EDUCATION

Arizona State University

M.S., Information Systems

• **GPA:** 3.85/4.0

• **Coursework:** Natural Language Processing, Data Visualization, Big Data, AI, Database Management, Cloud Architecture

Jan 2024 - Dec 2025

Tempe, AZ

Anna University

B.E., Computer Science and Engineering

• **GPA:** 3.2/4.0

• **Coursework:** Data Structures, Algorithms, Operating Systems, Computer Networks, Distributed Systems, DBMS

Jun 2019 - May 2023

Chennai, India

TECHNICAL SKILLS

- **Languages:** Python, T-SQL, HTML, CSS, ABAP
- **Cloud:** Microsoft Azure (VMs, VNets, ARM Templates), AWS, Snowflake
- **Data Modeling & ETL:** SQL Server, SAP Datasphere, Azure Data Factory, ELT Pipelines
- **Analytics & Visualization:** Microsoft Excel, Tableau, SAP Analytics Cloud, Power BI, Marketing Analytics, Customer Data Analysis, Campaign Performance Metrics
- **Tools:** Databricks (Delta Lake, Parquet), PySpark, Jupyter, Jira, Github, CI/CD
- **Certification:** CAPM, SAP Business Data Cloud, CCNA

WORK EXPERIENCE

Arizona State University

Research and Teaching Associate

Remote • **Feb 2026 - Present**

- Built and maintained scalable data analysis pipelines to process research datasets, identify behavioral trends, and surface statistically significant findings for faculty review and publication.
- Designed and executed Python-based automation scripts to streamline data collection, preprocessing, and experimental validation workflows across AI/ML research projects, reducing manual processing time by 35%.
- Communicated technical findings and data-driven insights to both research faculty and non-technical stakeholders through structured reports and visual summaries, supporting informed decision-making.

Alvia Systems

Data Science Intern

Remote • **Feb 2025 - Feb 2026**

- Built reusable Python scripts to validate API outputs, analyze customer data across source and target systems, and flag anomalies – enabling repeatable, scalable QA aligned with release quality standards.
- Developed Python-based automated validation pipelines for the Results API (climate risk analytics), reducing data retrieval issues by 80% and eliminating over 12 hours of manual validation effort per release cycle.
- Performed marketing analytics and campaign performance metrics analysis using Excel pivot tables and Power BI dashboards to surface trends, identify reporting gaps, and support weekly business reviews.
- Prepared recurring reports and dashboards in Power BI and Excel for weekly and monthly business reviews, collaborating with stakeholders to understand reporting requirements and ensure data accuracy before distribution.

Tocumulus

Data Analyst Intern

Chennai • **Oct 2022 - Mar 2023**

- Engineered 15+ automated SQL Server reports and Python-based data pipelines, reducing manual reporting effort by 60% and cutting average report turnaround time from 3 days to under 4 hours.
- Designed and maintained a star-schema data warehouse consolidating data from 6 source systems across 3M+ records, improving cross-functional query performance by 45% through indexing and view optimization.
- Built interactive Tableau dashboards tracking 10+ business KPIs (churn rate, MoM revenue, customer acquisition cost), enabling leadership to make data-backed decisions 2x faster.

PROJECT WORK

Enterprise Sales Analytics | [Enterprise Sales Analytics](#)

- Architected end-to-end analytics solution with star schema data model featuring 2 fact tables and 5 dimension tables in SQL Server, enabling centralized KPI tracking across sales and inventory operations.
- Created 9+ SQL views for core business metrics (Revenue, Profit Margin, MoM/YoY Growth, Revenue by Store) as single source of truth, exported to SAP Analytics Cloud for executive dashboards with real-time insights.
- Built interactive SAC dashboards visualizing KPIs, daily trends, and growth analysis, reducing manual reporting time by 40% with comprehensive documentation for knowledge transfer.

Enterprise KPI Anomaly Detection & Root Cause Analytics | [Enterprise KPI Anomaly Detection & Root Cause Analytics](#)

- Designed and implemented a Lakehouse star-schema warehouse (facts/dimensions) for KPI analytics (90 days, 50 stores, 100 products; 45K rows) using ELT patterns, applied data quality validation checks, and created T-SQL views as a single source of truth.
- Built a Python anomaly detection pipeline using a 28-day rolling baseline and Z-score threshold (2.5σ) to detect KPI spikes/drops, classify severity, and write results back to SQL Server.
- Performed root cause attribution by region/store/product, collaborated with business stakeholders to refine requirements, and delivered an executive Power BI dashboard with KPI cards, anomaly severity breakdown, trend analysis, and drill-down visuals with slicers.
- Prepared recurring weekly and monthly reports in Power BI and Excel, aligning with marketing analytics and campaign performance metrics to support senior analysts and business reviews.
