EDUCATION

Master's Information Technology

Ira A. Fulton Schools of Engineering, Arizona State University

May 2024

4.0 GPA

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, Kotlin

Databases: Oracle SQL, Postgres, MongoDB

Tools: GitHub, Docker, Tableau, ELK Stack, Kubernetes, Excel, Linux, Snowflake

Frameworks: Spring Boot, Flask, Express.js, Next.js, React

WORK EXPERIENCE

Assembli.ai, Omaha, NE, USA: Full Stack Developer

November 2024 – Current

- Engineered an **AI-powered document processing** pipeline, integrating third-party tools to extract structured cost data from user-uploaded invoices.
- Built and maintained the web application, including frontend with **Next.js/React** and backend with **Flask**.
- Built triggers and functions to log **historical pricing updates**, enabling usage analysis, thereby facilitating optimization to the price search feature.
- Optimized application **infrastructure** using Google Cloud Run, Cloud Tasks, Cloud SQL, and Vertex AI, ensuring scalable and reliable deployment.
- Conducted **end-to-end application testing** to ensure performance, security, and functionality, leading to reduced bug reports and enhanced user experience.
- Collaborated via **GitHub** in Agile sprints, improving CI/CD workflows and deployment efficiency.

Tata Consultancy Services, India: Software Engineer

August 2020 – December 2022

- Designed and maintained **PL/SQL stored procedures, functions, and cron-scheduled jobs** in a legacy financial system, ensuring data pipelines executed reliably across chained processes.
- Performed debugging and root cause analysis of failing jobs by tracing dependent PL/SQL procedures/functions, resolving issues quickly and maintaining 100% SLA compliance.
- Created reusable custom PL/SQL procedures on request from departments to generate tailored reports outside the standard system, streamlining reporting workflows.
- Engineered REST APIs with **Spring Boot** for financial application, enabling streamlined tracking of accrual submissions, budget transfers, and cross charges submitted by Finance Analysts across departments.
- Implemented a high-performance **ETL pipeline** utilizing **Python, Pandas, and Oracle SQL** to automate the data-load process, reducing the processing time by 75%.
- Developed and executed complex SQL queries to validate data across ETL pipelines, ensuring accuracy and integrity of financial transactions.
- Facilitated daily stand-ups and sprint reviews in an Agile environment, which enhanced team communication and increased project transparency.
- Provided production support by proficiently utilizing SQL queries and debugging skills for **root cause analysis** of concerned issues and resolved client requests in a given time frame, maintaining a 100% resolution SLA.

Tata Consultancy Services, Hyderabad, India: Intern

January 2020 – March 2020

- Collaborated with cross-functional teams to integrate Logstash with the application server, guaranteeing seamless log collection and delivery to Elasticsearch for centralized storage, and created dashboards using Kibana for log analysis.

RELEVANT PROJECTS

Infrastructure Development with AWS CDK | CDK, EC2, DynamoDB, Lambda, S3, API Gateway

April 2024 – May 2024

- Leveraged **AWS CDK** to automate the provisioning and management of crucial AWS resources, including S3 buckets, DynamoDB tables, and API Gateway endpoints, underscoring proficiency in infrastructure automation.
- Followed AWS best practices to develop the architecture, ensuring scalability and reliability.

WeSplit | Express, Nodejs, Python, MongoDB, React, OAuth, Passportjs

January 2024 – April 2024

- Built an API using the **Express** framework to facilitate order claims in a group, integrating a **Python** script to extract order details from invoice PDF and store order details in **MongoDB**.
- Utilized middleware functions to handle authentication and real-time data validation, assuring secure access and accurate processing of claimed amounts against pending amounts within the group.

Secure File Sync using Google Drive API | Python, Google Drive API, OAuth

October 2022 – December 2022

- Created a secure file synchronization solution utilizing the **Google Drive API** to zip, upload, download, and unzip files/folders across systems.
