SUMMARY

Python Developer pursuing an M.S. in Computer and Information Sciences (UAB), with hands-on experience building REST APIs and backend services using Python (Flask, Django), SQL/relational databases, and full-stack web applications across healthcare research and enterprise settings.

EDUCATION

University of Alabama at Birmingham (UAB), Birmingham, AL <i>Master of Science in Computer and Information Sciences</i> GPA: 4.00	Aug 2024 – May 2026
QIS Institute of Technology, Ongole, India <i>Bachelor of Technology in Information Technology</i> GPA: 4.00	May 2018 – Jul 2022

SKILLS

Software Development: Python, Flask, Django, JavaScript, React.js, REST APIs, SQL (MySQL, SQLite, Snowflake, Databricks), Git/GitHub, GitHub Actions (CI/CD), GitHub Copilot, Docker

Cloud & Data Engineering: AWS, Databricks, Snowflake, ETL Pipelines, Data Modeling, SQLite, Jupyter Notebook

Visualization & Dashboards: Plotly Dash, Tableau, Power BI, Excel

AI & Machine Learning: Machine Learning, Scikit-learn, Computer Vision, DeepLabCut, Keypoint-MoSeq

Certifications: CS50's Introduction to Databases with SQL (Harvard/edX); Full Stack Web Development Bootcamp (Udemy, 2025); Python for Everyone (Udemy, 2021)

PROFESSIONAL EXPERIENCE

Research Technician, UAB – Radiation Oncology & Neurology, Birmingham, AL <i>Kinomics Data Analysis & Automation</i> <i>Radiation Oncology</i>	Jul 2026 – Present
--	---------------------------

- Process and analyze kinomics (peptide array) experimental data using Python to identify changes in kinase activity across experimental conditions.
- Develop Python-based data processing and automation pipelines that replace manual research workflows with reproducible, scalable software.
- Compare experimental samples and prepare processed data for kinase activity prediction and downstream bioinformatics analysis.

AI-Based Behavioral Analysis Pipeline | *Neurology*

- Develop an automated AI and computer vision pipeline in Python for analyzing behavioral videos in Parkinson's disease research.
- Apply DeepLabCut for pose estimation and automated tracking of mouse body movements across recorded sessions.
- Use Keypoint-MoSeq to analyze tracking data, identify recurring behavioral and movement patterns, and transform raw video into quantitative, reproducible results.

Computational Research Assistant, UAB Medicine, Birmingham, AL	Sep 2025 – Jan 2026
---	----------------------------

- Built Python ETL pipelines (Pandas, NumPy, Databricks, AWS) to process large-scale research datasets, with automated data validation and quality-checking steps that improved accuracy, consistency, and reliability for downstream analytical reporting.
- Built and maintained CI/CD workflows using GitHub Actions to automate testing and validation of Python-based ETL pipelines, reducing manual verification effort before deployment.
- Developed interactive Plotly Dash dashboards, enabling researchers to explore and interpret complex datasets 40% faster than prior static reports.
- Automated repetitive data workflows with Python scripts and built Scikit-learn predictive models to flag patterns and anomalies, cutting manual effort by ~30%.

Engineering Intern, ARD Logistics, Vance, AL	May 2025 – Aug 2025
---	----------------------------

- Designed and developed scalable, multi-tenant KPI dashboards using SQL, Python Flask, React, and JavaScript, serving isolated views across operations and supply chain business units and replacing legacy reporting systems.
- Built end-to-end ETL pipelines and a Flask/SQL-based digital training management system, writing automated validation and QA test scripts to verify data integrity across 5,000+ employee training records, with two-way trainer/trainee feedback tracking.
- Gathered reporting requirements from operations and supply chain stakeholders and performed database optimization and data validation to ensure reliable, accurate reporting.
- Received the Marsha Porter Excellence Service Award for outstanding contribution, innovation, and operational improvement.

Web Developer, Aspen Technologies, Hyderabad, India	Sep 2022 – Jul 2024
--	----------------------------

- Developed and maintained data-driven web applications and internal reporting platforms using Python (Django), JavaScript, React, HTML5, and CSS3, integrating REST APIs and MySQL databases for improved data accessibility.
- Translated business requirements into responsive BI interfaces and internal admin tools, improving enterprise data presentation and reducing manual data entry for cross-functional teams.
