SUMMARY

Data Analyst with 3+ years of experience delivering data-driven business solutions through advanced analytics, SQL, Python, Power BI, and modern BI platforms across financial services and enterprise environments. Specialized in transforming complex datasets into actionable insights, building scalable dashboards, optimizing ETL workflows, and developing KPI-driven reporting that improves operational efficiency and executive decision-making. Experienced in statistical analysis, forecasting, data modeling, and stakeholder collaboration, with a proven track record of driving process optimization, enhancing data quality, and enabling measurable business outcomes through scalable analytics solutions.

SKILLS

Data Analysis & Business Intelligence: Data Analysis, Business Intelligence, Exploratory Data Analysis (EDA), Data Visualization, Data Storytelling, KPI Development, Business Metrics Analysis, Trend Analysis, Root Cause Analysis

Programming & Query Languages: SQL, Python (Pandas, NumPy, Scikit-learn), R, DAX, Power Query

Data Visualization & Reporting: Power BI, Tableau, Microsoft Excel (Advanced Excel, Pivot Tables, Power Query, Power Pivot, Lookup Functions), Google Looker Studio

Databases & Data Platforms: PostgreSQL, MySQL, Databricks, Amazon Redshift, AWS S3, AWS RDS

Data Management & ETL: Data Cleaning, Data Validation, Data Wrangling, ETL Processes, Data Quality Management, Data Transformation, Data Integration, Data Modeling

Analytics & Statistical Techniques: Descriptive Analytics, Inferential Statistics, Hypothesis Testing, A/B Testing, Predictive Analytics, Forecasting, Feature Engineering, Model Evaluation

Business Analysis & Process Improvement: Requirements Gathering, Business Process Analysis, Gap Analysis, Workflow Automation, Process Optimization, BRD, Functional Specifications (FSD), Stakeholder Management

Tools & Methodologies: Jira, Confluence, Agile, Scrum, Microsoft Office Suite, Streamlit, Git

Cloud & Modern Analytics: AWS, Business Analytics, Self-Service BI, Dashboard Automation, Data Governance Fundamentals, AI-Assisted Analytics, Generative AI Fundamentals

EXPERIENCE

Morgan Stanley, CA | Data Analyst

Mar 2026 – Current

- Engineered interactive Power BI dashboards integrating SQL and Python-based analytics, enabling executive leadership to monitor 50+ KPIs and accelerating strategic decision-making by 31%.
- Optimized enterprise data pipelines using SQL, Databricks, and AWS, reducing data refresh cycles by 42% while improving reporting reliability across cross-functional business units.
- Leveraged statistical analysis, trend forecasting, and A/B testing to identify customer behavior patterns, driving process improvements that enhanced operational efficiency by 24%.
- Collaborated with business stakeholders to translate analytical requirements into scalable reporting solutions, decreasing report generation time by 55% and improving stakeholder adoption by 40%.

Tata Consultancy Services, India | Systems Engineer

Jul 2021 – Apr 2024

- Improved data accuracy and reporting reliability by implementing automated data validation and quality checks across integrated business datasets, reducing reporting errors and rework.
- Built and maintained SQL and Databricks-based data pipelines to consolidate structured data for BI dashboards and analytical use cases, enabling churn analysis, performance tracking, and operational insights.
- Developed Power BI dashboards and trend analyses to support workforce planning, capacity forecasting, and operational decision-making, helping stakeholders identify risks and optimization opportunities.
- Evaluated operational trends using statistical analysis and business metrics, uncovering optimization opportunities that reduced process bottlenecks by 28% and improved resource utilization.
- Delivered comprehensive BRDs, FSDs, and gap analyses for enterprise enhancement initiatives, contributing to successful project implementations with 98% user acceptance and stakeholder satisfaction.
- Acted as a liaison between business and technical teams by translating requirements into analytical solutions and supporting Agile delivery using Jira.

EDUCATION

Master of Science (M.S.) in Information Systems

May 2026

California State University, Long Beach, Long Beach, CA, USA

Projects

Smart Task Reminder

- Built a Power BI-based productivity analytics dashboard to track user focus, task completion patterns, and weekly performance metrics using DAX and Power Query.
- Delivered actionable insights through automated reports to support time management and data-driven productivity improvements.

FraudShield - Fraud Detection System

- Developed an end-to-end machine learning pipeline to identify fraudulent financial transactions using supervised learning techniques.
- Performed data preprocessing, feature analysis, model evaluation, and performance comparison to support fraud risk mitigation.
