

Professional Summary:

- Experienced Java Full-Stack Engineer with around **10** years of dedicated expertise in designing, developing, and delivering high-quality software solutions. Proven track record of successfully translating complex business requirements into innovative technical solutions that drive efficiency and enhance user experiences.
- Experience working in environments that employ **Agile** (SCRUM) and **Test-Driven Development (TDD)** methodologies.
- Developed robust and efficient applications using **Java 8's** features to enhance code readability and maintainability.
- Implemented multithreading and concurrency solutions using Java 8's **Completable Future** and **parallel stream** features to enhance application responsiveness.
- Proficient in using **Java 8's Date and Time API** to handle date-related operations efficiently and avoid common pitfalls associated with older date libraries.
- Expert in UI design and Frontend development using **HTML4/5, CSS2/3, Typescript, JavaScript (ES5/6/7/8), Ajax, jQuery, JSP, Angular2/4, NodeJS, ReactJS** and **BackboneJS, Express JS**.
- Extensive knowledge of **React JS** for creating interactive UI using one-way data flow, virtual DOM, JSX, ReactJS components, Forms, Events, Keys, Routers, and Animation.
- Experience with **Angular** tools like Angular CLI, AngularFire, and ng2-bootstrap.
- Experience with **Angular 8,9,10** components, dependency injection, services, routing, pipes, animations, forms, AOT, and Lazy loading.
- Hands-on experience in **Core Java** with Garbage Collection, Multithreading, File Handling, Concurrency, Data Structures, and Generics.
- Knowledge of Java8 features like **filters, functional interfaces, parallel streams, and lambdas**.
- Experience in **Spring** framework (**JDBC/AOP/BATCH/MVC/IOC/WEBFLOW/ ORM/Context**) and **Struts (MVC, architecture, interceptors, action mappings, and resource bundles)**.
- Having experience in developing Microservices using **Spring Boot**, and building API which is used in developing **Restful** Web services.
- Working knowledge in developing, deploying, and managing server-centric **J2EE** enterprise class projects using **MyEclipse, Eclipse IDE, J2SE, Applets, Java, JDBC, Swing, and RMI**.
- Experience in Design patterns like **Factory, DAO, Singleton, Session Façade, Delegate pattern, and Front Controller**.
- Knowledge of developing messaging modules using **Spring JMS, Apache Camel, and Rabbit MQ**.
- Good Experience in developing and deploying applications using **JBoss, IBM WebSphere Application, Apache Tomcat, and Web Logic Application Server**.
- Knowledge in database modeling and development using **No SQL** database like **Cassandra** and **MongoDB** and **RDBMS** implementation and development using **My SQL, DB2, and Oracle**.
- Good experience in developing model components using **ORM** technologies such as **Hibernate**, and **My Batis** to write and maintain portable relationships between the databases.
- Expertise in developing microservices frameworks with guidelines. Followed **skeleton model** and developed interfaces on top of the baseline prototype.
- Having complete knowledge in the development of **SOAP**-based web services (using **Apache CXF** and **JAX-WS**) and **Restful** services (using **JAX-RS** specifications like **Jersey** and **Rest Easy**), **IAX-WS**, and **IAXB**.
- Working knowledge in implementing Service Oriented Architecture (**SOA**) using **XML**-based web services such as **SOAP, UDDI, and WSDL**.
- Integrated **Kafka, MQ, or PubSub** messaging systems into Java-based applications to establish robust data communication channels and event-driven architectures.

- Implemented real-time data streaming and event processing by leveraging **middleware** solutions, ensuring low-latency and high-throughput data transfer
- Experience with Cloud Computing Service environments like Amazon Web Service (**AWS**) and its features including **IAM, EC2, EBS, S3, VPC, RDS, Cloud Watch, SQS, SNS, Lambda, Route53**, and **ELASTIC SEARCH**).
- Working experience in designing a distributed system using **Restful API** and **microservices**.
- Knowledge of DevOps processes like Continuous integration using **Jenkins, JIRA, GIT**, and **CHEF**.
- Experience in using configuration management and version control tools like **GIT, SVN**, and **CVS**.
- Expertise in using Build Automation tools like **Ant** and **Maven**.
- Good experience in developing test cases for unit testing using **Junit, Mockito**
- Expertise in logging using **Log4j** and **Mock Testing**.
- Working knowledge of testing on multiple operating systems including **Unix, Linux, Windows**, and **Sun Solaris**.

Technical Skills:

Programming Languages	Java, C, and Python
J2SE technologies	Core Java, Microservices, Swing, Threads, JDBC, Servlets, JSP, Hibernate, Java Beans
Web technologies	HTML, CSS, JavaScript, Web Services, AJAX, jQuery, ReactJS, Angular, and NodeJS
Web Servers	Apache Tomcat, WebLogic, IBM WebSphere
XML technologies	XML, XSL, XSLT, DOM, and JAXB
Database	Oracle, My SQL, MS-SQL server, MongoDB, PL/SQL and Cassandra
Cloud Technologies	AWS, Google Cloud Platform, AZURE
Development Tools	Eclipse, Net Beans, JBuilder, Sublime Text, Visual Studio
Build Tools	Ant, Maven, and Jenkins
Testing Tools	Jasmine, Karma, Junit, JMeter
Version Control System	GIT, SVN, CVS
Tools	SQL Developer, DB Visualizer, Visio
Operating System	Windows, LINUX, UNIX, and Sun Solaris

Professional Experience:

Client: T-Mobile

May 2023 - Present

Location: Bellevue, WA

Role: Java Full Stack Developer

Responsibilities:

- Collaborated with business stakeholders to understand requirements, analyze, design, and develop application architecture by following **Agile** methodology and **Scrum**.
- Used Node.js for server-side web applications for JavaScript codes to build web APIs and customized the **Node.JS** server to pick the local storage **JSON** and run the applications without changing the local paths and variables.
- Designed and implemented publish-subscribe patterns using **PubSub** systems to enable efficient broadcasting of data to multiple subscribers
- Collaborated on building event-driven microservices using **PubSub**, promoting modular and scalable application design
- Created a responsive and user-friendly frontend using **HTML5, CSS3, JavaScript, Bootstrap, JSON, and React JS**, enabling seamless audio streaming and content navigation.
- Implemented dynamic UI components to provide an engaging user experience.
- Integrated **middleware** solutions with Google Cloud services such as Google Cloud **PubSub**, Cloud Storage, BigQuery, or Dataflow, enhancing the capabilities of the application
- Ensured that **middleware** components can scale horizontally and that load balancing is configured to handle increased traffic and workload
- Optimized database queries and resource utilization to ensure efficient data retrieval and processing.
- Utilized concurrency mechanisms to handle concurrent user requests and ensure smooth audio streaming.
- Utilized **Google Cloud** Functions or Cloud Run to build serverless backend components, reducing operational overhead and improving cost efficiency
- Integrated various **Google Cloud APIs**, such as Cloud PubSub, Cloud Vision, or Cloud Natural Language, to enhance application functionality.
- Implemented continuous integration and continuous deployment (CI/CD) pipelines using **Google Cloud** Build or other CI/CD tools to automate the build, test, and deployment processes
- Designed the user interface of this single-page application (**SPA**) by coding in **HTML, CSS, REACT.JS, and Bootstrap**.
- Developed server-side APIs under **NodeJS** runtime environment with **Express.JS** framework as a back-end server and used Node.JS to implement microservice.
- Developed **Restful** web services using **CXF** as wrappers to access existing business services by mobile channel.
- Created the Node.JS Express Server combined with Socket.io to build **MVC** framework from front-end React to back-end **MongoDB** to provide broadcast service as well as chatting service.
- Consumed **Restful** web services using **Apache HTTP** client for the data coming from external systems.
- Built **Maven** scripts for automated deployment and the build operation of the entire app.
- Used **Celery** as task queue and **RabbitMQ, Kafka** as messaging broker to execute asynchronous tasks.
- The application is developed entirely on the **MERN** stack with deployment on **Node.JS, MongoDB, Express, and React.JS** following the **MWM** design pattern.
- Integrated **Mockito** framework to mock the **POST** and **GET** services between the applications and also for existing hosted applications for clients.
- Configured **CI/CD** pipeline for the automatic deployment of applications using **Jenkins CI** and cleaned for the new build process whenever code commits are done to **Git**.
- Managed **JIRA** templates, workflows, and other functionality evaluation also managed confluence add-ons and macros.
- Utilized **Docker** and **Kubernetes** for containerization and orchestration of application components.
- Worked with business stakeholders to create reports using a **Tableau** desktop for conveying.
- Involved in Test Driven Development by using the **JUnit** framework for writing automated unit testing.
- Set up monitoring and logging using **Google Cloud** Monitoring and Google Cloud Logging, providing real-time insights into application performance and diagnosing issues
- **Log4j** to capture the log which includes runtime exceptions.
- Provided ongoing support, bug fixes, and enhancements post-deployment to ensure a smooth user experience.
- Addressed user-reported issues promptly to maintain high customer satisfaction.

Environment: Agile, Scrum, Core Java, React JS, NodeJS, JSON, AMI, Google cloud platform, S3, RDS, MongoDB, Route53, HTML5, CSS3, JavaScript, Bootstrap, jQuery, Hibernate, Cloud Formation, Log4j, Mockito, PubSub, Kafka, Jenkins, GIT, JIRA.

Client: Capital Group

Jan 2021 – Apr 2023

Location: Irvine CA

Role: Java Full Stack Developer

Responsibilities:

- Worked in a dynamic **Agile** environment, and participated in **Scrum** and **Sprint** meetings.
- Developed front end using **HTML5, CSS3, JavaScript, JSON, jQuery, Bootstrap** and **Angular 4/6**.
- Configured and ran Spring tasks and handled **injection, CSS pre-processing, minifying, test-running, and building-sync**.
- Developed **custom directives, Factories, and services** in **Angular** and implemented code as per coding standards and created an Angular controller to isolate the scopes to perform operations and extensively used **Core Java like Exceptions and Collections**.
- Worked with the **Spring Framework hibernate** integration to maximize the Classical model view controller layer (**MVC**) Architecture.
- Created and configured **Java Beans** using **Spring IOC** and **Spring Hibernate** support.
- Made use of **Java8** features such as **lambda expressions** to store and process the data, parallel operations on collections, and multithreading for effective sorting mechanisms.
- Worked with **AWS** cloud service in creating **EC2** instances and providing them roles and sometimes participated in writing custom policies and deployed applications on **Elastic Bean Stalk** and **EC2**.
- Experienced in working with event-driven and scheduled **AWS Lambda** functions to trigger various AWS services.
- Used **AWS SDK** for connection to Amazon **S3** buckets as it is used as an Object storage service to store and retrieve media files related to the application and **Amazon Cloud Watch** is used to monitor and store the logging information.
- For the database **PL/MySQL** and **MongoDB** were used and hosted in the cloud using Amazon **RDS** service.
- To move old data to archives we configured and managed **AWS Glacier** based on the retention policy of databases/applications.
- Involved in **AWS SQS** to interact with queue and give roles to it and involved in writing Custom policies.
- **Jenkins** is used as the integration tool and improves the scalability of the app on cross-platforms.
- Deployed the application **EAR** and **RESTful** services on the **JBoss** application server.
- Experienced in implementing microservices, and service-oriented architecture (**SOA**) with **XML**-based web services (**SOAP/UDDI/WSDL**) using both top-down and bottom-up approaches.
- Developed a suite of microservices responsible for different aspects including account management, transaction processing, and reporting.
- Designed **RESTful APIs** to facilitate communication between front-end and back-end services, ensuring seamless data flow.
- RESTful web services were implemented to get data from the client side and constructed using **Jersey, Spring, and JAX-RS**.
- **Angular** connections to the **REST API** were made and data was parsed before projecting to the client. To handle security and authorization **Spring Security** and **OAuth** were used.
- Developed **CI/CD** pipeline using **Jenkins** in Google's **Kubernetes** container environment, using **Kubernetes** and **Docker** as the runtime environment for building, testing, and deploying the CI/CD system.
- Involved in developing **APIs** and **Rest API proxy** using **APIGEE** edge and for sending mobile notifications.
- Developed web services client using **REST, and RSDL** for verifying the new customer history to a connection and managed code versioning with **GitHub** and deployment to staging and production servers.
- Developed **DAOs** using **Hibernate** as **ORM** to interact with **DBMS-MySQL** and **MongoDB**.
- Full-text search function was optimized by connecting to **MongoDB**.
- To increase isolation worked with **docker** to deploy **microservices** in modern containers.
- Worked on **Thread handling** to maintain continuity of execution and extensively implemented multithreading concept to handle transaction management with isolation and propagation levels.
- Used **Maven** as a build process to generate documentation, report, and add dependencies.

- Implemented unit, integration, and end-to-end testing using frameworks like **JUnit** and **Jasmine**, ensuring the application's reliability and stability.
- Used **JUnit** test in Eclipse to develop unit test cases and test suite, **Curl** was also implemented to test.

Environment: Java, J2SE/J2EE, HTML5, CSS3, JavaScript, jQuery, Spring, Spring Boot, Spring Batch, Spring MVC, Angular, PL/MySQL, JDBC AWS, Hibernate, REST, JSON, RESTful, Eclipse, Maven, JUnit, Jenkins, JBoss, Linux OS, MongoDB, GIT, DOCKER, ANT, JIRA, and KAFKA.

Client: Blue Cross Blue Shield

Feb 2019 – Dec 2020

Location: Chicago IL

Role: Java / UI Developer

Responsibilities:

- Involved in Design, Development, and support phases of Software development life cycle (SDLC) using **Agile** methodology also participated in **Scrum** and **Sprint** meetings.
- Extensive experience in building dynamic user interfaces using **HTML5, CSS3, JavaScript, and ReactJS**.
- Utilized **Redux** for state management, ensuring efficient data flow and maintainable application states.
- Created reusable React components, enhancing codebase modularity and development speed.
- Used Cloud-native SaaS or PaaS leveraging APIs, web services, or microservices for the web development features.
- Implemented **RESTful** APIs and integrated them into web applications, ensuring smooth data exchange between the frontend and backend using JavaScript's **Fetch API** or **Axios**.
- Designed and optimized database schemas using **PL/MySQL**, improving data retrieval speed by 30% and enabling efficient data manipulation for reporting and analytics.
- Integrated third-party libraries and services, such as **OAuth2** authentication and data visualization tools, enhancing application functionality and providing a richer user experience.
- Implemented automated testing using **JUnit** and **Jest**, reducing the number of post-release defects by 25% and contributing to a more stable and reliable application.
- Improved application security by implementing input validation, encryption, and secure authentication mechanisms, ensuring compliance with industry best practices and data protection regulations.
- Developed **Hibernate** mapping files using different mapping strategies such as table per class hierarchy and used Hibernate persistence strategy to interact with a database.
- Enhanced user experience by designing new web features using an **MVC** framework like **Spring**.
- Used **AJAX** and **JSON** to make asynchronous calls to the project server to fetch data on the fly.
- Designed and developed a tool to send and retrieve data to third-party service providers using **REST** also used **RESTful** client to interact with the services by providing Restful URL mapping.
- Worked with Continuous integration and automation using **Git, SVN, Jenkins, Apache**, and **Tomcat**.
- Created buckets in **AWS** and stored files by enabling versioning and security.
- Deployed the application in the WebSphere Application server and configured **Kafka** in the WebSphere application server to send pages in the queue.
- Worked on the **celery** task queue and service broker utilizing **RabbitMQ**, as well as for load testing, unit testing, and Test-driven development.
- **Spring controllers** were used with Angular to route the control to desired Java services and implemented scripting with **Ajax** and **XML** to dynamically refresh the page contents.
- Developed controller for request-response paradigm by Spring Controllers using Spring MVC. Used JSON as response type in REST services.
- Designed and developed a **Restful** service interface using Spring MVC to the underlying customer event API and was involved in building Restful web services using **JAX-RS API**.
- Involved with bug fixing on functionality, performance, and designing issues with **JavaScript, jQuery, HTML5, CSS3, and REACTJS**.
- Worked on cloud implementation by installing, building, and deploying applications using Cloud Foundry and using **AWS**.
- Used **Maven** as the build tool and **Tortoise SVN** as the source version controller and used **SVN** as the configuration management tool to manage the code repository.
- Performed unit testing using **JUnit** also involved in developing stored procedures and triggers on **Oracle**.

- Contributed to Agile development methodologies, participating in sprint planning, daily stand-ups, and retrospectives, ensuring timely and efficient project deliveries.

Environment: Java, J2EE, Spring Framework, Hibernate, AJAX, Oracle, Web services, Aws, Agile, REST, XML, WebSphere, JavaScript, Angular, jQuery, JBoss, Junit, GitHub, JSP, CVS, MVC, Maven, and SVN.

Client: Coinbase

Nov 2016 – May 2018

Location: India

Role: Java Developer

Responsibilities:

- Followed **Agile Scrum** methodology and used Test Driven Development (**TDD**) for writing test cases.
- Participated in discussions with the business experts to understand the business requirements and translate them into technical requirements for development.
- For designing webpages **HTML, CSS, JavaScript, JSON, JSF, ReactJS, and Bootstrap** were used.
- **AJAX** was used for the dynamic search capability and created usability prototypes using **React JS**.
- Developed Customized **Spring** Multi Action controllers for handling similar operations and configured spring and **Spring JDBC** frameworks to develop full-fledged MVC and DB interaction applications.
- Designed and documented **REST/HTTP APIs**, including **JSON** data formats.
- Implemented microservices architecture using **Spring Cloud**, breaking down monolithic applications into modular components, leading to easier maintenance and scalability.
- Integrated **spring** with **Hibernate** and used **spring IOC** concept, used Spring Framework **AOP** Module to implement logging in the application to know the application status.
- Developed a fully automated continuous integration system using **Git, Jenkins**, and **PL/MySQL**, also custom tools were developed. Automated deployments and continuous integration utilizing **AWS Cloud Templates, Docker**.
- Used **Spring DAO** Module to deal with the Database and designed configuration **XML** Schema for the application.
- Worked on enterprise service bus using **Hibernate**, and **Spring** to tie back-end Business logic/systems with web properties via **Restful API** and Developed the middle tier using Java Servlets.
- Resolved critical production issues by performing in-depth root cause analysis and implementing strategic solutions, leading to a 50% reduction in system downtime and improved client satisfaction.
- Implemented continuous integration and continuous deployment (CI/CD) pipelines using **Jenkins and Docker**, automating the build, testing, and deployment processes, resulting in quicker and more reliable releases.
- Designed and optimized database schema, improving query performance by 40% and enhancing overall system responsiveness for end-users.
- Used the **Maven** project structure and added dependencies, and plugins to pom.xml.
- Developed a stored procedure for achieving data validation and configuration files corresponding to beans mapped and backend database tables.
- Implemented **Traveling Salesman Problem (TSP)** using a **custom algorithm** and deployed the application on **BEA WebLogic Server**.
- Used **SQL Server** as a database for creating stored procedures.
- Implementing analytical engines that pull data from API data sources and then present data back as either an API or persist it back into a **NoSQL (MongoDB)** platform.
- Developed coding, maintaining, and administering **Servlets**, and **JSP** components to be deployed on a **WebLogic Application server** and **Apache Tomcat** application servers.
- Developed, and debugged the **servlets** with the Web Sphere Application server.
- Used **Mockito** for Unit testing.
- Designed and prepared a Unit test case using **JUnit** and **Log4j** and removed the maximum Bugs before passing on the application.

Environment: Java, J2EE, CSS, HTML, JavaScript, JSON, JSF, REACTJS, Bootstrap, XML, WSDL, SOAP, JMS, Spring MVC, Spring DAO, Struts, Hibernate, REST and SOAP APIs, SQL, PUSQL, Junit, Log4j, WebSphere, Apache Tomcat, WebLogic Application server, Maven.

Client: BMC Software

Jun 2015 – Oct 2016

Location: India

Role: Java Developer

Responsibilities:

- Developed dynamic web pages using **HTML, CSS, jQuery, Bootstrap, and AJAX**.
- Worked with **Angular JS Controllers, Directives, Services, and filters** for application functionality.
- Used many Angular JS directives which allow the development of many custom and reusable HTML web pages for data binding and behavior of components.
- Used Angular JS to create views to hook up models to the **DOM** and synchronize data with the server as a Single Page Application.
- Used **Backbone JS** to utilize its rendering functions and create controllers to handle events triggered by clients and send requests to the server.
- Implemented and optimized **multi-threading** techniques to improve application performance, resulting in a reduction of processing time for critical tasks.
- Designed and developed **multi-threaded** modules for a high-throughput data processing system, increasing overall system efficiency.
- Demonstrated expertise in utilizing **thread pools** and **parallel processing libraries** to effectively manage and distribute computing resources, leading to enhanced system responsiveness.
- Successfully identified and resolved **thread synchronization** issues, ensuring seamless coordination among threads, and preventing race conditions.
- Utilized **Core Java** concepts like **Collections, Multithreading, and Exception handling** to develop business components.
- Used Multithreading in programming to improve overall performance using the Singleton design pattern in **Hibernate** Utility class.
- Developed application on **Spring** framework by utilizing its features like **Spring Boot, Spring Dependency injection, Spring Beans, Spring Security, Spring JPA, and Spring Web flow** using MVC.
- Used **Spring Core** for configuring and using the **spring beans** in the application.
- Developed **RESTful** services based on **Spring REST** using the **Jersey** framework.
- Developed several **RESTful API** web services which produce both **XML** and **JSON** to perform tasks, leveraged by both web and mobile applications.
- Documented the **REST APIs** using **Swagger API** for briefing the services involved in the application.
- Implemented Cross-cutting concerns like logging and declarative transaction management using **Spring AOP**.
- Used spring batch framework to create custom readers and writers to work with the application.
- Used **Hibernate** in the data access layer to access and update information in the database and used **HQL** to query the database for complex data.
- Implemented **ODBC** which is used for connecting to the database **Oracle**.
- Provided support for all core web services technologies including Web Service Description Language (**WSDL**).
- Integrated testing methods implemented by using **Karma** and **Jasmine**.
- Experienced with Continuous Integration and Continuous Delivery by using tools like **Jenkins**.
- Have worked on **AWS** to integrate the server-side and client-side code.
- Used AWS deployment services to quickly set up a dynamic website and configured virtual servers.

Environment: SOA, HTML, CSS-SaaS, AJAX, Angular JS, SOAPJAX-RS, jersey, Swagger, Hibernate, Spring, Spring Batch, WSDL, Spring AOP, Oracle DB, Karma, Jasmine, Jenkins, AWS, JWT
