SUMMARY

Data Analyst with 3 years of experience turning raw operational and transactional data into actionable insights through SQL, Python, and BI dashboards. Proven track record of improving reporting accuracy, cutting dashboard load times, and building predictive models across finance, healthcare, and consumer domains.

EDUCATION

Master of Science in Information Systems, Pace University 01/2023 – 12/2024 | New York City, NY
Coursework: Database Management Systems, Data Science (I & II: Data Mining), Location Analytics & Web GIS, Information Systems Design & Development, Information Security Auditing & Risk

Bachelor of Technology, JNTUA College of Engineering 06/2018 – 07/2022 | Kalikiri, India

TECHNICAL SKILLS

- **Data Engineering & Warehousing:** Snowflake, dbt (Data Build Tool), Star Schema / Dimensional Modeling, Medallion Architecture, ETL/ELT Pipelines
- **Data Analysis & Querying:** SQL (Advanced Window Functions, CTEs, Aggregations), Python (Pandas, NumPy, EDA), Excel, Statistical Modeling & Hypothesis Testing
- **Business Intelligence & Visualization:** Power BI, Tableau, Interactive Dashboarding, Pre-Aggregated Data Marts, Executive Reporting
- **Data Quality & Governance:** dbt Testing (Uniqueness, Referential Integrity), Source Freshness Monitoring, Data Lineage, Data Dictionaries
- **Domain Knowledge:** Wealth Management, Financial Asset Flows, AUM Retention Analytics, Client Engagement Metrics, Operational Reporting, Predictive Modeling & Market Trend Analysis

EXPERIENCES

- Morgan Stanley, Data Analyst** 01/2025 – Present | New York City, NY
- Architect and maintain Snowflake and dbt pipelines processing daily records across transactions, CRM logs, and holdings feeds into clean medallion layers.
 - Model a star schema covering regional AUM to drive executive visibility into asset flows, portfolio performance, and client retention.
 - Engineer pre-aggregated gold-layer data marts, cutting Power BI and Tableau dashboard load times by 45% for financial advisors.
 - Implement dbt automated testing and source freshness checks, maintaining 99%+ reporting data accuracy and strict regulatory governance.
 - Publish automated BI dashboards featuring regional rollups and daily scorecards to help account managers flag and retain at-risk accounts.

- Novo Nordisk Inc., Data & IT Intern** 04/2024 – 12/2024 | Plainsboro, NJ
- Analyzed operational records using Python and SQL to uncover workflow bottlenecks and optimize dataset cleanliness for leadership reporting.
 - Migrated legacy manual reports into centralized Power BI dashboards, saving business partners 10+ hours per week.
 - Authored data dictionaries and led training workshops for non-technical stakeholders to drive adoption of self-service analytics tools.

- DXC Technology, Data Analyst** 09/2021 – 12/2022 | Hyderabad, India
- Reconciled daily banking records across enterprise platforms to ensure data integration consistency and eliminate system discrepancies.
 - Automated recurring management reports via SQL and Excel, cutting monthly manual reporting effort by 30%.
 - Resolved technical support tickets with a 95% resolution rate, assisting users with reporting access and system troubleshooting.

PROJECTS

Athlete Management System (AMS) & Data Model Architecture

- Designed a relational database schema (ERD) and optimized SQL stored procedures with window functions across 50K+ performance metrics, improving query execution times by 35%.

DriveSmart: Predictive Car Evaluation Platform

- Engineered a predictive machine learning pipeline using engineered features (depreciation, mileage, TCO) to forecast vehicle resale values with 92% accuracy.

Supply Chain Network & Inventory Optimization

- Build time-series demand forecasting and safety stock models across multi-node supply chains, projecting a 15% reduction in holding costs and a 25% drop in stockouts.

Video Game Sales & Market Trend Analysis

- Conducted exploratory data analysis on historical video game sales records across global markets; engineered features and built an XGBoost regression model predicting total sales within 8% MAPE, outperforming a genre-average baseline by 40%.
