Professional Summary

Lead Software engineer with over 12 years of extensive experience in Python development, Backend engineering, and Cloud automation

Work Experience

NetApp, Remote (Chicago, IL)

Feb 2022 to Present

Lead Software Engineer, Spot Connect SaaS platform

Spot Connect is a cloud automation platform used by DevOps and SREs to create low-code automation and incident remediation workflows. My role is to design and develop the backend services, manage the AWS cloud infrastructure and third-party integrations for the SaaS platform.

Responsibilities:

- Designed and developed REST APIs for Spot Connect backend web services and third-party API integrations using Python and Flask framework
- Involved in the design and development of Serverless applications on AWS using API Gateway, Lambda, Step Functions and MongoDB
- Designed and developed AWS integration for Spot Connect platform to onboard customers AWS accounts
- Developed OAuth 2 based authentication and JWT token management for API security
- Migrated secrets from AWS Secrets Manager to MongoDB for the multi-tenant SaaS application
- Implemented unit tests for backend services and mocked AWS resources using Pytest
- Designed CI/CD pipeline with Infrastructure as Code using AWS Boto3 SDK and Terraform for deployment of product on AWS infrastructure
- Developed Cloud automation and incident remediation use cases for customer's DevOps and SRE teams

Fylamynt (Acquired by NetApp), Mountain View, California

Jul 2019 to Feb 2022

Lead Software Engineer

Fylamynt is a SaaS startup which provides a low-code cloud automation platform to manage public cloud infrastructure. My role is to build the workflow execution platform and integrations to onboard cloud accounts.

Responsibilities:

- Designed and implemented workflow execution platform which is a key backend system for Fylamynt using Python and Flask
- Worked closely with product managers to prioritize, design, and implement backend APIs for the third-party SaaS integrations
- Implemented OAuth 2 authorization flows for third-party API integrations
- Developed an integrations platform that enabled access to third-party enterprise systems like Datadog, PagerDuty, Terraform, Jira, GitHub, Slack, etc.

- Implemented webhooks to trigger Spot Connect workflows based on the events from third-party enterprise systems
- Implemented unit tests, integration tests, and API tests for backend services
- Developed Kubernetes integration to remediate issues in AWS EKS cluster

Cisco Systems, Bangalore, India
Senior Software Engineer, Cisco IoT

Jan 2017 to Jul 2019

Cisco IoT Control Center is a cloud-based SaaS platform that manages connectivity, billing of 150 million IoT devices. My role is to develop automation tools using Python for cloud infrastructure automation and software deployments.

Responsibilities:

- Created self-service developer tools for the deployment of backend services
- Redesigned and implemented the deployment automation of the Cisco IoT platform to containers running on AWS
- Designed CI/CD pipeline with Infrastructure as Code using Python, AWS Boto3 SDK and Terraform for deployment of IoT backend services on AWS infrastructure
- Developed monitoring tools to check the status of services and collect metrics from Linux systems across Cisco data centers globally

Hewlett Packard Enterprise R&D, Bangalore, India
Software Engineer, HPE OpenCall

May 2015 to Jan 2017

HPE OpenCall is a telecommunications platform. My role is to develop automation for the build systems.

Responsibilities:

- Developed automation scripts to manage source control repositories, remote repositories, build systems, and web servers
- Worked with engineering teams and ensured that the right deployment strategies were aligned with the products
- Developed automation to package and deploy artifacts on different Linux-based systems
- Implemented Infrastructure as Code to launch instances and setup environment on HP Helion OpenStack Cloud

Tata Consultancy Services, Bangalore, India
Software Engineer, Performance Service Plan (PSP) Application for Best Buy

July 2012 to Apr 2015

My role is to develop, build automation and deployment tools, and manage the deployment environments.

Responsibilities:

- Developed build and deployment automation scripts which has improved developer productivity and faster release process
- Managed source control repositories and implemented branching, merging, and tagging
- Created bootstrap scripts to setup deployment environments on QA, Staging, and Production
- Managed CI/CD pipelines on a Jenkins cluster running 150+ nodes

Education

Bachelor of Technology with Information Technology, Jawaharlal Nehru Technological University, Kakinada, India 2012

Skills

Programming & Frameworks: Python, Flask, Perl, Shell

Version Control: Git, Perforce, Subversion

Databases: MySQL, PostgreSQL, Oracle, MongoDB, AWS RDS, AWS DynamoDB

Continuous Integration: Jenkins, CircleCI, Buildbot

Cloud: AWS, GCP, OpenStack (HPE Helion)

Container Platforms: Docker, Kubernetes, AWS ECS, AWS EKS, Rancher

Messaging Queues: Apache Kafka, AWS SQS

Infrastructure Automation: Terraform, Ansible, AWS CloudFormation

Logging & Monitoring Platforms: Datadog, Splunk, Elasticsearch, Kibana, Grafana, Prometheus

Linux Distributions: RHEL, CentOS, Ubuntu, Amazon Linux
