

# Sree B

(669) 251 - 8266 | sreebhargav1808@gmail.com | GitHub | LinkedIn | Open to relocate

## SUMMARY

Software Engineer with experience building scalable backend systems using Java, Golang, TypeScript, and Python. Strong in data structures, algorithms, and maintainable software development.

## EDUCATION

### University of Maryland Baltimore County

Master of Science in Computer Science

August 2023 – December 2025

### Amrita School Of Engineering

Bachelor of Engineering in Computer Science and Engineering

August 2019 – May 2023

## TECHNICAL SKILLS

- **Programming Languages:** Java, Python, JavaScript, TypeScript, SQL, Bash, Go
- **Frameworks and Tools:** Spring Boot, React, Node.js, Git, GitHub, Postman, JUnit, Mockito, Maven
- **Backend:** REST APIs, Microservices, API Design, System Design, PostgreSQL, MySQL, Redis, MongoDB, Kafka
- **Frontend:** React, TypeScript, JavaScript, HTML5, CSS3, Responsive Web Applications, Angular
- **Cloud and DevOps:** AWS, Docker, Kubernetes, Jenkins, GitHub Actions, CI/CD Pipelines, Production Deployment
- **Software Engineering Practices:** Agile, Scrum, Data Structures, Algorithms, Code Reviews, Unit Testing, Integration Testing, Debugging, Production Support

## WORK EXPERIENCE

### University of Maryland

AI Engineer - Internship

September 2025 – Present

- Developed a low-latency AI safety middleware fronting application LLM traffic, adding 0.9 ms p95 enforcement overhead (excluding model inference) using FastAPI, PostgreSQL, Docker, and gRPC.
- Implemented regex filters and RAG-based semantic checks that blocked 98% of sensitive inputs (API keys, PII, secrets) on a 1,000-prompt evaluation set, reducing policy-violation events by 90%.
- Deployed a containerized microservice stack scaling to 55,000+ prompts/hour with rolling updates and no downtime.

### Vosyn Inc. (Startup)

Software Engineer - Internship

April 2025 – September 2025

- Delivered 15+ Java Spring REST APIs with Hibernate in a microservices architecture backed by PostgreSQL, improving p95 latency 40% (250 ms to 150 ms) and accelerating reimbursements.
- Optimized PostgreSQL queries, indexes, and GCP Kubernetes autoscaling for backend services, improving p95 latency by 40% and reducing cloud cost by 20%.
- Owned a Node.js + DynamoDB timesheet service and release automation, cutting dev-to-prod lead time around 30%.

### University of Maryland Baltimore County

Software Engineer - Graduate Assistant - Computer Architecture

August 2024 – May 2025

- Owned a Java AWS Lambda workflow to automate feedback distribution for instructors, saving 2 hours/week.
- Improved lab file I/O performance by 25% through caching and I/O optimizations, reducing access latency by 30%.
- Led a 5-member TA team to standardize Agile workflows and CI/CD practices (Docker, TDD), introducing automated tests that reduced grading-system database query time by 20%.

### University of Maryland Baltimore County

Software Engineer - Research Assistant - Linear Quadratic State Estimation

August 2023 – August 2024

- Enhanced and evaluated a Python state-estimation pipeline for robotic control using constrained least squares and Kalman filtering, achieving 95% estimation accuracy under noisy sensor inputs.
- Reduced estimation error by 15% by tuning Kalman filter parameters via cross-validation and sensitivity analysis.
- Designed NumPy/MATLAB robustness tests with sinusoidal inputs and noise perturbations, improving reliability 10%.

## PROJECTS

### AgentPR (Open Source) – AI-Assisted Developer Productivity Platform (TypeScript, Node.js, GPT-4)

- Built a GenAI-powered PR automation platform using TypeScript, Node.js, GPT-4, LangChain, reducing manual review effort by 80% across 120+ pull requests.
- Implemented prompt-engineered review agents using structured LLM outputs, Jest, Semgrep to detect test gaps, security issues, lowering PR rework cycles by 35%.
- Automated CI/CD developer workflows using GitHub Actions, Docker, ESLint, monitoring hooks, improving security-check pass rate to 95% across production-adjacent builds.

### Social Media Platform (Full Stack, Java, Spring Boot, React, Kafka)

- Strengthened security by integrating JWT authentication and secure SDLC, reducing unauthorized access by 95%.
- Optimized media retrieval by developing Spring Boot microservices with Kafka, cutting server load by around 30%.
- Developed a Tableau analytics dashboard to track trends and boost engagement by 25% for better customer UX.

## CERTIFICATIONS

- AWS Certified Solutions Architect – Associate

February 2025
