

VENKATA SUNDEEP GADDAM

330-798-2724 | gaddamvenkatasundeeep7@gmail.com | LinkedIn: linkedin.com/in/sundeepegaddam

Professional Summary

Dynamic and detail-oriented **Full Stack Developer** with over four years of experience designing, developing, and deploying robust applications. Proficient in cutting-edge technologies such as **Java, Spring Boot, Python, React**, and **PostgreSQL**, delivering scalable, user-focused solutions. Demonstrates a strong background in **API integration, cloud technologies**, and Agile methodologies. Known for exceptional problem-solving skills, efficient project management, and the ability to collaborate effectively across cross-functional teams.

Highlights:

- Expertise in **building RESTful APIs**, secure authentication mechanisms, and real-time applications.
 - Proven ability to optimize database performance and improve application response times.
 - Hands-on experience with **CI/CD pipelines**, automated testing, and performance tuning.
-

Education

Master of Science in Computer Science

Kent State University

Bachelor of Technology in Computer Science

KL University

Skills

- **Programming Languages:** Java, Python, C#, SQL, C
 - **Web Technologies:** HTML, CSS, JavaScript, AngularJS, React, Bootstrap, jQuery
 - **Frameworks:** Spring Boot, Flask, ASP.NET MVC, Entity Framework
 - **Database Technologies:** PostgreSQL, MySQL, Oracle, SQL Server
 - **Cloud Technologies:** AWS, Azure, GCP (familiarity)
 - **Version Control:** Git, GitHub
 - **Tools & Platforms:** Postman, Jenkins, Jira, Confluence, RDLC, Crystal Reports, DevExpress
 - **Development Methodologies:** Agile, Scrum
 - **Operating Systems:** Linux, Unix, Windows
-

Professional Experience

Full Stack Developer

Equifax – Remote | Jan 2024 – Present

Responsibilities:

- Involved in Design, Development, and implementation of business applications using Java/J2EE Technologies.
- Designed and developed the REST-based Microservices using Spring Boot.
- Configured Spring MVC Annotations to manage URL mapping with controllers for the communication between the front end and middle tier.
- Used Microservice architecture with Spring Boot-based services interacting through a combination of REST and Apache Kafka message brokers.
- Used Spring Core for IoC implemented using DI and developing Restful web services.
- Used Spring Boot Actuator to monitor and manage the application in the production environment.
- Configured Spring cache and Hibernate cache to avoid unnecessary database access.
- Implemented Spring Netflix Zuul API gateway and Eureka service registry for reverse proxy and Dynamic service discovery of APIs.
- Created dynamic schema design through NoSQL MongoDB by writing rich queries and achieved data in a collection to be distributed across multiple systems for horizontal scalability as data volumes increase through Sharing.
- Used Cassandra for storing internal statements and reports and worked in Development which includes updating and retrieving data internally from the back-end Cassandra.
- Developed multiple Angular 14.0 components that are compatible with the latest versions of typescript, angular CLI.

- Designed and developed efficient user Interaction screens using HTML5, CSS3, and Bootstrap CSS framework and media queries to create responsive web pages.
- Used Spring Controllers with AngularJS to route control to desired Java services.
- Implemented filters for user authentication and user authorization by Spring Security.
- Authenticated users to provide security to Restful web services using OAUTH 2.0.
- Worked with Jenkins to configure Continuous Integration and Continuous Deployment (CI/CD).
- Configured Kubernetes in the application for automating deployment, scaling, and management of containerized applications.
- Deployed Spring Boot based microservices in Docker container using Amazon EC2 container services and using AWS admin console.
- Used Git for version control and resolved conflicts related to merging of source code.
- Implemented AWS solutions using E2C, S3, RDS, EBS, Elastic Load Balancer, Auto scaling groups, Optimized volumes, and EC2 instances, and created monitors, alarms, and notifications for EC2 hosts using Cloud Watch.
- Implemented a 'serverless' architecture using API Gateway, Lambda, and DynamoDB and deployed AWS Lambda code from Amazon S3 buckets.
- Created a Lambda Deployment function and configured it to receive events from S3 bucket.
- Developed the applications following Agile Scrum, participated in daily stand-ups, sprint reviews, Kick-offs, and used Jira for project management.
- Performed Unit testing, Integration testing, and generating of test cases for web applications using JUnit, Log4J.
- Used Kafka streams as a message-bus and developed data pipelines to ingest data to NoSQL data-stores like Cassandra.

Environment: Java, Angular JS, J2EE, Git, Spring Boot, Hibernate, Core Java, Rest, Web Services, CSS, Cassandra, Eclipse RCP, SASS, JIRA, PostgreSQL, AWS, Kubernetes, Docker, OAUTH 2.0, Spring Cloud, Spring batch, PCF, Apache Kafka, JUnit, Maven, Jenkins.

Software Engineer

Mindtree Limited – Hyderabad, India | July 2019 – July 2022

Responsibilities:

- Developed Microservices using Spring MVC, Spring Boot, and Spring Cloud.
- Used Microservices architecture, with Spring Boot based services interacting through a combination of REST and Spring Boot.
- Used Spring Boot which is radically faster in building cloud Microservices and developing Spring based applications with minimal configuration.
- Developed application on Spring framework by utilizing its features like Spring Dependency injection, Spring Beans, Spring Security, Spring JPA, Spring AOP, Spring IoC, Spring Web flow using MVC.
- Used Spring Transactions in the application and developed Session beans for the business logic at the middle tier level.
- Worked with Spring Batch to convert files to database records using Quartz Scheduler.
- Used Spring Boot Actuator to externalize application configuration properties for different environments and RESTful web services using Spring Boot and Spring Rest.
- Implemented the Spring IoC for the core business application logic and used Hibernate as persistence framework.
- Worked on PL/SQL and created views, triggers, functions and stored procedures wherever necessary to improve the performance in MySQL database.
- Developed PL/SQL triggers and master tables for automatic creation of primary keys.
- Used Angular Reactive forms to implement complex forms and performed the validations using Form Builder.
- Used Angular Material components for developing the UI. Consumed RESTFUL web services using Angular HTTP Module and transformed the response using RXJS operators.
- Defined Angular routes using Router module for components at module level to enable lazy loading for modules and components.

- Developed CI/CD system with Jenkins on Kubernetes environment, utilized Kubernetes and Docker for the runtime environment for the CI/CD system to build, Test and Deploy.
- Configured and used JIRA for bug tracking and functional testing.
- Developed GIT controls to track and maintain the different versions of the project.
- Used AWS Lambda with Step Functions to build the event-driven architecture and set up Amazon RDS to host Oracle 12c.
- Deployed applications on AWS by using Elastic Beanstalk.
- Created AWS Lambda using java to perform event-driven processing.
- Participated in the application's requirement gathering, analysis, design, development, and testing utilizing the Agile process.
- Used JUnit framework for unit testing of application and Log4j to capture the log that includes runtime exceptions.
- Worked on Splunk to monitor the infrastructure implementation.
- Developed Kafka consumer's API in Scala for consuming data from Kafka topics.
- Used Kafka functionalities like distribution, partition, replicated commit log service for messaging systems by maintaining feeds.

Environment: Microservices, Spring boot, Restful webservice, PL/SQL, HTML5, CSS3, Angular, REST API, Load Balancer, MongoDB, REST administrations, Docker, SSO Authentication, Junit, Splunk, Kafka, Kubernetes, GIT, Jenkins, AWS Services, Elastic Cloud Compute (EC2).

Projects

Real-Time Payment System (*Master's Project*)

- Developed a scalable payment system using **Python, Flask, and React**.
- Integrated APIs for seamless payment processing and utilized AWS S3 for secure data storage.
- Conducted performance testing, reducing transaction response times by 20%.

Peer-to-Peer Digital Banking Solution (*Bachelor's Project*)

- Designed a secure **peer-to-peer payment application** using Java and Spring Boot.
- Ensured data integrity with PostgreSQL and enhanced user engagement with AngularJS-based UI.

Certifications

- AWS Certified Solutions Architect (Associate Level)
- Oracle Certified Professional: Java SE Programmer

Key Strengths

- Exceptional analytical and problem-solving skills, fostering innovation and efficiency.
- Proficient in cloud technologies and databases, ensuring reliability and scalability.
- Thrives in collaborative Agile teams, consistently exceeding project deliverables.
