data analysis**, **business intelligence**, and **data engineering**. Proficient in **Python (Pandas, NumPy, Scikit-learn)**, **SQL**, **Excel**, and **Power BI**, with a proven track record of automating **30+ workflows** and improving reporting efficiency by **40%**. Experienced in **ETL pipeline** development, **data wrangling**, and **data modeling** to provide actionable insights. Expertise in statistical analysis, **A/B testing**, and forecasting, delivering **data-driven decisions** that increased revenue by **15%**. Strong background in leveraging **AWS** and **Snowflake** for scalable solutions. **Actively seeking opportunities** to apply data analytics expertise to enhance business strategies and operational efficiency.

AWARDS, RECOGNITION, CERTIFICATIONS

- [IBM Data Science Professional Certificate](#)
- [Machine Learning Master by iNeuron](#)
- Google Advanced Data Analytics Professional Certificate - (in progress)

Associated with Equinix

- Received **Magical Mention Award** (x5), recognized multiple times for outstanding performance, cross-functional collaboration, and timely delivery of high-impact analytics solutions.

WORK EXPERIENCE

EQUINIX

Remote, USA

Data Analyst

Mar 2024 - Apr 2025

Delivered data-driven insights as part of the Data & Analytics team, supporting Go-to-Market and Revenue Operations teams to enhance service delivery and drive operational efficiency

Project 1: Designed and deployed an inbox automation system using Python, Smartsheet, and Tableau to send scheduled dashboard snapshots based on user-selected time, filters, and dashboards—increasing reporting efficiency and dashboard **usage by 35%**.

- Created a flexible setup using Smartsheet to let users choose which dashboards they want to receive, how often, and with what filters, making the system easy to manage without coding
- Expert in crafting high-performance, complex **SQL queries** for data extraction, transformation, and analysis across large-scale, relational databases—optimizing queries for speed and efficiency to drive actionable business insights
- Proficient in **Python**, with strong experience in building, training, and deploying machine learning models using leading frameworks such as **scikit-learn**, **TensorFlow**, and **PyTorch**
- Advanced proficiency in **Power BI** for developing interactive dashboards and insightful reports, with a strong focus on DAX, data modeling, and storytelling for executive-level decision-making
- Designed and developed dynamic, interactive dashboards in **Tableau**, transforming complex datasets into actionable insights that led to a 25% improvement in decision-making efficiency across departments
- Built a backend process that takes live snapshots from **Tableau** dashboards and includes them in emails with helpful titles and summaries, making reports more useful and saving teams from manual work

Project 2: We had many dashboards with confusing and conflicting UIs. We reorganized and standardized the dashboard with Standardized Tableau dashboards by implementing consistent templates for headers, footers, and layout, enhancing usability and driving a 40% increase in user engagement.

- Analyzed and optimized **SQL** queries powering **Tableau** visualizations by minimizing joins, applying filters at the source, and leveraging indexed fields—reducing dashboard load time from 50 to 10 seconds and improving the user experience
- Consolidated redundant filters, unified naming conventions, and categorized key metrics—reducing navigation time and helping users find insights faster across all dashboards

Project 3: Created a scalable and reusable data model by consolidating data from Salesforce (SFDC) and gathering stakeholder requirements to build the New Logos dashboard in Tableau, enhancing acquisition visibility and contributing to a 20% YoY increase in new logo growth

- Collaborated closely with cross-functional stakeholders to identify key business metrics and reporting gaps, ensuring the data model aligned with strategic goals and supported future expansion
- Implemented efficient joins, filters, and hierarchies in the data model to support multiple dashboards with minimal redundancy, reducing data refresh times by **30%** and streamlining performance

Other Duties

- Conducted ad-hoc revenue analysis using **Python** and **Excel** to investigate data discrepancies, identifying root causes and delivering corrected insights that empowered sales leaders to better track territory performance and revenue trends
- Collaborated with cross-functional teams to develop and deploy a regression model in Python that reduced forecast error in resource utilization by **20%**, optimizing schedule tracking by **40%**
- Implemented data quality checks on the data model and database, improving reporting accuracy by 30% and reducing rework through schema validation and cross-source reconciliation.
- Designed and implemented an error removal tool on Excel to reduce time spent on data transfer by 25%
- Leveraged **JIRA** to track project progress & maintained extensive documentation on Confluence pages
- Designed an internal UAT process for reports and provided training to key users, leading to **30%** fewer change requests in the reports and a higher number of active report users

EQUINIX

Data and Analytics Intern – Data Science

Texas, USA

Jun 2023 - Dec 2023

Project – Churnlytics

Developed Churnlytics, a predictive analytics model to identify customers likely to churn in the next four quarters, enabling proactive retention strategies and improving customer lifetime value.

- Implemented Python code to reduce features from 625 to 330 in a churn prediction model by applying statistical techniques, including Pearson Correlation and variance thresholding. Successfully streamlined the model while maintaining the same precision and improving interpretability and performance.
- Performed feature engineering using **Python** by creating derived features from existing features, which improved the model precision by 3%
- Engineered a reusable data quality check script using Python to compare two datasets and identify features and category-level drift. Generated a text report and visualized drift percentages in a Tableau dashboard, helping teams identify significant data shifts. This solution reduced manual effort in data quality checks by nearly **70%**.
- Integrated churn prediction outputs with marketing segmentation strategies to prioritize high-risk customers, enabling targeted outreach campaigns that led to a 12% increase in retention among the flagged segments.

UNIVERSITY OF TEXAS AT ARLINGTON

Data Analyst (Performance)

Texas, USA

Aug 2022 - May 2023

Improve performance and adoption of over 10 Tableau dashboards across various departments and brands by reducing load times and optimizing backend systems.

- Analyzed and optimized **SQL** queries powering Tableau visualizations by minimizing joins, applying filters at the source, and leveraging indexed fields—reducing dashboard load time from 50 to 10 seconds and improving the user experience.
- Optimized the data model, eliminating redundant tables and ensuring normalized structures, resulting in a 30% reduction in data processing time.
- Implemented Tableau caching strategies and optimized extract refresh schedules to improve real-time access without overloading the server.
- Enhanced backend performance by indexing high-usage columns, tuning SQL views, and restructuring stored procedures, reducing query execution time by 50%.
- Collaborated with stakeholders to identify underused dashboards and consolidated them into fewer high-impact, user-friendly views, improving usability and increasing adoption.
- Consolidated and cleaned up dashboards, reducing the total number by 35% while maintaining full functional coverage, leading to simplified access and better insights for end users

Automated KPI reporting and streamlined dashboard processes through Python and SQL automation, improving reporting accuracy and enabling continued client engagement with more efficient, data-driven insights.

Project 1: *Collaborated during the transition from Siebel to Salesforce by performing cross-system data validation to eliminate duplicates. Conducted in-depth analysis to clean outdated, inactive, or non-existent leads, and identified high-potential (hot) leads to support SDRs in preparing for client meetings.*

- Performed data validation across Salesforce and Siebel systems, resolving inconsistencies, aligning metrics, and enhancing dashboard performance and data accuracy by 20%.
- Automated the monthly New Logos sales reporting process using Python, SQL, and Excel, eliminating manual workflows and ensuring consistently refreshed, accurate reports with minimal overhead.
- Cleaned, structured, and standardized raw operational data from multiple sources, including Excel, SFDC, and Siebel. Built reusable Python scripts for data wrangling and anomaly detection, forming a reliable foundation for reporting automation and dashboard development

Project 2: *The team previously calculated KPIs for test case management manually in Excel; I automated the entire process using Python, improving efficiency and accuracy.*

- Automated KPI calculation by developing Python scripts to extract and process data from Excel exports, reducing manual effort by **90%** and enabling faster, more accurate reporting for stakeholders.

Project 3: *Redesigned an underutilized sales dashboard from the ground up by gathering input from key stakeholders; post-launch, user engagement and adoption increased significantly, improving overall usability and business value.*

- Conducted **A/B testing** on legacy vs redesigned dashboards by analyzing usage and engagement metrics using **Python** and **Excel**, resulting in a 15% increase in user engagement and successful rollout of the updated dashboards

Firm Development Activities

- Developed industry-specific playbooks on cloud analytics & data governance, enhancing the firm's competitive positioning
- Mentored a management intern, leading to the successful completion of project deliverables & subsequent offers. Provided performance management and career guidance to 3 professionals, leading to their promotion within 2 quarters.
- Leveraged data analytics in the end-to-end client sales cycle to optimize proposal pricing, improving project margin by **8-10%**

HINDUSTAN AERONAUTICS LIMITED

Intern

Bengaluru, IND
Oct 2018 - Aug 2019

Predictive Maintenance Optimization for Aircraft Engine Components

- Analyzed over 1000+ aircraft engine logs to identify failure indicators; discovered components surpassed critical vibration (>5.0 mm/s) after 1350 hours. A 1300-hour preventive maintenance threshold should be recommended, reducing breakdowns and improving fleet readiness by 15%.

PROJECTS

Rideshare Service Database Dashboard - [link](#) (MySQL, Database management)

- Designed and developed a MySQL database for a rideshare service like Via, utilizing requirement-gathering and implementing relationship diagrams, including Logical Diagram, Entity-Relationship Diagram, and Enhanced ER Diagram.
- Generated and executed DDL/DML commands for the database, constructing a front-end application to interface with the backend database.

Pre-Owned Cars Price Estimation - [link](#) (Python, Machine Learning, Pandas, Numpy, OpenCV)

- Programmed a machine learning model using Python and Random Forest Regressor to predict prices of pre-owned cars, achieving high accuracy by performing data cleaning, feature engineering, and model tuning.
- Optimized model performance through hyperparameter tuning using K-Fold cross-validation, achieving an R^2 score of 0.8502 on the test set

Detecting Abnormal Musculoskeletal Radiographs – [link](#) (Python, PyTorch, CNN, Transfer Learning)

- Programmed a machine learning model using Python and Random Forest Regressor to predict prices of pre-owned cars, achieving high accuracy by performing data cleaning, feature engineering, and model tuning.
- Optimized model performance through hyperparameter tuning using K-Fold cross-validation, achieving an R^2 score of 0.8502 on the test set

Sales Performance Analysis Dashboard (Python, SQL, Tableau)

- Analyzed 12 months of retail sales data using Python and SQL to uncover insights on revenue trends, profit margins, and performance across products, regions, and customer segments.
- Built an interactive Tableau dashboard with dynamic filters and drilldowns by region, category, and sales rep, enabling stakeholders to identify growth opportunities and improve forecasting accuracy.

Retail Sales Forecasting and Trend Analysis (Python, Pandas, AWS, Statsmodels, Seaborn, Excel)

- Extracted raw sales data from Amazon S3, performed complete ETL operations using Python and Pandas to clean, transform, and aggregate data, then loaded the processed data into an AWS RDS database.
- Performed detailed exploratory data analysis (EDA) with Seaborn and Excel charts to identify patterns, seasonality, and sales anomalies, presenting findings in a business-ready report for decision-makers.

SKILLS

- **Programming Languages:** Python (NumPy, Pandas, Matplotlib, Scikit-learn, PyTorch, Flask), SQL, R, C++
- **Cloud & Databases:** MySQL, Snowflake, MongoDB, Redshift, DynamoDB, Neo4j, S3, EC2, Airflow, Pentaho (kettle), Kafka, Glue, EMR, Hadoop, Pyspark, MapReduce, Hive, Cassandra, Sagemaker, GraphQL
- **Tools & Libraries:** Excel, PowerPoint, JIRA, Confluence, Git, Kubernetes, Docker, Jenkins – CI/CD, Postman API, Flask, Django, Ab Initio.
- **Data Visualization:** Tableau, PowerBI, Pentaho reports, Metabase, Quicksight
- **AI and Machine Learning:** Transformers, LLMs - finetuning and integration, Pinecone, Langchain, Supervised ML (Linear and Logistic Regression, Decision Trees, RF, Xgboost, KNN, LDA), Unsupervised ML (K-means, PCA), NLP, Classification techniques (binary classification, multi-class classification), Statistical Analysis, Hypothesis Testing, A/B testing

EDUCATION

UNIVERSITY OF TEXAS AT ARLINGTON

MS in Data Science (GPA: 4/4)

Texas, USA

Jan 2022 - Dec 2023

DAYANANDA SAGAR COLLEGE OF ENGINEERING

B.E. in Electronics & Communication Engineering

Bengaluru, IND

Jul 2015 - May 2019
