Data Analytics | Snowflake | dbt | SQL | Python | End-to-End Data Products | Stakeholder Translation

SUMMARY

Analytics Professional with 5+ years owning data products end-to-end — from ingestion and modeling to stakeholder-facing dashboards and governance. Deep SQL expertise across complex query design, performance tuning, and grain-level data modeling on Snowflake and cloud platforms. Experienced translating ambiguous business questions into working data models for non-technical stakeholders without jargon. Strong data quality instincts, always validates against source systems before shipping. Genuinely excited about AI and LLM-powered analytics — actively exploring Snowflake Cortex and conversational data experiences.

TECHNICAL SKILLS

Core Stack: Snowflake (incl. Cortex), dbt-style transformation frameworks, Apache Airflow, Git / GitHub

Languages: SQL (complex queries, performance tuning, grain modeling), Python (Pandas, NumPy, Scikit-Learn, pipeline scripting, workflow automation)

Data Modeling & Quality: End-to-end data product ownership, data validation, source-system reconciliation, data governance & access controls

Cloud Platforms: AWS (S3, EC2, RDS, Redshift), Snowflake, Databricks, Apache Spark, Hive

BI & Visualization: Tableau, Power BI, Looker, Streamlit (lightweight internal apps), Advanced Excel

AI & Emerging Tools: Snowflake Cortex, LLM-powered analytics, conversational data experiences — actively exploring

Collaboration & Delivery: Agile / SDLC, JIRA, cross-functional stakeholder management, technical documentation

EXPERIENCE

McKinsey & Company Inc. • USA

Dec 2025 – Present

Senior Analytics Consultant – SHaPE Tech

- Owned data products end-to-end for 5+ clients — from source ingestion and dbt-style SQL transformation workflows to stakeholder-facing dashboards — ensuring grain correctness, performance, and data quality at every layer.
- Wrote and optimized complex SQL queries on Snowflake and Databricks processing 100M+ records; carefully designed for query performance, grain alignment, and correctness before shipping to production — reduced data prep time by 40%.
- Translated ambiguous business questions from non-technical healthcare stakeholders into working data models and KPI definitions without jargon; validated all outputs against source systems prior to delivery, improving decision-making speed by 35%.
- Actively explored Snowflake Cortex and AI/LLM-powered analytics capabilities to prototype conversational data experiences for client reporting — contributed to a 20% improvement in proactive intervention rates.

Humana Inc. • USA

Jan 2023 – Nov 2025

Business Data Analyst – Data Products

- \$500K profit impact:** Owned end-to-end data product for claims coverage analytics — modeled source data in SQL, assisted in building ETL pipelines, implemented access controls for sensitive member data, and delivered stakeholder-facing reporting; increased claim approval rates by 25% and generated \$500K+ profit in 6 months.
- Designed and enforced data governance and access control frameworks for privileged healthcare data across enterprise Snowflake and Redshift environments; improved data accuracy by 30% through rigorous source-system validation.
- Translated business KPI requirements from non-technical operations and clinical stakeholders into working Tableau/Power BI data models; validated all metrics against upstream source systems before shipping — reduced reporting turnaround by 40%.
- Automated reporting workflows using dbt-style SQL transformations, eliminating manual data processing effort by 35% and improving pipeline reliability across 2M+ member records.

Accenture • Hyderabad, India

Jun 2019 – Dec 2021

Business Analyst – Product Analytics

- Analyzed operational and business performance data using SQL to identify process improvement opportunities, contributing to a 25% increase in team efficiency and enhancing reporting effectiveness by 35%.
- Developed Tableau dashboards and business reports to track key performance indicators, enabling stakeholders to monitor productivity, service levels, and operational trends more effectively.
- Collaborated with cross-functional teams and business stakeholders to gather requirements, validate data accuracy, and deliver actionable insights that supported informed decision-making and process optimization.
- Supported Agile project initiatives by maintaining documentation, tracking deliverables through JIRA, and coordinating with multiple teams, resulting in a 20% improvement in productivity and a 15% reduction in project delays.

EDUCATION

M.S. Business Analytics — Tennessee Wesleyan University, USA

2024

Coursework: Data Engineering, Statistical Modeling, Database Systems, Machine Learning

Bachelor's in business administration

2020

ICFAI Business School, Hyderabad, India
