

SUMANTH KARANI
Sr Azure Cloud/AWS cloud / DevOps Engineer/Build & Release Engineer /Linux Administrator
G-Mail:karanisumanth@gmail.com
Contact:505-633-6618

PROFESSIONAL SUMMARY

- Around 12+ years of experience as Azure DevOps, Build and Release Engineer, and Systems Engineer experience in IT Infrastructure.
- Experience in Azure Cloud, Azure Data Factory, Azure Data Lake Storage, Azure Synapse Analytics, Azure Analytical services, Azure Cosmos NO SQL DB, and Data bricks
- Experienced in AWS Cloud platform and its features which includes EC2, VPC, EBS, AMI, SNS, RDS, Cloud Watch, Cloud Trail, Cloud Formation, AWS Config, Autoscaling, Cloud Front, IAM, S3, and Route53.
- A team player with hands on IT expertise prioritizing CI/CD, Automation of Configuration Management, Security, Build/Release management, Cloud Resource Utilization, Infrastructure Automation etc.
- Experienced in AZURE and AWS Cloud IaaS platform with features EC2, VPC, ELB, Auto-Scaling, Security Groups, IAM, EBS, AMI, RDS, S3, SNS, SQS, Cloud Formation, Cloud and EKS.
- Managed IAM policies for organizations in AWS to define groups, create users, assign roles, and define rules for role-based access to AWS resources and created S3 buckets and managing policies for S3 buckets.
- Launched Amazon EC2 Cloud Instances using AWS services and configured the launched instances with the required specifications also defined the Security Groups which act as virtual firewalls that control the allowed traffic to reach the EC2 Instances and managed the Elastic load balancer, Auto Scaling, setting the security groups to design a fault tolerant and high available system.
- Fluent in several software lifecycle models, including Waterfall, SDLC, and Agile.
- Experience with the Azure logic apps with different triggers and worked on ISE environment in logic apps.
- Experience in managing Private Cloud and Hybrid cloud configurations, patterns, and practices in Windows Azure and SQL Azure and in Azure Web and Database deployments.
- Setting up continuous integration of applications in Apache Tomcat servers in EC2 using Jenkins plugins GIT, MAVEN. Implemented new deployment process with Jenkins 2.0 using groovy code.
- Proficient in automating build and configuration process using tools like ANT, Maven, Gradle, Jenkins/Bamboo and Puppet/Ansible.
- Experience in dealing with Windows Azure IaaS - Virtual Networks, Virtual Machines, Cloud Services, Resource Groups, Express Route, VPN, Load Balancing, Application Gateways, Auto-Scaling and Traffic Manager.
- Ability to create scripts using Azure PowerShell during for automation and build process.
- Support of application stacks from a mixture of technologies, including Apache, WebSphere, WebLogic, Tomcat, and JBoss.
- Expertise in WAMP (Windows, Apache, MYSQL, and Python) and LAMP (Linux, Apache, MySQL, and Python) Architecture.
- Experience on working with System health and performance Monitoring Tools like Nagios, Zabbix, Splunk, Cloud Watch, New Relic, Elasticsearch, Kibana, AppDynamics etc.
- Extensive experience in building & deploying EAR, WAR, JAR files on test, stage & production servers.
- Extensive experience using Visual Studio .NET platform C#, ASP.NET, Good working experience in Azure Logic apps, Service Bus, Document DB and SQL Database.
- Implemented AWS Redshift to manage data warehouse and running SQL queries.
- Create and maintain highly scalable and fault-tolerant multi-tier AWS and Azure environments spanning across multiple availability zones using Terraform and CloudFormation.
- Designed and implemented Terraform configuration files to deploy and manage infrastructure resources on multiple cloud platforms, such as Amazon Web Services (AWS), Microsoft Azure, and Google Cloud Platform (GCP).
- Used Terraform modules to create infrastructure templates that could be easily replicated across multiple environments, such as dev, test, and production.
- Developed custom Terraform providers to extend the functionality of Terraform and integrate with external systems, such as content management systems (CMS) and customer relationship management (CRM) platforms.

- Worked with Terraform state files to manage the lifecycle of infrastructure resources, including creation, modification, and deletion, to ensure consistency across environments.
- Implemented Terraform code to enforce security policies and compliance standards, such as identity and access management (IAM), encryption, and network security.
- Collaborated with cross-functional teams to develop and deploy Terraform code that met business requirements and delivered value to end-users.
- Optimized Terraform code for performance and scalability, using techniques such as resource grouping, parallelism, and caching.
- Participated in code reviews and provided feedback on Terraform code written by other team members, ensuring adherence to coding standards and best practices.
- Configured and maintained Jenkins to implement the CI/CD process and integrated the tool with Git, Maven, Nexus, Docker, Nagios, and Jira for end-to-end automation and took the sole responsibility to maintain the CI/CD Jenkins server.
- Experience in administrating of IAAS & PAAS VM's and Web roles on Microsoft Azure (Classic), Resource Manager and troubleshooting issues on Azure VM's. Supported technologies, such as Active Directory Federation Services (ADFS), Azure Active Directory (AD), and PowerShell.
- Hands on experience in cloud services, IaaS, worker/web role, service bus, azure blob, table storages, queue and API Management. Configured NSGs for two-tier and three-tier applications. Experience in integrating on premises servers to Azure Cloud.
- Proven ability in designing and creating test cases, automation frameworks using java, TESTNG, selenium web driver/ IDE, Grid, TestNG.
- Hands-on experience with DevOps tools like Chef, Puppet, Ansible, Docker, Jenkins, Prometheus, Grafana, Dynatrace, CloudWatch and AWS.
- Involved in design and deployment of applications using almost all AWS stack (Including EC2, S3, Route53, ELB, EBS, VPC, RDS, DynamoDB, SNS, SQS, IAM, KMS, Lambda, Kinesis) and focusing on high-availability, fault tolerance, auto-scaling in AWS Cloud Formation, deployment services and security practices (IAM, CloudWatch, CloudTrail).
- As DevSecOps I helped to bind the security and engineering departments together through collaboration, policies, and procedures.

TECHNICAL SKILLS

Systems Operating	Linux (Red Hat, CENTOS, Debian), Ubuntu, Mac OS, Windows.
Application Servers	WebLogic Application Server 9.x, 10.x, Apache, Ngnix.
Web Servers	Tomcat, APACHE 2.x, WebLogic (8/9/10), Web Sphere 4.0/5.0, Ngnix.
Build Tools	Maven, MS Build, and Node
CI/CD Tools	Azure Pipelines, Jenkins
Cloud Environments	AWS, Microsoft Azure, Google Cloud, OpenShift
Configuration Tools	Ansible, Terraform.
Orchestration Tools	Kubernetes, Docker
Networking Protocols	TCP/IP, DNS, Cisco Routers/Switches, SSP, HTTP
Virtualization Technologies	VMware ESXi, Windows Hyper-V, Virtual box.
Scripting	YAML, Power shell, Bash Shell scripting and Python
Version Control Tools	GIT, GitHub, Bitbucket, Azure repos.
Monitoring Tools	Nagios, Cloud Watch, Splunk, ELK.
Bug Tracking Tools	JIRA, Bugzilla, Azure boards & Service Now.

PROFESSIONAL EXPERIENCE

Experian, Costa Mesa, CA

Jul2022 - present

Sr Azure DevOps Engineer

Responsibilities:

- Design & implement migration strategies for traditional systems on Azure {Lift and shift/Azure migrate, other tools} worked on Azure SQL Database, Azure Data lake (ADLS), Azure data Factory (ADF)V2, Azure Service Bus, Azure App Service, Azure Data platform service.
- Created AZURE Function apps, Logic apps and power app to reduce complexity of code.
- Implementing Azure Logic Apps, Azure Functions, Azure Storage, and Service Bus Queues for large enterprise-level ERP Integration systems.
- Worked on Microsoft Azure Cloud (Public) to give IaaS support to customer. Make Virtual Machines through Power Shell Script and Azure Portal. Overseen and Created Storage Account and Affinity Group in Azure Portal.
- Dealt with Windows Azure IaaS - Virtual Networks, Virtual Machines, Cloud Services, Resource Groups, Express Route, Traffic Manager, VPN, Load Balancing, Application Gateways, Auto-Scaling. Exposed Virtual machines and cloud services in the VNets (Virtual Networks) to the Internet using Azure External Load Balancer.
- Involved in Azure infrastructure management (Azure Web Roles, Worker Roles, SQL Azure, Azure Storage, Azure AD Licenses). Provided high availability for IaaS VM's and PaaS instances for access from other services in the Vnet with Azure load balancers and implemented Azure classic and Azure ARM for deployment process.
- Configured the servers with the New Relic and Sumo logic monitoring and monitored the performance metrics of the production servers.
- Experience in architecting , developing and delivering solutions using the Azure Data Analytics platform including Azure Data Lake, Azure Databricks, Azure HDInsight, Azure Cosmos DB, Azure Data factory, Azure Logic Apps, Azure storage & Azure SQL Data Warehouse.
- Designed and developed user defined functions, stored procedures, triggers for CosmosDB.
- Integrated Azure AD authentication to every CosmosDB request sent and demoed feature to stakeholders.
- Design & implement end-to-end data solutions (storage, integration, processing, visualization) in Azure.
- Develop workload migration plan in conjunction with other technical teams.
- Performed migration of Microsoft SQL server to Azure SQL database.
- Responsible for upgrading of Microsoft Dynamics AX applications to latest versions.
- Responsible for Integrating VS2008 with MS Dynamics 2012 using Dynamics Business connector.NET/AIF, X++ and connected to external resources to query the data and developed custom WCF service.
- Knowledge of Microsoft Dynamics AX functionality, features, configuration and support.
- Defined and implemented monitoring processes for uptime, performance, and security for solutions deployed to the Microsoft Azure Cloud. Used ELK { Elasticsearch, Log stash, Kibana} for monitoring purposes for LOG analytics and Application monitoring and integrated this with Azure for security purpose we use search guard to protect the logs.
- Responsible to designing and deploying New ELK{ Elasticsearch, Log stash, Kibana} clusters.
- Design, Build and manage the ELK { Elasticsearch, Log stash, Kibana} clusters for centralized logging and search functionalities for the App.
- Written and maintained automated salt scripts for Elasticsearch, Log stash, Kibana and Beats.
- Created subscription, Storage Account and tables using Windows PowerShell using automation in Azure.
- Working with Azure Service Fabric, exclusively to create microservice application, used Stateful partitions scripting.
- Implemented Azure Kubernetes service to deploy a managed Kubernetes cluster in Azure and create an AKS cluster in the Azure portal, with the Azure CLI.
- Utilized Kubernetes for the runtime environment of the CI/CD system to build, test deploy. Used Kubernetes to orchestrate the deployment, scaling and management of Docker Containers.
- Used Helm charts to package and deploy common applications in Kubernetes.
- Worked on Docker-Compose, Docker-Machine to create Docker containers for Testing applications in the QA environment and automated the deployments.
- Worked on creation of Docker containers and Docker consoles for managing the application life cycle Knowledge on Docker Hub creating Docker images and handling multiple images primarily for middleware installations and domain configurations .
- Experience with Jenkins administration, backups, and plugins. Using master slave configuration maintained various jobs in Jenkins and supported development teams.

- Built upstream and downstream jobs in Jenkins to build and deploy onto different environments, worked with Jenkins CLI, manage plugins and Jenkins file.
- Developed Terraform modules for provisioning infrastructure resources such as virtual machines, storage accounts, and networking components in cloud-based environments such as Microsoft Azure.
- Created and maintained Terraform code for managing infrastructure as code, using Git for version control and continuous integration and delivery (CI/CD) pipelines for automated testing and deployment.
- Utilized Terraform best practices such as modularization, use of variables, and separation of concerns to improve code readability and maintainability.
- Integrated Terraform with other tools such as Ansible for configuration management, Kubernetes for container orchestration, or Jenkins for CI/CD workflows, to build end-to-end automation pipelines.
- Leveraged Terraform's infrastructure state management features to track changes to infrastructure resources over time and ensure consistency and reproducibility.
- Utilized Terraform's remote state management functionality to enable multiple users to work collaboratively on the same infrastructure codebase.
- Implemented Terraform code for managing infrastructure in multi-cloud environments, such as deploying resources across multiple cloud providers, or using hybrid cloud solutions.
- Written Templates for Azure Infrastructure as code using Terraform to build staging and production environments. Integrated Azure Log Analytics with Azure VMs for monitoring the log files, store them and track metrics and used Terraform as a tool, Managed different infrastructure resources Cloud, VMware, and Docker containers.
- Working with Terraform key features such as Infrastructure as code, Execution plans, Resource Graphs, Change Automation and using terraform for changing, and versioning infrastructure safely and efficiently.
- Automated infrastructure provisioning on Azure using Terraform and Ansible.
- Used Ansible to deploy applications on all servers through SSH. Gathered required configurations of all servers and maintain the playbooks updated using Ansible. Automated various infrastructure activities like Continuous Deployment and Application Server setup
- Performed code commit, revert, checkout and merge operations on GIT and pushed sourced code to GitHub.
- Defined dependencies and plugins in Maven pom.xml for various activities and integrated Maven with GIT to manage and deploy project related tags.
- Maintained and Debugged Code to meet the required standards by using SonarQube and used Selenium for testing purposes. Also, monitored system activities to optimize performance and ensure security of systems.
- Experience in Cybersecurity, by working with security team, to cast a wider net on relevant data
- Analyzing, designing and developing Extraction, Transformation and Load(ETL) processes for a data warehousing.
- Developing design document for ETL process.

Environment: Azure, Azure functions, Logic Apps, PCF, Office 365, Terraform, Maven, Jenkins, Azure ARM, Azure AD, Azure Site Recovery, Kubernetes, Python, Ruby, XML, Shell Scripting, PowerShell, Nexus, JFrog Artifactory, Jenkins, Git, Jira, GitHub, Ansible, Docker, Windows Server, TFS, VSTS, LDAP, Nagios.

FM Global, Rhode Island, United States

Feb 2020-Jun2022

AWS DevOps Engineer

Responsibilities:

- Expertise in AWS Cloud platform and its features which includes EC2, VPC, EBS, AMI, SNS, RDS, EBS, CloudWatch, Cloud Trail, CloudFormation AWS Configuration, Autoscaling, CloudFront, Lambda, IAM, S3, API Gateway Elastic Beanstalk, OpsWorks, Code Deploy, Version1, Code Pipeline and Route53.
- Design, integration and management of Amazon Web Services (AWS) cloud solutions. Provisioning of EC2 instances and integrated into local area offices in 5-time zones. Amazon RDS, VPC construction, Security Group policies, IAM, APIs, Route 53, CloudFormation, S3, Glacier, OpsWorks.
- Created, tested and deployed an End-to-End CI/CD pipeline for various applications using Jenkins as the main Integration server for Dev, QA, Staging, UAT and Prod Environments with methodology.
- Migrated 100+ TiB size PROD file systems from Intel luster to AWS FSx filesystem service (2018 nov launch).
- Utilized S3 bucket and Glacier for storage and backup on AWS.
- Used AWS Trusted Advisor service to analyze and suggest cost optimization opportunities for client workloads.

- SSL Security certificate management for enterprise, maintaining certificates across multiple ssl providers, and integrating certificates into products such as nginx, apache, tomcat, AWS-ELB.
- Used AWS Beanstalk for deploying and scaling web applications and services developed with PHP, Node.js, Python, Ruby, and Docker on familiar servers such as Apache, and IIS.
- Developed web-based open stack applications using python for large dataset analysis.
- Developed a Python script to load the CSV files into S3 buckets and created AWS S3 buckets, performed folder management in each bucket, managed logs and objects within each bucket.
- Extensively used regular expressions and core features in python using lambda, map, reduce etc and effectively implemented logging feature using python logging library and profiling using cProfile.
- Created Hive DDL on Parquet and Avro data files residing in both HDFS and S3 bucket.
- Created Airflow scheduling scripts in python to automate the process of sqooping wide range of data sets.
- Designed forms, modules, views, and templates using Python.
- Used Spark SQL with Python for creating data frames and performed transformations on data frames like adding schema manually, casting, joining data frames before storing them.
- Used PySpark to expose Spark API to Python.
- Good knowledge of S3 storage strategies such as versioning, life cycle policies, cross region replication and Glacier using command line interface (CLI) and Amazon Management Console Used Ansible to install software and automate installation.
- Automation and PowerShell, Ansible to automate processes in the AWS Cloud
- Extensive usage of Amazon Web Services (AWS) Virtual Private Cloud (VPC), Cloud Formation, Cloud Front, EC2, RDS, S3, Route53, SNS, SQS, Cloud Trail.
- Created data pipeline and ETL process to load Data from AWS S3 to RDS and redshift.
- Performed ETL Administration responsibilities for the enterprise Data using Informatica and also involved in writing Shell scripting for ETL JOBS to run.
- Deployed MySQL database on EKS in AWS using deployment for failover replica.
- Responsible to designing and deploying new ELK clusters (Elasticsearch, Logstash, Kibana, Beats, Kafka)
- Infrastructure design for ELK clusters.
- Created AWS Launch configurations based on customized AMI and use this launch configuration to configure auto scaling groups.
- Hands on experience with Spinnaker for Continuous Deployment with Kubernetes. And used OpenShift for container orchestration with Kubernetes, Container Storage, automation, to enhance container platform multi-tenancy.
- Used GITLAB pipelines to drive all micro services builds out to the Docker registry and then deployed to Kubernetes, Created Pods and managed using Kubernetes.
- Managed Kubernetes charts using Helm, and created reproducible builds of the Kubernetes applications, managed Kubernetes deployment and service files and managed releases of Helm packages.
- Worked on ECS and EKS deployment to an application on a Tomcat server hosted in containers using Terraform to create Infrastructure as Code.
- Worked on creation of custom Docker container images, tagging and pushing the images to the Docker repository for further use. Virtualized the servers on AWS, Linux and Windows using Docker, created the Docker file.
- Hands on experience with Docker containers to maintain Docker images, Docker hub & registries.
- Install Spark and integrate with other Big data ecosystems like HBase.
- Experience in spark ecosystems include Kafka, Cassandra, Spark streaming, SparkR and SparkSQL.
- Run and schedule the Spark script in EMR pipes.
- Created RDS DB instances using multi-AG deployments. Tested DB instance Failover using reboot with fail-over.
- Experience in MongoDB installation, patching, troubleshooting, performance, tracking/tuning, back-up and recovery in dynamic environments.
- Experience in managing large, shared MongoDB cluster.
- Extensive experience in deploying, managing, and developing MongoDB clusters.
- Install, configure, and manage informatica environments, including PowerCenter, Data Quality and Master Data Management.
- Collaborated with development and data teams to optimize data integration and data quality.
- Implemented security best practices for informatica environments and data stored within them.

- Automate the deployment of informatica workflows and mapping using CI/CD tools.
- Built end to end CI/CD Pipelines in Jenkins to retrieve code, compile applications, perform tests and push build artifacts to Nexus Artifactory and deploy them on the web servers.
- Installed and configured the Jenkins, Jenkins plugins, job setup, pipeline and delivery pipeline views and build automation using Jenkins server .
- Jenkins is Built on Docker container and the master controller Kubernetes controls pods. Designing and implementing Container orchestration systems with Docker Swarm and Kubernetes.
- Developed build workflows using Gradle, Gitlab-CI, Docker and Openshift.
- Upgrading current internal Gradle plugins for incorporating new features.
- Incorporated the code quality tools Sonarcube, Findbugs into Gradle Projects.
- Configured Gradle wrappers for all builds.
- Good experience on Linux Administration installing, configuring and troubleshooting websevers and application servers.

ENVIRONMENT: AWS EC2, S3, RDS, IAM, AMI, Redshift, Lambda, VPC, Git, Jenkins, Terraform, Python, Linux, Bash, Groovy, Subversion, Informatica, MongoDB, Rest API, Ant, Gradle, Nexus, U-deploy, SQL, Cloud Formation, Golang, OpenShift, Subversion, Selenium, UNIX, SVN, Docker, Jira, Python, Ruby, Shell Scripts, Tomcat, Ansible, Docker, Kubernetes.

DTCC, Dallas, TX

Dec-2018 – Jan 2020

DevOps Engineer

Responsibilities:

- Experience in Programming, support, debugging, and administration in distributed environments UNIX, Linux, VAX/VMS, Windows, and RDBMS across a wide range of products.
- Enabled Logging on S3 bucket access, VPC flow, CloudTrail, AWS configuration, IAM, AWS inspector, Lambda, RDS, DynamoDB, CloudFront, AWS API gateway, EC2 Application servers.
- Managed Amazon Web Services infrastructure with automation and configuration management tools such as CHEF and Jenkin CI/CD pipelines.
- Managed Maven project dependencies by creating parent-child relationships between projects.
- Performed S3 buckets creation, policies and on the IAM role based polices and customizing the JSON template
- Experienced with event-driven and scheduled AWS Lambda functions to trigger various AWS resources.
- Responsible for Continuous Integration and Continuous Delivery process implementation using Jenkins along with Python and Shell scripts to automate routine jobs.
- Hands on experience in using tools like Docker Compose, Kubernetes, etc. for orchestrating, linking and deploying the services related to the containers.
- Deploying and validating the applications automated through the Jenkins CI/CD pipeline using pipeline groovy script.
- Experience on working with System health and performance Monitoring Tools like Nagios, Zabbix, Splunk, Cloud Watch, New Relic, Elasticsearch, Kibana, AppDynamics etc.
- Enhanced, fixed functional and performance related bugs in core product written in GO (Go Lang).
- Used Chef to maintain and manage the existing infrastructure as well and by using ruby/yaml script. Created lot of recipes in cookbooks and bootstrapped the nodes with chef enterprise servers to store the data in the node.
- Written wrapper scripts to automate deployment of cookbooks on nodes and running the chef client on them in a Chef-Solo environment. Converting production support scripts to Chef recipes.
- Build and Maintained Docker container clusters managed by Kubernetes on GCP. Utilized Kubernetes and Docker for the runtime environment of the CI/CD system to build, test deploy.
- Involved in Configuring, automation and maintaining build and deployment CI/CD tools GIT/ Bit Bucket, Jira, Confluence, Bamboo, Build Forge, Docker registry/daemon, Nexus and JIRA for Multi-Environment (Local/POC/NON-PROD/PROD) with high degrees of standardization for both infrastructure and application stack automation (ECS) in AWS cloud platform.
- Perform Static Application Security Testing (SAST), manual code reviews on the code and Dynamic Application Security Testing (DAST) on the application to find the security vulnerabilities using the Veracode. These vulnerabilities are triaged, created ticket I jira, prioritized and got fixed from developers.
- Experience with Static Application Security Testing (SAST) tools like Veracode, HP Fortify.

- Worked on web application firewalls (WAF), AWS cloud security, Aqua Container Security.
- Implemented Aqua Container security platform (CSP) for compliance and runtime protection on GCP, integrated with its container services, as well as with GCP security command center.
- configured Aqua container security platform (CSP) with GKE to prevent unvetted containers from running, preventing approved containers from performing unauthorized operations.
- Expertise in JIRA/Confluence queries, dashboards for metrics reporting to various teams.
- Setup NFS servers as OpenShift storage backend and configured various storage claims for developers
- Currently leads an active integration effort for building out PaaS with Redhat OpenShift, Dockers and working with developers on application containerization effort.
- Implemented automated local user provisioning in instances created in OpenStack cloud through Chef.
- Developed build scripts using MAVEN as the build tool for the creation of (WAR files) build artifacts.
- Used ANT and MAVEN as a build tool on java projects for the development of build artifacts on the source code. Converting the ANT Build projects to Maven Build projects.
- Implemented some aspects of GCP Infrastructure IAM, Security, Logging, Networking, Infrastructure as Code (IaC) using Terraform, CI/CD infrastructure in few applications based on client needs in development, Sandbox and Non-production environment.

ENVIRONMENT: GCP, AWS EC2, S3, RDS, AMI, IAM, Redshift, Lambda, VPC, Java, Git, Jenkins, Terraform, Python, Linux, Bash, Groovy, Subversion, Rest API, Ant, Maven, Nexus, U-deploy, SQL, Cloud Formation, Golang, OpenShift, Cassandra, Subversion, Selenium, UNIX, SVN, Docker, Jira, Python, Ruby, Shell Scripts, Tomcat, Chef, Splunk.

Client: Centene Corporation – Auburn Hills, MI

Jul 2016– Nov 2018

Role: Build And Release Engineer

Responsibilities:

- Build and release software baselines, code merges, branch and label creation and interfaced between development and infrastructure.
- Implemented Subversion branching and merging operations for Java Source Code.
- Experience with build tools Ant and Maven for writing build.xmls and pom.xmls respectively.
- Experience in integrating Unit Tests and Code Quality Analysis Tools like JUnit, findbugs and Selenium.
- Experience in Configuring and deploying to Application servers Weblogic and Websphere.
- Hands on Experience in using Tomcat and Apache web servers for deployments and for hosting tools.
- Worked recently on tools migration from old tools like PVCS version control system to SVN, Tracker to Jira and finally CI tool Hudson to Jenkins.
- Partially worked as build tools administrator SVN, Jira, and Jenkins .
- Worked with Development Team Leads and testing teams to establish a build schedule, execute the builds and troubleshoot build failures, if any.
- Send releases to SID testing. Resolve issues before going into questionnaire. Drafting the documents for each release about the issues and the lessons learnt.
- Successfully managed concurrent deliverables on time and with quality within fast-paced environment and under deadlines.
- Coordinate with the Development Teams to receive the correct versions of re-usable and dependent components and with Environment team for issuing/installing successful builds.
- Create documents on build process and flow, build script maintenance, user guide for developers for local builds.
- Responsible for Defining Mapping parameters and variables and Session parameters according to the requirements and usage of workflow variables for triggering emails in QA and UAT environments.
- Extensively worked on Informatica Designer, Workflow Manager. Designed and migrated various reusable mappings and maplets in Mapping designer, sessions and workflows in Workflow manager to extract data from various sources like MainFrames, Flat files, SQL server, Oracle.
- Responsible for providing consolidated daily and weekly status reports to the management and team.
- Responsible for coordinating the Offshore and Onsite team and resolve all the issues faced by the team.
- Extensively used Power Exchange to create and migrate Datamaps from system level to Informatica servers.
- Used Hudson/Jenkins to perform automated Builds and Deployments

- Configurations, setup and building of interfaces and modifying the flow to give the opportunity for re-use scalability and functionality.
- Writing shell and Perl scripts for automated deployments especially in handling all the tasks before kicking off WSLT or WSADMIN scripts or admin console deployments.

Environment: JIRA, SVN, Apache ANT, XML, Maven, Jenkins, Apache Tomcat, Shell Script, Unix/Linux, Windows, Oracle.

Walmart - Bentonville, Arkansas

Sep 2013 to Jun 2016

Linux Administrator

Responsibilities:

- Installation of Web sphere, upgraded to service pack updates, installed IBM patches, configuring and creation new admin & managed servers, start & stop Web sphere server.
- Setting up network environments using TCP/IP, NIS, NFS, DNS, SNMP agents, DHCP and Proxy.
- Build Java Code, ASP.Net code, C# on to different servers as per the application.
- Using Bash Shell Scripting to schedule and automate processes including full and incremental backups using tar, crontab and snapshots, migrating and enlarging file system on Solaris 10 and Linux.
- Managed, installed, and configured Microsoft Windows Server, Red Hat Enterprise Linux, CentOS, Ubuntu, IIS, .NET, C# ,Apache, Red Hat JBoss, Apache Tomcat.
- Using C# documented code using a comment syntax that contains XML text.
- Used Java Servlets, JSPs, AJAX, HTML and CSS for developing the Web component of the application.
- Involved in the analysis, definition, design, implementation and deployment of full software development life-cycle (SDLC) of the project.
- Designed and implemented disaster recovery solutions for mission-critical applications, ensuring system availability and data integrity.
- Installed Red Hat Enterprise Linux 4 on Sun V40 servers. Installed and upgraded packages using YUM and RPM. Configured Red Hat Enterprise Linux Systems to auto update.
- Implemented automation scripts using Python and Bash to streamline system maintenance tasks and reduce manual errors.
- Monitored system performance and security, identified and resolved issues proactively, resulting in increased system uptime and user satisfaction.
- Managed day-to-day ticket resolution of Ubuntu Linux issues.
- Automated some jobs by deploying the CRON tool for job scheduling processes.
- Occasionally present performance reporting to the appropriate body. Basic bash scripting experience.
- Installed and upgraded packages using YUM and RPM.
- Involved in hardening, Linux Server and Compiling, Building and installing Apache Server from sources with minimum modules.
- Administration of UNIX servers like AIX and Sun Solaris in both test and production environment and applied patches.

Environment: RHEL 4.0., SSH, Telnet, Rlogin, Java, HTML, Bash shell scripting, , Apache Tomcat, Ubuntu, ASP.Net code, C#, Db2 Server, Windows 2003 and Windows 2008 servers.
