PROFESSIONAL SUMMARY

Full-stack Software Engineer with strong expertise in backend systems, test infrastructure, open-source platforms, and computer vision. Implemented a scalable plugin architecture for a production B2B marketplace, enabling 12 product verticals to share a common trust and checkout core while enforcing isolated data models through automated CI checks. Built an LLM-powered testing workflow by integrating AI agents with the Playwright MCP server to automate enterprise test generation.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, Java, C++, HTML/CSS, Bash

Frameworks & Libraries: Node.js, Flask, FastAPI, React, Next.js, React Native, SQLAlchemy, NumPy, OpenCV, Jest

Cloud & Infrastructure: PostgreSQL, MySQL, MongoDB, Redis, AWS (EC2, S3), Docker, Linux, Git, GitHub Actions (CI/CD), REST APIs, Cloudflare R2

AI-Tools: Agents (Claude Code, Codex, Copilot Agent, Rovodev), LLMs (Claude, ChatGPT, Gemini), & MCP servers

Practices: Agile/Scrum, Unit & Integration Testing (Playwright, pytest), OAuth 2.0/JWT Authentication, AI-Assisted workflows

PROFESSIONAL EXPERIENCE

Founder & Lead Engineer | *Full-Stack Development*

May 2026 – Present

[B2B Marketplace](#) (*cross-border trade, payments, & logistics*)

Remote

- Building a cross-border B2B trade marketplace using **Next.js frontend** and **Python/FastAPI + PostgreSQL backend**
- Built **AI features end-to-end**: multilingual message translation (4 languages), photo-based visual search, and AI-assisted listing creation, behind a swappable provider layer (Claude, Cohere) with automated tests
- Designed a plugin architecture letting 12 product verticals (vehicles, equipment, agriculture...) share one trust and checkout core while owning their own data models; boundaries enforced automatically in **CI**

Co-founder & Lead Engineer | *Full-Stack Development*

Feb 2026 – Present

[Berea Rides LLC](#)

Berea, KY

- Founded and beta-tested a community rideshare mobile app for a **1,600+** student campus, owning the full product lifecycle
- Engineered a geospatial route-overlap matching algorithm in **TypeScript** to pair passengers with driver routes
- Implemented secure user authentication (**JWT/OAuth 2.0**) and real-time ride-status updates

Software Engineering Intern | *Test Infrastructure & Internal Tooling*

Jun 2025 – Aug 2025

Morgan Stanley

Alpharetta, GA

- Designed and shipped a test-observability dashboard (**JS, Playwright**) surfacing results, logs, and failure screenshots
- Automated end-to-end tests using the Page **Object Model (POM)**, reaching **65%** coverage of critical workflows
- Built an autonomous test-generation workflow by integrating an **LLM agent** with the **Playwright MCP server**
- Integrated automated suites into the team's **CI/CD** pipeline, enabling test execution on every code change
- Cut manual QA effort by **~8 hours/day** by consolidating reporting and standardizing defect-triage workflows

Software Engineering Intern | *Full-Stack Development*

Jun 2024 – Aug 2024

Berea College Software Development Team (SSDT-CELTS)

Berea, KY

- Designed and deployed a full-stack app (**Flask, PostgreSQL, JavaScript**) to track community-service hours campus-wide
- Reduced reporting time by **30%**, API response time by **40%**, and raised user satisfaction by **25%** via schema redesign

Open-Source Software Engineering Intern

May 2024 – Jun 2024

[Runestone Academy](#) (*Python and Docker-based stack*)

Berea, KY

- Refactored database queries and optimized algorithms to enhance backend efficiency and frontend interactivity
- Focused on streamlining data retrieval processes and refining code logic for better performance
- Achieved a **20%** reduction in response times, significantly improving user experience and server performance

Software Engineering Intern, *Computer Vision Research*

May 2023 – Jul 2023

Berea College Computer Science Department

Berea, KY

- Built an object-detection pipeline in Python (**OpenCV, NumPy**) to identify and count celestial objects in astro-images
- Achieved **95% detection accuracy** across a 1000-image dataset and increased pipeline throughput by **30%**

EDUCATION

Berea College

B.A. in Computer & Information Science

Full Tuition Promise Scholarship

Berea, KY

Graduated May 2026

ACTIVITIES & LEADERSHIP

National Society of Black Engineers (NSBE), Berea College Chapter

May 2025 – May 2026

Chapter President

- Led a **70+** member chapter; directed the executive board, managed budgets, and built industry partnerships
- Directed the executive board by managing budgets, coordinating events, and building partnerships on campus and beyond
