svemuri1996@gmail.com

OBJECTIVE

A dedicated DevOps Engineer with **4+ years** of experience in managing and improving cloud environments and deployment processes. Skilled in ensuring system reliability, automating tasks, and supporting business needs with efficient solutions. Committed to delivering high-quality work and contributing to team success in a dynamic environment. Dedicated to driving operational excellence and delivering innovative cloud solutions aligned with business goals.

PROFESSIONAL OVERVIEW

- Results-driven IT Professional with 4+ years of expertise in **Cloud (Azure, AWS), DevOps, Infrastructure Automation**, and **CI/CD**, delivering scalable, fault-tolerant solutions.
- Architected and implemented **Azure services** (CDN, ExpressRoute, DNS, VNet, VPN Gateway, SQL, Web/Mobile Apps, PaaS) and **AWS solutions** (EC2, S3, EBS, EFS, Route 53, CloudFormation) for hybrid/private cloud configurations.
- Automated infrastructure using **Ansible Playbooks (Python), Chef, Terraform**, and **CI/CD pipelines** (Jenkins, Bamboo), including database deployments and container orchestration (**Docker, Kubernetes**).
- Secured environments with **Azure AD, B2C, Security Center** and monitored performance via **Application Insights, CloudTrail, Redis Cache, ElasticCache, SQS, SNS**.
- Designed scalable applications using **Azure Logic Apps, Stream Analytics, Functions** and managed storage solutions (**Azure Data Lake, Blob, Table, EBS, EFS**).
- Administered **Linux/Windows** systems, automated workflows with **Python/Shell**, and managed artifacts (**Nexus, Artifactory**) in **Agile/Scrum** environments using **JIRA**.
- Proficient in virtualization (**Hyper-V, VirtualBox**), source control (**GitHub, SVN, CVS**), and troubleshooting secure, high-performance infrastructure.

CERTIFICATIONS

- AWS Certified DevOps Engineer
- Microsoft Certified DevOps Engineer

PROFESSIONAL SKILLS

Cloud Platforms: AWS, Azure, GCP

CI/CD & Automation Tools : Jenkins, Octopus, Bamboo, GitHub Actions, Terraform, CloudFormation, Ansible, CI/CD Pipelines

Containerization & Orchestration: Docker, Kubernetes, Azure Kubernetes Service (AKS)

Scripting & Programming: Python, Java, Linux, PySpark, Bash, Shell scripting, PowerShell, SQL, C++

Version Control & Collaboration: Git, Bitbucket, GitHub Enterprise, JIRA, Confluence

Configuration Management: Chef, Puppet, Ansible Playbooks

Monitoring & Logging: Prometheus, Grafana, Datadog, New Relic, Azure Monitor, CloudWatch, Elastic Stack

Serverless & Microservices: AWS Lambda, Azure Functions, API Gateway, Swagger, Postman

Networking & Security: VPC, IAM, VPN Gateway, Azure AD B2C, Azure Security Center

Virtualization & Backup: VMware, Hyper-V, VirtualBox, Azure Site Recovery, AWS Backup

Cloud Cost Management: Azure Cost Management, GCP Billing, AWS Cost Explorer

WORK EXPERIENCE

Kohl's Corporation

Menomonee Falls, Wisconsin, USA

Role: DevOps Engineer

Jul 2024 – Present

Description: Kohl's Corporation, a leading omnichannel retailer, leveraged Azure DevOps to streamline CI/CD pipelines, automate deployments, and managed cloud-based microservices. As an DevOps Engineer at Kohl's, I am working with tools such as Azure Kubernetes Service (AKS), Terraform, and YAML pipelines to enhance system scalability and reliability.

Responsibilities:

- Led the design, planning, and implementation of migrating on-premises retail applications **to Azure Cloud** using **ARM templates**.
- Deployed **Azure IaaS Virtual Machines (VMs)** and **PaaS Cloud services** within secure **VNets** and **subnets**, ensuring scalability and security.

- Designed and implemented **Terraform templates** for provisioning resources like **Virtual Networks, Subnets, VM Scale Sets, Load Balancers**, and **NAT rules**.
- Used **Terraform Graph** to visualize execution plans and ensured smooth resource provisioning.
- Configured and deployed **Azure Automation scripts**, leveraging Azure services like **Compute, Web & Mobile, Azure Data Lake, Blobs**, and **HDInsight Clusters**.
- Wrote **PowerShell scripts** for automated reporting and environment management, improving operational efficiency.
- Developed and maintained **CI pipelines** using **Azure DevOps (VSTS)**, automating deployments to **Azure Kubernetes Services (AKS)**.
- Implemented **CI/CD pipelines** for zero-downtime deployments, ensuring high availability and customer satisfaction.
- Configured and deployed **AKS (Azure Kubernetes Services)** for container orchestration to enhance application scaling and performance.
- Deployed **microservices-based applications** on **AKS** with **Ingress API Gateway** and secured environments using **Nginx reverse proxy** with **SSL/TLS encryption**.
- Deployed and configured **Azure AD Connect, ADFS authentication flow**, and **ADFS installation** for integrating on-prem systems with **Azure**.
- Hardened **VMs** using disk encryption with **KEK keys** and ensured secure access to resources.
- Designed and implemented **Azure Disaster Recovery solutions**, including **Recovery Vault** and **Azure Backups**.
- Automated disaster recovery tasks using **PowerShell scripts**.
- Managed migration of retail data to **Azure** using tools like **Azure Data Factory (ADF)**, integrating **MySQL, SQL Databases**, and **Cosmos DB**.
- Ensured high availability and performance of retail applications by leveraging **Azure Kubernetes** for containerized deployments.
- Provided ongoing support for **Azure deployments**, ensuring proper configuration, performance, and security compliance.

Environment: Azure Cloud, Azure Stack, Azure Data Factory, Azure Data Lake, HDInsight Clusters, Azure Disaster Recovery, Azure Recovery Vault, Azure Backup, Terraform Templates, VM Scale Sets, Load Balancers, NAT Rules, PowerShell Scripts, CI/CD, Azure DevOps, VSTS, Azure IaaS, PaaS Services, VNETs, Subnets, Azure Kubernetes Service, SQL Databases, Cosmos DB, MySQL, VM Hardening, Nginx, SSL/TLS.

Epic Systems Corporation

Verona, Wisconsin, USA

Role: DevOps Engineer

Sep 2023 – Jun 2024

Description: Epic Systems Corporation is a leading healthcare software company specializing in electronic health records (EHR). As an DevOps Engineer, I worked with Amazon Web Services (AWS) to automate infrastructure, deploy scalable solutions, and manage CI/CD pipelines for continuous delivery. I leveraged expertise in AWS services, Terraform, and Kubernetes to support high-performance healthcare applications.

Responsibilities:

- Set up a Continuous Delivery pipeline using **Docker, GitHub**, and **AWS** for automated deployment and testing of healthcare applications.
- Configured instances behind **Elastic Load Balancer (ELB)** in **AWS** to ensure high availability and fault tolerance of applications.
- Managed **S3 Buckets** for storage and set up **RDS databases** with automated instance backups to **S3** for data security and recovery.
- Tuned **Redshift tables** for performance, performed **data validation**, and conducted quality checks using **Python**.
- Installed and configured **Ansible** on **AWS EC2 instances**, automating cloud deployment using **AWS CLI, Python**, and **CloudFormation templates**.
- Leveraged **AWS Lambda** to execute code in response to events such as changes to data in **Amazon S3 buckets**.
- Automated cost management by writing Ansible Playbooks for the auto-start/stop of AWS resources, triggered by **Jenkins**, and used **RHEL** with **Ansible modules**.
- Conducted data profiling, mapping, and integration from multiple sources into **AWS S3, RDS**, and **Redshift** for streamlined data management and analysis.
- Configured and optimized Linux-based environments for high-performance healthcare applications, ensuring secure and reliable operations across critical systems.
- Automated the creation of AWS environments using **CloudFormation, AWS CLI**, and **Shell/ Python scripts** for seamless infrastructure deployment.
- Worked with **Docker** to virtualize servers, build **Docker images**, and used version control to meet **Continuous Delivery** goals in a scalable environment.
- Utilized **AWS Server Migration Service (SMS)** for PostgreSQL “lift and shift” migrations, **AWS Database Migration Service (DMS)** for database migrations, and **AWS Snowball** for transferring large datasets.

Environment: Docker, GitHub, AWS, Elastic Load Balancer (ELB), S3 Buckets, RDS, Redshift, Python, Linux, Ansible, AWS EC2, AWS CLI, CloudFormation, AWS Lambda, Jenkins, RHEL, Chef, AWS Server Migration Service (SMS), AWS Database Migration Service (DMS), AWS Snowball, Shell.

Chewy
Mumbai, India

Role: DevOps Engineer

Nov 2021 – Dec 2022

Description: Chewy, an e-commerce leader in the pet supplies industry, utilized cloud infrastructure & CI/CD pipelines to deliver seamless online experiences. As a DevOps Engineer, I worked with Azure, Docker, & Kubernetes to automate deployments & enhance application scalability. I leveraged Terraform, Jenkins, and monitoring tools like Prometheus to optimize operations.

Responsibilities:

- Designed and implemented **Azure Data Factory**-based Ingestion Framework with **Azure SQL Database** and **Data Warehouse** for streamlined data processing/storage.
- Automated infrastructure using **Terraform** (resource versioning, Azure modules) and **Ansible** (manifests, roles) for Azure VM/server management, configuration automation, and system operations.
- Built **Jenkins CI/CD pipelines** (Python scripts, shell scripts) for package distribution and deployment to **Tomcat**, and managed **Docker** ecosystems (Slave Nodes, Swarm orchestration, Registry/Hub image management).
- Orchestrated containerized environments with **Kubernetes** (Helm charts, global deployment models), **OpenShift**, and **Cloud Foundry**, troubleshooting platform components for large-scale applications.
- Automated server builds, containerization (**Docker images/containers**), and deployments while developing **JIRA workflows** (project workflows, permission/notification schemes) to streamline development.

Environment: Azure Data Factory, Azure SQL Database, Azure Data Warehouse, Python, Jenkins, Tomcat, Ansible, Terraform, OpenShift, Kubernetes, Cloud Foundry, Docker, Helm, JIRA, Docker Swarm/Registry/Hub.

Goldman Sachs
Mumbai, India

Role: Cloud Engineer

June 2020 – Oct 2021

Description: Goldman Sachs, a leading global investment banking firm, utilizes cloud technologies to drive digital transformation. As a Cloud Engineer, I designed and managed scalable cloud infrastructures on AWS, using tools like Terraform, Kubernetes, and Ansible. Worked with databases such as Oracle, PostgreSQL, and Amazon RDS to ensure reliable and high-performance data management across cloud environments.

Responsibilities:

- Automated cloud infrastructure deployment via **AWS Code Pipeline**, **CloudFormation (JSON templates)**, and **Terraform (IAC)**, designing custom VPCs, subnets, NAT gateways, and databases for scalable web applications.
- Built CI/CD pipelines with **Jenkins**, triggering **AWS Lambda** actions to store build artifacts in **S3**, and deployed microservices to **Docker** registries using **Bitbucket** for source control and **Gradle** for automated builds/dependency management.
- Configured **AWS Route 53** for multi-region traffic routing and secured environments via **Security Groups**, **Network ACLs**, and **Linux server hardening** with **Prometheus/Grafana** for monitoring and log management.
- Orchestrated containers using **Kubernetes** (clusters, replicas) and **AWS ECS**, creating Docker images for middleware/configurations and virtualized test/dev environments.
- Managed **Kubernetes** clusters with **Prometheus** metrics visualization and ensured AWS root account security post-provisioning.

Environment: AWS Code Pipeline, CloudFormation, Terraform, Lambda, Jenkins, S3, Route 53, Linux, Security Groups, Network ACLs, Bitbucket, Gradle, Docker, Kubernetes, Prometheus, Grafana, AWS ECS.

EDUCATION

University of Wisconsin, Milwaukee, USA
Master's in information technology management
CGPA: 3.34
JAN 2023 – MAY 2024
