PROFESSIONAL SUMMARY

- Full Stack developer with 5+ years of experience in developing, designing, and maintaining scalable applications in Healthcare, Insurance and Financial domains.
- Proficient in Java/J2EE technologies, including Core Java, Spring Boot, Spring MVC, Spring Security, Spring Cloud, Object-Oriented Programming concepts and Microservices.
- Strong expertise in RESTful and SOAP web services, API development, and API Gateway integration.
- Hands-on experience in Front-end development using HTML5, CSS3, JavaScript, TypeScript, Angular 7/8/9, React.js, Redux, Node.js, Bootstrap, and jQuery.
- Skilled in working with MEAN and MERN stack technologies for full-stack web application development.
- Proficient in AWS Cloud Services, including EC2, S3, RDS, Lambda, VPC, ELB, Elastic Beanstalk, and CloudFormation for deploying and managing cloud-native applications.
- Experienced in Relational Databases like Oracle, PostgreSQL, MySQL, and PL/SQL, along with NoSQL databases such as MongoDB and Cassandra.
- Expertise in JPA/Hibernate for ORM, along with writing complex SQL queries, Stored Procedures, Functions, Triggers, and Views.
- Practical experience in CI/CD pipelines and build tools such as Maven, Gradle, Jenkins, and Git, ensuring smooth code integration and deployment.
- Experience with Docker and containerized deployments, and asynchronous messaging using JMS, RabbitMQ, ActiveMQ, and Kafka.
- Knowledge of Camunda BPMN for workflow automation and business process management.
- Familiarity with Agile methodologies and participation in all Scrum ceremonies.
- Experience working in Onsite/Offshore delivery models, collaborating effectively with cross-functional teams.
- Skilled in various IDEs such as Eclipse, IntelliJ IDEA, Spring Tool Suite, and Visual Studio Code.
- Strong analytical and troubleshooting abilities, with excellent communication skills and a proactive approach to problem-solving.
- Adaptive to new technologies and environments, with a track record of leading development teams and delivering high-quality software solutions on time.

TECHNICAL SKILLS

Languages	Java (JDK 1.6/1.7/8/11/17), PL/SQL, C, C++, Python
-----------	--

Java APIs	J2EE, EJB, Servlets, JSP, JSTL, Custom Tag Libraries, JAX-RPC, JDBC, JNDI, JMS, JAXB, JUnit, Mockito, AWT, Spring MVC, Hibernate, Spring AOP, Spring DAO, Spring Core, Spring Security, Spring REST, Spring Boot, JPA, Log4j, Apache Kafka
UI Technologies	JSP, XML, HTML5, CSS3, AJAX, JSON, JavaScript, jQuery, Bootstrap, REACTJS, Angular 8/12/14, Node.js, NPM, Typescript, Express, AngularJS
Frameworks	Spring, Spring MVC, Spring Rest, Spring Boot, Spring Batch, Spring Security, Spring Integration, Spring DAO, Spring IOC, Hibernate, JDBC, Mean Stack, Apache Flink
Web/Application Servers	Apache Tomcat, WebSphere, WebLogic, JBoss
Databases	Oracle DB, MongoDB, PostgreSQL, MySQL, Cosmos DB
IDE's	Visual Studio Code, Eclipse, NetBeans, IntelliJ, IBM RAD, WSAD
Build & DevOps Tools	Maven, Gradle, ANT, Jenkins, GitLab CI, Kubernetes, Docker
Cloud Technologies	AWS – ECR, S3, ECS, EKS, EBS, ELS, Amazon SQS, RDS, CDN, Security Groups, S3 GCP – Google Kubernetes Engine, Cloud Storage, PCF AZURE- AKS, WebApps, Azure Functions, ARM
Version Control	GitLab, GitHub/GitHub Desktop, SVN, CVS, Clear Case, Bitbucket
Testing Tools / Others	JUnit, Postman, SOAPUI, Mockito, Graylog, log4j, Splunk, CloudWatch, JIRA, Pivotal Tracker, Dynatrace, Mocha, Jest, Protractor, Jasmine
Messaging Tools	JMS, Apache Kafka, RabbitMQ, Amazon SQS
Methodologies	Agile, Waterfall

PROFESSIONAL EXPERIENCE

Client: Northwestern Mutual, Princeton, NJ

Feb 2024-Present

Role: Senior Full Stack Developer

- Created a Single Page Application (SPA) for the Rewards section in the Client's Rewards department, utilizing Angular 11 and Redux for efficient state management.
- Actively participated in Agile practices contributing to sprint planning, daily stand-ups, and code reviews to ensure successful delivery of the project.

- Led the front-end development of complex forms and dynamic user interfaces, using HTML5, CSS3-SASS, JSON, and Angular to enhance user engagement.
- Upgraded the Angular version from 8 to 11, improving system performance and providing a smoother user experience.
- Implemented responsive design and dynamic data rendering, creating reusable components with Angular's templating and data binding for a seamless UI.
- Designed and developed RESTful APIs using Spring Boot, Spring JDBC, and Java 11, optimizing backend services for the SPA.
- Employed microservices architecture to handle high traffic volumes and ensure scalability, improving performance.
- Integrated Apache Kafka with Spring Boot for real-time event streaming and messaging capabilities, enhancing user interaction and application responsiveness.
- Deployed the application on AWS using Docker containers and Kubernetes for orchestration, ensuring efficient scaling and management of the application.
- Utilized AWS services like S3, API Gateway, CloudFront, and Lambda to store static assets and implement serverless backend logic.
- Implemented CI/CD pipelines using Jenkins, Docker, GitLab, and Kubernetes, automating deployment to AWS Cloud.
- Integrated Oracle database and optimized complex SQL queries (joins, subqueries, recursive queries), and PL/SQL stored procedures for backend data storage.
- Used Swagger for auto-generating documentation for REST APIs, enhancing API integration with frontend components.
- Wrote unit tests for Angular components using Jasmine and backend services with JUnit and Mockito, increasing code coverage and ensuring system reliability.
- Performed performance testing using JMeter, SoapUI, and Postman, ensuring the system's scalability and reliability under load.

Client: Nationwide

Role: Java Developer

Jan 2023-Jan 2024

Westfield Center, OH

Role: Full Stack Developer

- Designed and developed a dynamic Single-Page Application (SPA) using React and TypeScript for user-friendly claims submission and real-time claim status tracking.

- Led the transition of the web application to a stable state, fixing bugs and implementing enhancements for smooth revenue and sales data streaming using React.
- Implemented core functionalities and resolved critical issues using JavaScript, optimizing performance for real-time data processing.
- Utilized MySQL and HBase to handle high-volume production data, reducing API response time by 37% through optimized SQL queries.
- Contributed to backend development with Spring Boot, Spring MVC, and Spring Batch, enhancing API efficiency and scalability.
- Utilized MySQL and HBase to manage high-volume production data, designing and optimizing SQL queries to reduce API response time by 23%.
- Collaborated with cross-functional teams in an Agile environment, actively contributing to sprint planning and internal presentations.
- Developed and optimized secure RESTful web services, reducing latency by 15% through strategic code enhancements, significantly improving system performance.
- Applied object-oriented principles for backend design to ensure modularity and scalability in the claims management system.
- Worked closely with stakeholders to ensure smooth integration between frontend and backend components.
- Enhanced system performance by improving real-time data accuracy and streamlining the claims processing workflow.

Cigniti - India

Nov 2019-Nov 2021

Role: Software Engineer

- Developed and maintained a robust online ordering platform for a food delivery service, optimizing order tracking and returns within an Agile framework.
- Created a Single Page Application (SPA) using ReactJS 16.5, integrating various JavaScript frameworks and NPM components for seamless user experience.
- Built cloud-native microservices with Spring Boot, utilizing Java 8 features like Functional Interfaces, Lambda Expressions, Stream API for efficient bulk data processing.
- Developed RESTful APIs using Spring Boot, Spring Batch, Spring IOC, and Spring Integration, ensuring smooth backend and frontend interaction for order tracking.
- Employed CI/CD pipelines via Jenkins, automating deployment to Google Cloud Run, ensuring streamlined and scalable cloud-based operations.
- Integrated Behavior-Driven Development (BDD) using Cucumber, enhancing the testing process and ensuring alignment with business requirements.
- Wrote unit tests using JUnit, Mockito, and JEST, improving code reliability and achieving high test coverage.

- Conducted performance testing with SoapUI, Postman, and JMeter, ensuring the system could handle high volumes of orders and traffic.
- Utilized GitHub for version control, ensuring code consistency across the development team.
- Implemented logging using Log4j for efficient troubleshooting and enhanced system monitoring.
- Actively participated in Agile Scrum practices, contributing to daily standups, sprint planning, and retrospectives to meet business objectives.
