Professional Summary

- Experience as a DevOps Engineer in the field of **Linux Administration, Infrastructure as Code, CI CD** and Cloud Platforms
- Hands on Experience Automating CICD Pipelines using **Jenkins** and **AWS CodePipeline**
- Strong Experience with **AWS** Services: **EC2, IAM, EBS, RDS, VPC, S3, CloudFront, CodePipeline, EKS, EDR**
- Experience with setting up of **Tibero** and **OpenFrame** servers
- Strong experience setting up **Apache, Nginx, Tomcat** servers for Website and Applications
- Proficient with networking protocols and cloud networking routing and firewalls like **Security Groups, NACL** and **WAF**
- Experienced on Setting up **Deployment Pipelines** to **EKS** using **Jenkins** and **GitLab Kubernetes Agents**
- Experience with setting up **CloudWatch Dashboards** for **monitoring** several AWS Services for Performance issues.
- Familiar with other monitoring tools like **New Relic**
- Worked on setting up and administering **GitHub** and **GitLab** repositories and **access management**
- Worked with **Python** and **Bash scripting** to automate cleanup tasks and reduce **cloud costs**
- Experienced in **Installation, Configuration** and **Patching of Packages** in **Linux** using **Yum** and **Apt**
- Experienced working in Agile and Scrum environments and
- Have excellent problem solving, time management skills, ability to work independently or as part of a team.

Professional Experience

Cloud DevOps Engineer

Disney (May 2020 - Present)

Responsibilities:

- DevOps Engineer with expertise on AWS Cloud, CI/CD, Infrastructure as Code and Kubernetes.
- Install, Configure and Maintain wordpress on AWS Ec2 and build reliable architecture on AWS using AWS services like VPC, Ec2, Autoscaling, RDS, ALB and Route53 and design disaster recovery
- Setup WebServers and host website using Ec2 and CloudFront
- Deploy AWS services using Terraform and maintaining multiple aws accounts using IAC.
- Setup CI/CD Pipelines for PHP Websites and Java Applications using Jenkins, UDeploy, Nexus and JFrog
- Run Java Applications in Elastic Kubernetes Service Environment and setup Deployments, Ingress and Services in EKS Cluster.

- Maintaining Apache, Nginx, and WordPress on Ubuntu and Amazon Linux ec2 instances.
- Used Amazon S3 to host static web content in AWS Cloud and exposed using cloudfront
- Managing Route53 and support disaster recovery
- Automate daily tasks using shell scripts and python
- Created Application Load Balancer to distribute incoming application traffic across Amazon EC2 instances.
- Create and manage IAM SSO, Roles, Policies to secure cloud environments
- Involved in Penetration Testing, Scanning and Patching of the Cloud Infrastructure
- Familiar with Virtual Private Cloud, Internet gateway, subnet and route tables using Amazon VPC.
- Setting alarms on metrics for EC2 instances using NewRelic

Technical Skills

DevOps Tools: MAVEN, GIT, Terraform, JENKINS, UDeploy, Nexus, NewRelic , Docker, Kuberenetes

Languages: Shell Scripting, YAML

Database: MYSQL, MariaDB, RDS, SQL Scripting

Networking/Protocols: DNS, TCP/IP, FTP, HTTPS, SSH, SFTP, SCP, SSL, VPN.

Operating Systems: Windows 7/8/10, Linux-Red Hat, UBUNTU.

AWS: EC2, IAM, ELB, CloudWatch, CodePipeline, RDS, S3, Route53, SES, VPC, EKS.

Web Application Servers: Apache, Nginx, Tomcat.

Academic Qualifications and Training

Bachelor of Technology in Computer Science and Engineering (3.4 GPA), May 2020 | JNTU, India
