EDUCATION

Katz School of Health and Science, Yeshiva University

Master of Science in Data Analytics and Visualization

New York, NY

Expected May 2025

Guru Nanak Institutions Technical Campus

Bachelor of Technology in Electronics and Communication

Hyderabad, India

Sep. 2020

EXPERIENCE

Data Analyst

Jan 2021 – Aug 2023

Artificial Penetration Software Solutions Pvt. Ltd., Hyderabad, India

- Led data analysis for the Finance Advisor platform—an interactive financial planning tool—by optimizing budgeting and investment features, resulting in a 18% increase in client engagement and improved decision-making.
- Collected, validated, and managed financial data from multiple sources to ensure high accuracy and database integrity, analyzing data trends to improve budgeting accuracy and investment strategies.
- Employed statistical models for risk assessment and scenario forecasting, uncovering patterns that helped refine budget management and investment approaches, leading to increased client engagement.
- Created and deployed interactive Power BI dashboards, improving client access to financial metrics and reducing decision-making time, while aligning data analytics with business goals.
- Streamlined reporting workflows through automation, reducing report preparation time by 18% and boosting team productivity.

PERSONAL PROJECTS

Customer Churn Prediction & Retention Dashboard | *Python, SQL, Power BI, Scikit-learn*

- Built a logistic regression model with 87% accuracy to predict churn using behavioral data.
- Developed SQL-powered Power BI dashboards to visualize churn risk by segment and region.
- Identified high-risk segments and projected 15% churn reduction with \$120K in retained revenue.

Sales Demand Forecasting & Inventory Insights Platform | *Python, ARIMA, PostgreSQL, Power BI*

- Built an ARIMA model to forecast monthly sales with 92% R^2 accuracy at the category level.
- Developed a Python-SQL ETL pipeline to automate sales data ingestion, cleaning, and transformation.
- Deployed Power BI dashboards that reduced stockouts by 18% and increased revenue by 13%.

Financial Transaction Anomaly Detection System | *Python, AWS S3, Isolation Forest, Power BI*

- Developed a real-time fraud detection engine using Isolation Forest to identify high-risk financial anomalies.
- Automated scalable data ingestion and preprocessing via Python and AWS S3 to enable low-latency detection.
- Reduced false positives by 24% and improved fraud response time by 30% through Power BI dashboards.

HR Analytics & Predictive Attrition Risk Monitoring | *Python, SQL, Power BI, Random Forest*

- Built a Random Forest model to predict employee attrition with 83% recall for proactive HR interventions.
- Designed Power BI dashboards to monitor attrition risk scores, performance metrics, and historical trends.
- Reduced turnover-related costs by 17% by enabling targeted retention strategies.

TECHNICAL SKILLS

Programming Languages: Python, SQL, DAX (Power BI), PySpark

Data Visualization: Matplotlib, Seaborn, Plotly, Power BI, Tableau, Looker, Excel

Machine Learning: Scikit-Learn, TensorFlow, Keras, PyTorch

Cloud Platforms: AWS (EC2, S3, RDS, Lambda, Redshift, SageMaker), Azure (ADF, Blob Storage, Databricks, Synapse)

Databases: MySQL, PostgreSQL, MongoDB

CERTIFICATIONS

Microsoft Certified: Power BI Data Analyst Associate

Microsoft Certified: Azure Data Fundamentals
