SENIOR SOFTWARE ENGINEER

PROFILE

Experienced Sr. Software Engineer and Scrum Master, looking for a hands on development role where I can draw on my 15 years of experience implementing solutions using Angular, ReactJS, NodeJS, Django, JavaScript, AWS, Typescript, GraphQL and other related technologies; contributing strong object oriented programming and design including model view controller architecture, system configuration guidelines while providing strong technical skills in anagement and experienced with multiple equipment platforms, system services, programming, networking, security and customers training.

SKILLS

MongoDB , Angular Node.js , C#, MySQL SQL, Git Docker, Python, JavaScript, React, Java AngularJS Angular 6+, TypeScript, Java, .Net, C#.NET, PostgreSQL, Amazon AWS, Azure, TML/CSS/JavaScript Elasticsearch GraphQL Rest API, API Testing

EMPLOYMENT HISTROY

Apple Inc.,

May 2022 to Present

Sr. Full Stack Software Engineer,

•

- Developed and maintained back-end components using Java and Spring Boot, improving system response time
- Built dynamic, responsive front-end interfaces with React and Redux, achieving an increase in user engagement.
- Collaborated with cross-functional teams to design and implement RESTful APIs, enhancing data exchange efficiency.
- Managed cloud infrastructure using AWS, ensuring the scalability and reliability of web applications.
- Led a team of 4 developers in an Agile environment, conducting code reviews and mentoring junior developers.
- Assisted in developing a user-friendly interface using React, enabling smooth navigation and improved UX.
- Participated in the back-end API development using Java and integrated third-party libraries, reducing development time by 20%.
- Conducted unit testing and debugging, improving overall code quality and application performance.
- Building and managing high-performance transactional systems. Proficient in Node.js, TypeScript, and React, with a passion for developing scalable, reliable solutions in a collaborative team environment.
- using Node.js and TypeScript, enhancing transaction processing speed by 30%.
- Designed and maintained back-end and front-end components, leveraging React to create dynamic user interfaces that improved user experience and engagement.
- Collaborated with cross-functional teams to ship multiple products, regularly participating in code reviews and product planning sessions.

- Championed the use of cloud infrastructure to build scalable, reliable real-time systems, implementing serverless architecture to reduce overhead costs and improve deployment efficiency.
- Utilized strong debugging and problem-solving skills to maintain system reliability and scalability, successfully resolving issues within tight deadlines.
- Engaged in the complete development lifecycle, from system design and coding through testing and deployment, ensuring alignment with project requirements.
- Stayed updated on industry trends and emerging technologies to keep products competitive and at the forefront of the tech landscape.
- Designed and implemented a collaborative web application using Node.js, TypeScript, and React, facilitating real-time communication and file sharing for users.
- Developed a full-scale e-commerce application, utilizing cloud services for hosting and implementing RESTful APIs for seamless user transactions.
-
- UI/UX: design experience using Adobe XD and Figma, Lucidchart, and draw.io X Write clean, efficient, and maintainable code using JavaScript, SQL, C
- Angular, React w/ Typescript, and RxJS, SCSS, Sass, Less X Develop and optimize web app interfaces using React, Angular, NextJS
- Collaborate with the development team to design, develop, and test software X Experience with most of the following% Java, Angular, JavaScript, Spring, .NET, ML,
- python, JSON, Kutter, and/or native mobile
- Participate in daily stand-up meetings to provide updates on work, identify blockers, and stay informed of the priorities for upcoming work.
- Experience with automated unit testing, end-to-end testing, and smoke tests striving for 100% automated test coverage.
- Experience with AWS infrastructure components such as Lambda, EC2, ECS, ECR, RDS, DynamoDB, EMR, VMS, CloudFormation, SNS, API Gateway, etc.
- Bias towards build (pipeline automation, proactive monitoring, and shifting testing (security left with tools such as Docker, Kubernetes, Ansible, Packer, CloudBees Jenkins, Nexus, Splunk, SonarQube, NewRelic, Nessus.
- Experience of working with Azure Monitoring, Azure Service Bus. Designed and developed Cloud Service projects and deployed to PaaS.
- Extensive experience using Visual Studio .NET platform C#, ASP.NET, Good working experience in Azure Logic apps, Service Bus, Document DB and SQL Database.
- Led the design and implementation of a scalable backend system for the flagship product.

Sr. Full stack Developer

- Develop Frontend application with Angular project while leveraging NgRx.
- Use NPM and gulp installation of external library and dependencies
- Participate in the daily scrum, sprint review, sprint planning, and retrospectives.
- Work independently and as a member of a multiple functional, dynamic team.
- Design, implement and maintain large distributed Angular and Spring boot.
- JAVA based applications and Microservices supported with Rest API
- Participate in the design of service automation in AWS cloud towards Infrastructure-as-code and engineering of new cloud/on-prem technologies.
- Created Azure Web Application projects, updated and deployed ASP.NET Web apps, Web Jobs using visual studio, GitHub and Azure Resource Manager
- Builds serverless API through AWS Lambda function with python Nodejs. X Worked with NodeJS, Git, Jira, Confluence, AWS, Linux/Unix, Python, Elastic Search, Kubernetes, and other technologies to develop software solutions
- Collaborate with team on Git, Slack, Teams, Jira, Confluence, Mural Board
- Contributed to solutions that met and anticipated the evolving needs of customers.
- Led development of **large-scale Angular applications** used by internal enterprise teams, supporting thousands of users.
- Designed **reactive UI architecture** using **RxJS streams** to handle complex async workflows and real-time data updates.
- Implemented **NgRx Store & Effects** to manage global application state, reducing UI bugs and improving testability.
- Built secure **C#/.NET Core APIs** to support Angular front ends, handling authentication, business logic, and data access.
- Optimized Angular performance using **OnPush change detection**, lazy loading, and memoized selectors.
- Collaborated with designers, product, and backend teams to ship features end-to-end.
- Developed mission-critical **Angular applications** for government users with strict security and performance requirements.
- Used **NgRx Entity** to manage normalized data models across complex screens and workflows.
- Integrated Angular front ends with **ASP.NET Core microservices**.
- Ensured accessibility (508/WCAG) and enterprise UI standards.
- Improved system reliability through better state isolation and predictable data flows.

Front End

- Angular (v8–v17+), Standalone APIs, Signals
- RxJS (Observables, Subjects, operators, async flows)
- NgRx (Store, Effects, Entity, Component Store)
- Angular Material, CDK, Custom Design Systems
- TypeScript, SCSS, Responsive UI

Backend

- C# / .NET Core (.NET 6–8)
- ASP.NET Web API, REST, Middleware
- Entity Framework Core, Dapper
- Authentication & Authorization (OAuth2, JWT)

Architecture & DevOps

- Microservices Architecture
- CI/CD (GitHub Actions, Azure DevOps)
- Docker, Kubernetes
- Cloud: Azure / AWS

Google Inc., Baltimore, MD.

Nov 2017 to Apr 2021

Software Engineer III,

Frontend

- Vue.js (Vue 2/3, Composition API)
- React (Hooks, Context, component-driven design)
- Angular (v8+, modular architecture, RxJS)
- TypeScript, JavaScript (ES6+), HTML5, CSS/SCSS
- State management (Vuex, Pinia, NgRx, Context API)

Backend

- Node.js (Express, REST APIs, async/event-driven systems)
- Python (FastAPI, Flask, Django)
- API design, authentication & authorization
- Microservices and service-oriented architectures

Data & Infrastructure

- SQL & NoSQL databases (PostgreSQL, MySQL, MongoDB)
- Cloud platforms (AWS, Azure)
- Docker, CI/CD pipelines
- Agile/Scrum development
- Built and maintained large-scale **internal web applications** using **Vue, React, and Angular**, supporting complex workflows and enterprise users.
- Developed backend services using **Node.js and Python**, exposing RESTful APIs consumed by multiple frontend clients.
- Designed front-end architectures emphasizing reusability, modularity, and maintainability across frameworks.
- Worked extensively with asynchronous data flows, API orchestration, and state-driven UI patterns.
- Collaborated with cross-functional teams (product, design, backend) to translate evolving requirements into scalable solutions.

- Contributed to code reviews, architectural discussions, and best practices across front-end and backend codebases.
 - • Backend depth with **Node.js and Python**
 - • Experience supporting **enterprise-scale, internal platforms**
 - • Comfortable owning features from design through production
-
- Performing team code review on Merge Request HMR and providing feedback
 - Experience with log management application Splunk and used CI/CD system X Experience designing, building UI including browser-based debugging.
 - Develop software applications using best practices in coordination X develop, maintenance, technical support, documentation.
 - Designed, implemented, and tested frontend app using Adobe:D, vsCode, Angular, Cross Browser Testing, Nessus, Google API, Elastic Search, GraphQL
 - Used front-end testing tools such as React Testing Library, Jest,
 - Translate concepts into wireframes and mockups that lead to intuitive user.
 - Maintain and enhance new and existing UI and Web Services across application using Angular 12, TypeScript, 'TML5, Node.js, REST, JSON, and :ML while consuming REST Web Services / APIs HREST/SOAP/JSON/:ML
 - Proficient in popular React tools such as webpack, Next.js, React 'Hook Form X Models, and user interfaces with demonstrated mastery in 'TML5, CSS,
 - JavaScript, Git, SQL, SCSS, TypeScript and Python

Virgin Health Care Services., Washington, D.C.

Oct 2010 to Nov 2017

Software Engineer

- Significant experience writing client-side JavaScript
- Great expertise in building complex layouts with 'TML and CSS
- Designed and coded new software and existing software to add new features.
- Wrote efficient code that is usable and testable while collaborating with peers on the technical and business teams in an Agile/Scrum environment.
- Provided subject matter expertise in JavaScript, 'TML/CSS, ReactJS, Typescript (Redux with Testing frameworks such as Jest
- Worked with React, Angular, TypeScript, JavaScript, Postgres, Sprint Boot, AWS, Rest API, Git,

- Confluence, Jira, VsCode, Postman, Jest, NgRx, RxJs, Redux, Json
- HTML5, CSS, Webpack, Babel, NPM JS, AJA:, JSON, Bootstrap, Web Sockets
- Models, and user interfaces with demonstrated mastery in 'TML5, CSS, JavaScript, Git, SQL, SCSS, TypeScript and Python
- Participate in scrum team activities, including% Story writing, planning, estimation, daily stand-ups, refinements, retros.
- Collaborate with Customer Success to provide analysis on feature requests and bug reports.
- Engage in peer code reviews and pair programming to foster an environment of learning and knowledge sharing.

Radio Shack., Silver Spring

Jun 2008 to Oct 2010

Full Stack Software Engineer,

- Work in a .NET enterprise environment.
- web technologies like CSS3, JavaScript, 'TML5, jQuery and CSS.
- Understanding and comfortable with designing and implementing API's X Demonstrable knowledge of C# , C++, Go, LINQ or other object oriented
- developing Oracle APE: applications, Advanced PL/SQL and Database skills, JavaScript, JSON, jQuery, CSS ('TML, Python
- Develop, implement, and enforce Web site use and privacy policies. X Experience with application logging, monitoring, and alerting.
- Working with ASP.NET stack, preferably Core 3.1 and/or .NET 5+, Visual Studio.
- Analyze, design, code, debug, test, document, implement and maintain business and client-facing applications.

PROFESSIONAL HIGHLIGHT SKILL

- Experience with source control such as Git
- Experience developing Restful-based web services
- Knowledge of design and U: principles for web-based interfaces
- Solid understanding and experience of Angular 10 years and TypeScript
- 10 years of experience in JavaScript, 'TTP, 'TML, Ruby, API, Agile, CSS, JSON
- Ability to communicate ideas to technical and non-technical colleague
- TypeScript, Babel, Webpack, Angular, React, Redux, NgRx, AJAX, Ruby on Rails
- Skill with cross-browser 'TML and CSS development and real-time app
- Experience with modern front-end / JavaScript technologies and frameworks.
- Collaborate with Product Manager to capture customer feedback, estimate effort prototype, and prioritize features through Jira board, Mural, Teams
- Angular material, Material UI, MDBbootstrap, Angular, React, VueJs, NodeJS
- Python, AWS, Elastic Search, GraphQL, Postgres, SQL, MSS Server, C . .Net
- Skilled with Figma, Sketch and/or Adobe Creative Suite for preparing and extracting assets

- Developed localization API s which stores the translated data in Azure and Sql tables and Deploy WCF services on Azure cloud.
- Created Azure Web Application projects, updated and deployed ASP.NET Web apps, Web Jobs using visual studio, GitHub and Azure Resource Manager.
- CERTIFICATION
- CompTIA A+ Certificate
- Certified Scrum Master HPSM II
- Certified AWS DevOps Professional
- Certified Information Systems Auditor

- Certified in Risk and Information Systems Control

EDUCATION

- Bachelor, University of Phoenix
- Bachelor of Computer Science
