

VAMSHI JULURI

Software Developer

Kansas, USA • 913-666-7886 • Vjuluri18@gmail.com

SUMMARY

Software Developer with over **3+** years of experience in building **scalable web applications** using **Java, JavaScript, TypeScript, Angular**. Proficient in developing and integrating **RESTful APIs** using **Java/Spring Boot** and **Node.js**, seamlessly connecting with **MongoDB** for data storage and retrieval. Experienced in **automating CI/CD pipelines** with **Jenkins** and **GitHub Actions**, significantly reducing deployment time and enabling weekly microservices releases. Skilled in optimizing **AWS cloud infrastructure**, including **EC2 and S3**, to efficiently manage concurrent requests with zero downtime. Additionally, accomplished at configuring **Apache HTTP Server** to process operational data, ensuring high availability and seamless performance for enterprise systems.

SKILLS

Programming Languages: Java, JavaScript, C, Python, SQL, TypeScript

Web/App Servers: Apache HTTP Server, NGINX

Tools & IDEs: Visual Studio, Eclipse, Spring MVC, JSF, Apache Struts

Databases and Tools: PostgreSQL, MongoDB, ServiceNow, GitLab, Bitbucket, Yarn, Gulp

Architectural Concepts: Microservices, RESTful APIs, SOAP, Apache Kafka, SOLID Principles

Frameworks & Libraries: Spring Boot, React, Node.js, Express.js, Django, Angular, Bootstrap, JUnit, Mockito

Cloud & DevOps: Kubernetes, Docker, Azure, Jenkins, CI/CD Pipelines, Apache Tomcat, Prometheus, Grafana

Additional Skills: Agile Methodologies, Debugging, System Design, Real-Time Data Processing, Unit/Integration Testing

PROFESSIONALEXPERIENCE

Uber

KS

Software Developer

Jul 2024 - Current

- **Migrated Legacy Systems & Optimized Performance** – Transitioned SOAP-based payment modules to cloud-native microservices (Spring Boot, REST, Docker, Kubernetes), reducing transaction failures and improving scalability. Refactored monolithic pricing and surge algorithms into modular microservices, cutting API response time by 30%.
- **Enhanced Data Processing & Caching** – Implemented Redis/Ehcache caching for ride-matching services, reducing database queries and improving throughput. Optimized MySQL query performance for fare calculations, reducing latency to 140ms through indexing and partitioning.
- **Developed Scalable APIs & Dashboards** – Designed GraphQL-based APIs to minimize data transfer overhead for 10M+ users. Built real-time analytics dashboards (Grafana, React, Material-UI) to monitor Kafka/Flink data pipelines and provide driver/rider insights.
- **Strengthened Security & Reliability** – Architected role-based access control (RBAC) for 50M+ users, ensuring GDPR/CCPA compliance. Enhanced fault tolerance with circuit breaker patterns (Resilience4j, Hystrix) to minimize downtime.
- **Led Agile Development & Feature Delivery** – Spearheaded sprint planning for a 6-member team, delivering 5+ features per quarter for Uber's driver incentive platform. Improved code integration with GitFlow and automated CI/CD, reducing merge conflicts.

Mckesson

KS

Java Developer

Jan 2024 - May 2024

- **Optimized React UI & State Management** – Developed and enhanced 6+ reusable React components using Hooks and Context API, reducing frontend development time by 30%. Implemented Redux for efficient global state management, improving performance for 500+ concurrent user sessions.
- **Integrated APIs & Improved Performance** – Integrated RESTful APIs with React and Axios, reducing response time by 40% and ensuring seamless data synchronization with backend microservices.
- **Built Scalable Java Microservices** – Designed and deployed Java-based microservices using Spring Boot and Docker, enabling independent scaling and handling 1,000+ concurrent requests with zero downtime. Established asynchronous communication via Kafka for real-time event-driven data flow.
- **Developed Interactive Dashboards** – Created 3+ real-time monitoring dashboards using React and Chart.js, facilitating the analysis of 5TB+ clinical data per month across multiple healthcare

departments.

Adani

India

Software Developer

Jan 2021 - Dec 2022

- **Developed Scalable Backend & API Solutions** – Engineered high-performance backend systems using Node.js, Express.js, and MongoDB, reducing probe execution time from 200ms to 120ms while handling 15,000+ daily requests. Optimized RESTful APIs with JWT authentication, improving session management and reducing backlog latency by 50ms across 8 client applications.
- **Optimized Databases & Data Pipelines** – Migrated 5TB of industrial sensor data to Amazon Redshift, cutting storage costs by \$15,000/month. Enhanced PostgreSQL clusters for logistics data, reducing query response times by 50%. Built ETL workflows using Apache Airflow, processing 2TB/day and improving data integrity by reducing errors from 500 to 50 occurrences.
- **Enhanced Frontend Performance & User Experience** – Designed and optimized Angular components, cutting page load time by 35% for enterprise dashboards. Implemented RxJS and NgRx for state management, ensuring real-time logistics monitoring and improving UI responsiveness.
- **Led CI/CD, Debugging & Documentation** – Automated CI/CD pipelines using Jenkins, reducing build times by 15 minutes per deployment. Resolved 30+ critical runtime issues monthly, cutting average resolution time from 2 hours to 45 minutes. Authored 12+ technical documentation packages, ensuring ISO 9001 compliance for multiple client deliverables.

EDUCATION

University of Central Missouri, Missouri, USA

Jan 2023 - May 2024

Master of Computer Science

TKR College of Engineering and Technology, India

Aug 2018 - Jun 2022

B. Tech in Computer Science and Engineering

PROJECT

File Segregator and Optimizer for Effective Storage

- Designed custom applications on the Salesforce platform to meet specific business needs, ensuring seamless integration with the existing Salesforce environment.
- Customized Visualforce pages to create tailored user interfaces, ensuring a user-friendly experience for business users. Visualforce was used to create custom pages, integrate with standard Salesforce components, and display content.
