

Venkata Khande
+1(609)721-2009 | kvuc2021@gmail.com | [LinkedIn](#)

Around 6+ years of professional experience in designing and developing object-oriented and web-based enterprise applications using Java/J2EE technologies, with expertise in full SDLC implementation.

- Proficient in AWS services, including EC2, S3, DynamoDB, Lambda, API Gateway, CloudWatch, SQS, SNS, and EKS, with hands-on experience in implementing scalable and secure cloud-based solutions.
- Strong expertise in Java, Spring Boot, and Microservices architecture, leveraging RESTful and GraphQL APIs for seamless backend integration.
- Skilled in front-end technologies such as Angular, JavaScript, HTML, and CSS3 for building responsive and user-friendly web interfaces.
- Hands-on experience in data engineering with tools like Apache Spark and integration with AWS storage and compute services.
- Hands-on experience in publisher and subscriber model with queues (JMS with active MQS, IBMQ). Implemented a metrics collection mechanism for the server by utilizing Apache Kafka to stream server-side events.
- Designed and implemented GRC modules for risk assessment, compliance tracking, and audit management using Java-based frameworks such as Spring Boot and Hibernate.
- Familiarity with CI/CD pipelines using Jenkins and Bitbucket, ensuring automated builds, testing, and deployments for continuous delivery.
- Adept at version control with Git and artifact management with Nexus, streamlining development workflows and ensuring code quality.
- Extensive experience in using Hibernate ORM for data persistence and implementing design patterns such as DAO, DTO, and MVC for robust application architectures.
- Expertise in performance tuning, defect fixing, and using Spring Boot Actuator for production environment monitoring and management.
- Comprehensive knowledge of API technologies, including OAuth for secure communication and integration.
- Demonstrated strong skills in agile (SCRUM) methodologies, collaborating across teams for end-to-end application development and rollout.
- Excellent communication and presentation skills, including conducting functional and technical training sessions and collaborating effectively with cross-functional teams.

TECHNICAL SKILLS

- Programming Languages: Core Java, J2EE, TypeScript, HTML5, CSS3, JavaScript, Angular, SQL, DynamoDB.
- Cloud Services/Databases: AWS Services (EC2, S3, IAM, CloudWatch, DynamoDB, SNS, SQS, Lambda, API Gateway), Oracle, MS SQL Server, MySQL, Kafka.
- Frameworks/Tools: Spring (Core, MVC, Boot, Data JPA, Redis Cache), Angular, Jenkins, Docker, Kubernetes, Postman, Visual Studio Code, Eclipse, Git, Jira, Bitbucket.
- Concepts: Microservices Architecture, RESTful APIs, JSON, Swagger, JUnit, Mockito, Apache Tomcat.
- Methodologies: Agile (Scrum).
- Version Control: Git, Bitbucket, SVN.
- Testing Tools: JUnit, Mockito, Karma.
- Reporting Tools: MS Excel, MS PowerPoint.
- Servers: Apache Tomcat.

PROFESSIONAL EXPERIENCE

Full Stack Developer at Discover Financial Services

Feb 2025 – Current

- Developed and maintained scalable microservices-based applications using Spring Boot, Java, and JPA, improving modularity and deployment cycles.
- Designed and consumed secure RESTful APIs integrated with JWT-based authentication, enhancing application security and user access control.
- Utilized Kafka for asynchronous data streaming between distributed services, reducing latency and improving system resilience.
- Integrated Swagger documentation into all APIs, streamlining backend-to-frontend communication and easing developer onboarding.
- Analyzed and monitored application health and performance using Datadog, proactively identifying issues and optimizing system uptime.

- Built SQL queries and managed schemas in MySQL and PostgreSQL, supporting critical business transactions and reports.
- Collaborated with cross-functional teams to troubleshoot and debug issues, utilizing tools like jQuery for front-end behaviour and Postman for API validation.
- Developed and enhanced microservices managing customer profiles, cards, and permission controls, ensuring secure and consistent customer data across systems.
- Created new REST APIs and enhanced existing ones to support evolving business requirements; addressed dependency upgrades, security vulnerabilities, and deprecated libraries for long-term maintainability.
- Integrated JWT-based authentication into service endpoints to enforce secure and stateless access control for internal and external consumers.
- Refactored unit and integration tests to align with upgraded libraries and business logic, improving test coverage and reducing regression bugs.
- Contributed to the postPromotionExecution process by updating Jenkins pipeline configurations to align with new deployment standards.
- Developed JPA-based queries for efficient retrieval from the Outbox pattern table, supporting eventual consistency in microservices architecture.
- Configured and maintained Datadog monitors for real-time alerting and performance tracking of critical APIs and background jobs.
- Adjusted Spring Security configurations to support evolving access models and internal compliance policies.
- Leveraged Apache Kafka for event-driven communication between services, enhancing decoupling and scalability in distributed systems.

Environment: Java, Spring Boot, MySQL, PostgreSQL, REST API, Microservices, Kafka, Jenkins, Swagger, JWT, JPA, Datadog, jQuery.

Full Stack Developer at Freddie Mac

Apr 2024 – Feb 2025

- Designed and developed Restful and GraphQL for different modules in the project as per the requirement by attending grooming sessions with the business analysts.
- Customized GraphQL queries to accept limit and sort parameters and implemented error handling and caching in GraphQL.
- All the functionality is implemented using Spring Boot and MongoDB.
- Loading data from MongoDB using spark and uploading it to AWS S3 buckets in parquet format.
- Implemented the application using Spring Boot Framework and handled the security using Spring Security and OAuth.
- Used Kafka to push and listen to event streams and process them.
- Used spring framework for integrating the MVC components with business services.
- Used Node.js and Express.js to develop the relevant backend RESTful API.
- Used Express.JS to run Angular JS on server with mock JSON data and completed the UI development independent of server.
- OAUTH 2.0 authentication framework provides security to Restful web services by generating access tokens to access protected resources.
- Implemented Relational DataBase like Oracle and hands-on creating PL/SQL stored procedures and functions for complex data flows and database operations.
- Expertise in using React.js/Redux to build User Interface, strong knowledge of state store, middleware, action creator, reducer and container.
- Written several Axios service calls like get() and post() to make REST service calls.
- Developed user interface by using ReactJs, Redux for SPA development and implemented client-side Interface using ReactJs.
- Implemented the new message retry mechanism using Kafka in the event of downstream systems. Also implemented Kafka to act as a broker between the consumer and the producer.
- Created responsive design and developed a single responsive website that could be served to desktop, Tablets and mobile users using React Js.
- Worked with Microservice architecture using Spring Boot to modularize code and implemented Rest API's using Spring Rest and integrated Swagger API for documentation.
- Worked on Docker hub, creating Docker images and handling multiple images primarily for middleware installations and domain configurations.
- Creating custom, general use modules and components which extend the elements and modules of core Node.JS.
- Used date-format and moment packages in Node.JS to save the timestamp in database converting into GMT. Involved in Test Driven Development by writing unit test cases.
- Built and deployed Python automation tools to handle routine deployment and infrastructure tasks for Java applications, streamlining the DevOps pipeline.
- Integrating Kubernetes with CI/CD pipelines for Java application deployment and automation.
- Integrated Java EE applications with legacy systems using standardized protocols such as SOAP, REST, and JMS.
- Developed Dynamic server-side applications using Node.js and express.js in enhancing the app functionality and contributing to the increase in user retention.

- Integration of logging and monitoring tools (e.g., Prometheus, Grafana, ELK stack) with Kubernetes for Java applications.
- Utilized GitHub Issues for tracking bugs, feature requests, and project tasks, ensuring timely resolution.
- Implemented logging, monitoring, and error-handling mechanisms within Java EE applications using standard libraries.
- Used Jenkins to build the code and Docker and EKS for deployments.
- Deployed applications using Docker and orchestrated services with AWS EKS for containerized deployments.

Environment: Java 8, RESTful APIs, GraphQL, Spark, MongoDB, AWS (S3, EKS), Spring Boot, IntelliJ IDE, Jenkins, Docker, Tomcat, MySQL, Maven, Kafka, Log4j, JSON.

Full Stack Developer at Fidelity Investments.

Oct 2022– Mar 2024

- Designed and developed RESTful APIs for various project modules based on requirements, collaborating closely with business analysts during grooming sessions.
- Actively participated in sprint planning, providing accurate effort estimations for user stories and bug fixes.
- Implemented core functionality using Spring Boot, Spring WebFlux, and Spring Security, ensuring secure, scalable, and efficient applications with OAuth authentication.
- Built and optimized data models using Hibernate POJOs and configured JPA for seamless database interactions.
- Developed back-end components with Spring Data for the Data Access Layer and integrated MVC architecture for web applications.
- Implemented Event-Driven Architecture using the CQRS design pattern, enhancing application scalability and performance.
- Developed the functionalities under Agile Methodology, JIRA processes and used JIRA for task assignment, bug tracking and fixture.
- Issues & Impact analysis and enhancements.
- Designed dynamic and browser compatible pages using HTML5, CSS3, JavaScript and Angular 15.
- Extensively used Angular UI components like Calendar, Grid, Select, and Uploader etc.,
- Worked on UI/UX to create, modify, develop, and debug interfaces for account management applications.
- Utilized Angular Route for creating Single Page Application (SPA) and incorporating Model-View-Whatever (MV*) development pattern allowing efficient unit testing, and appropriately utilizing Controllers, Services, and Factories with dependency injection.
- Implemented a metrics collection mechanism for the server by utilizing Apache Kafka to stream server-side events.
- Used Apache Kafka in cluster as messaging system between APIs and microservices and worked on Splunk SPL (Search process language) queries, reports and logging using Log4j.
- Used Node.js and Express.js to develop the relevant backend RESTful API.
- Used Interactive data binding, filters, and animation events using Angular 15
- Worked with Microservice architecture using Spring Boot to modularize code and implemented Rest API's using Spring Rest and integrated Swagger API for documentation.
- Worked on Docker hub, creating Docker images and handling multiple images primarily for middleware installations and domain configurations.
- Developed on-demand, combo, and compression server using Angular 15
- Designed various routing mechanisms and Implemented HTTP functionality in Angular to retrieve data from web servers.
- Used Rectangular, Promise and Services in AngularJS for calling API's and building some custom directives.
- Used MemCache to use it as a memory data store to speed up dynamic database-driven websites by caching data.
- Utilized Express.js in developing the REST APIs which processed an average request daily with a better success and perf rate.
- Created RESTful APIs using AWS API Gateway and serverless workflows with AWS Lambda. Connected SNS and SQS to enable event-based messaging.
- Utilized AWS DynamoDB for data storage and managed AWS services like S3 and EC2 for application infrastructure.
- Developed front-end components using Angular to create dynamic, responsive Single Page Applications (SPA) synchronized with server data.
- Designed and developed web pages using HTML5, CSS3, JavaScript, Bootstrap, and Angular, ensuring accessibility and cross-browser compatibility.
- Configured and deployed applications on Tomcat and containerized deployments with Docker managed via AWS EKS.
- Implemented unit testing using JUnit and Mockito, ensuring code quality and reliability.
- Automated CI/CD pipelines with Jenkins and utilized Git and Bitbucket for version control and collaboration.
- Prepared low-level design documentation and collaborated with architects on implementation strategies.

Environment: Java 8, RESTful Web Services, Spring Core, Spring MVC, Spring Boot, AWS (API Gateway, Lambda, SNS, SQS, DynamoDB, S3, EC2), IntelliJ IDE, Angular 10, HTML5, CSS3, JavaScript, Gradle, Jenkins, Docker, EKS, GIT, Log4j, JSON.

Full Stack Developer at JP Morgan Chase & Co.

Sep 2021 – Oct 2022

- Involved in the design and development phases of Agile Software Development.
- Developed java modules implementing business rules and workflows using Spring MVC.
- Involved in sprint planning for the estimation of efforts user stories and bugs.

- Designed and developed the RESTful services using Spring MVC.
- Designed Single Page Web applications using Angular JS and deployed into development.
- Used Various J2EE designs patterns like DTO, DAO and Singleton and Factory Pattern with the help of Hibernate ORM.
- Using Spring Core for IOC Implemented Using DI and developing Restful web Services.
- Performing data management projects and fulfilling ad-hoc requests according to user specifications by utilizing data management software programs and tools like Excel and SQL.
- Involved in extensive DATA Validation by writing several complex SQL Queries and involved in back-end testing and worked with data quality issues.
- Primarily focused on the spring components such as Dispatcher Servlets, Controller and Services.
- Writing Unit Test Cases with help of Mockito Using JUNIT.
- Developed a set of application functionality using CRUD (Create, read, update, delete) features of backbone.js.
- Participated in front end development using JSF 2.0, JavaScript, HTML 5, CSS 3.0.
- Developed RESTful Services and Web Service Clients (JAX-RS or JAX-WS) using jersey framework with data representation in different formats such as XML and JSON.
- Developed dynamic web pages using HTML5, CSS3, Bootstrap, Less, CSS3(SASS) and AJAX.
- Extensively used CSS and Bootstrap for styling the HTML elements.
- Implemented second level cache using Oracle Coherence for IBatis.
- Used jQuery for view rendering of the web pages.
- Worked extensively with persistence context (JPA) implemented by IBatis.
- Gulp is used for modification of JavaScript files and for monitoring the application.
- Designed, configured and deployed Amazon Web Services (AWS) for a multitude of applications utilizing the AWS stack (Including EC2, S3).
- Integrated AppDynamics APM with AWS services and monitored the EC2 instances health on AppDynamics.
- Coordinated with cross-functional teams to manage the lifecycle of GRC tools, including upgrades and bug fixes.
- Developed SOAP services with JAX-WS using Apache CXF framework with data representation in XML format.
- Worked with creating WSDL Documentation to act as an agreement between producer and consumer of the Web service.
- Integrated GRC systems with third-party tools, such as ERP and CRM platforms, using RESTful APIs and SOAP web services.
- Written IBatis Criteria queries for data retrievals and have performed the ORM mappings to map java entities to database tables.
- Conducted regular maintenance activities, including updates, patches, and vulnerability assessments, to uphold the integrity of server certificates.
- Integrated automated testing frameworks (JUnit, TestNG) with GitHub Actions to run tests on every commit.
- Worked on Docker in Creating docker images and configurations using Docker file, worked with docker cli to build, pull and push images to Docker registry. Created a Docker hub which allows us to link to our code repositories.
- Worked with Jenkins for Continuous Integration and Continuous Deployment (CI/CD).
- Created automation framework and test scripts using Selenium Web-Driver for multiple platforms and browsers testing.
- Used Docker Container to address every application across the hybrid cloud and Docker for better collaboration and innovation.
- Using GIT for Source Control and Version Management of all codes and resources.

Environment: Java/J2EE, RESTful Web Services, Hibernate, Spring Core, Spring MVC, JUNIT, Mockito, Eclipse IDE, Angular JS, HTML5, CSS3, JavaScript, Tomcat, MySQL, Maven, GIT, log4j, JSON.

Software Engineer at Cloud Tech.

Jan 2019 – Jun 2021

- Involved in various phases of Software Development Life Cycle (SDLC) on the application like Requirement gathering, Design, Analysis and Code Development.
- Implemented POJO based action by STRUTS and also utilized various Tag Support given by the STRUTS 2.x. Implemented interceptor which is invoked at preprocessing and post processing of a request in STRUTS 2.x.
- Implemented OGNL (Object Graph Navigation Language) of STRUTS 2.x to simplify the accessibility of data stored in the ActionContext.
- Created Actions and action mappings for Struts and consumed data from backend to display on the UI template pages.
- Developed UI pages using HTML5, CSS3, JavaScript, jQuery, AJAX and JSON.
- Developed and implemented the MVC Architectural pattern using STRUTS 2.x framework.
- Worked with Log4J to capture the log that includes runtime exceptions. Loading data from Text Files to Database by using SQL Loader.
- Developed client-side validation code using Javascript and JQuery.
- Implemented IBM WebSphere Application Server to deploy the application.
- Involved in development activities using Core Java/J2EE, Servlets, JSP used for creating web application
- Developed/Customized Java Server Pages (JSP) for Customer UserInterface (UI).
- Implemented JDBC for database connectivity with MySQL Server.

- Worked on sharing objects or variables between servlets using RequestDispatcher() and developed UI pages using HTML5, CSS3, JavaScript, jQuery, AJAX and JSON.
- Developed application using OOPS concepts and design patterns such as Singleton, Abstract Factory and Session Facade.
- Developed and implemented the MVC Architectural pattern using STRUTS 2.0 framework including JSP, Servlets, and EJB.
- Implemented Multithreading feature for processing the multiple requests to achieve high performance.
- Developed the business logic code in Core Java/J2EE, Struts, JDBC.
- Developed backend logic using Core Java including Collections, Multithreading and Exception Handling.
- Deployed Application using Oracle Weblogic Server.
- Worked extensively on JSP tags, JSP Directives and JSP Implicit Objects.

Environment: Java/J2EE, Java 1.8, RESTful Web Services, Hibernate, Spring Core, Spring MVC, JUNIT, Mockito, Eclipse IDE, Angular JS, Tomcat, MySQL, Maven, SVN, log4j, JSON.

EDUCATIONAL DETAILS:

- Master of Science in Computer and Information Sciences, Southern University and A&M College, LA. 2021 - 2022.
- Bachelor of Engineering in Computer Science and Engineering, Sathyabama University, Chennai India. 2015 - 2019.
