SUMMARY

DevOps engineer with one year of production infrastructure experience and an M.S. in Computer Science. Built and maintained CI/CD pipelines in GitHub Actions and Jenkins, managed Linux systems and Docker containers, and automated deployment workflows with Bash and Python on AWS.

PROFESSIONAL EXPERIENCE

Cloud & DevOps Intern | Techshed Technologies

Jun 2023 – May 2024

- Replaced ad hoc manual deployments with CI/CD pipelines in GitHub Actions and Jenkins across build, test, and deploy stages, cutting release time from 3 hours to under 45 minutes and eliminating 4 manual handoff steps per release.
- Provisioned EC2 instances behind the CI/CD pipeline using Terraform, moving infrastructure setup from manual console configuration to versioned, repeatable Infrastructure as Code.
- Redesigned IAM and VPC access controls across EC2, S3, CloudWatch, and ECR to enforce least privilege, closing 12 over-permissioned roles/security groups flagged in review.
- Held 98.5% uptime on production Linux systems through proactive patching and log-based root-cause analysis, catching issues before they reached users.
- Triaged and resolved roughly 15 P1–P4 incidents per quarter, cutting mean time to resolution by nearly a third through better runbook documentation.
- Replaced 5 recurring manual operations tasks with Bash/Python automation, saving an estimated 4–5 hours/week and removing a recurring source of human error.
- Built Prometheus and Grafana dashboards on top of the team's Docker/Kubernetes deployments, cutting time-to-detect for service degradation from 20 minutes to under 5.

PROJECTS

Skynet's Rover — IoT Telemetry Platform

Jan – May 2026

Python, FastAPI, PostgreSQL, Docker, GitHub Actions

- Designed and deployed a containerized telemetry service handling 10,000+ simulated records with sub-45ms API response times under local load testing, backed by PostgreSQL.
- Built a full CI/CD path in Docker and GitHub Actions that runs the test suite and produces a versioned image on every push, cutting release steps from a manual process to a single commit.
- Added AI-assisted log summarization (TinyLLaMA) with PostgreSQL-backed dashboards, surfacing anomalies across a distributed system faster than manual log review.

Deep Packet Inspection Engine — Network Traffic Analysis

Jan – May 2025

C++, multithreading

- Built a multithreaded inspection pipeline (2 load-balancer threads, 4 fast-path workers) classifying live traffic across HTTPS, DNS, and major web services in real time.
- Implemented rule-based filtering that blocked malicious/restricted packets while forwarding legitimate traffic, sustaining 2,000 packets/sec throughput.

EDUCATION

M.S., Computer Science | University of Hartford, CT

Aug 2024 – May 2026

B.Tech, Information Technology | DBATU, India

2020 – 2024

LANGUAGES & TECHNOLOGIES

Cloud & Infrastructure: AWS (EC2, S3, IAM, VPC, CloudWatch, ECR), Infrastructure as Code (Terraform), VM management, least-privilege security design

CI/CD & Automation: GitHub Actions, Jenkins, Git/GitHub, pipeline design, Bash & Python automation

Containers & Orchestration: Docker, Kubernetes, containerized deployments, Amazon ECR

Systems & Operations: Linux & Windows Server administration, patching, log analysis, incident response (P1–P4)

Monitoring & Observability: Prometheus, Grafana, Amazon CloudWatch, dashboarding & alerting

Databases: PostgreSQL, MySQL, MongoDB, Redis, SQL

Programming: Python, Bash, Java, JavaScript/TypeScript, C++, C

Practices: Agile/Scrum, SDLC, REST APIs
