

VINAY KUMAR GANGULA

Data Analyst

Dublin, OH | (805) 885 9352 | Vinaykumargangula1@gmail.com | <http://www.linkedin.com/in/vinaykumar0831>

PROFESSIONAL SUMMARY

Data Analyst with 3+ of experience turning raw business and healthcare data into dashboards, forecasts, and reports that people actually use to make decisions. Comfortable working across the full pipeline, from pulling and cleaning data in SQL and Python to building models and presenting findings to non technical stakeholders. Recent work has focused on supply chain reporting, demand forecasting, and customer segmentation, with measurable results including an 18% lift in forecast accuracy and a 35% cut in reporting turnaround time. Strong hands on experience with Power BI, Tableau, Snowflake, and Python based machine learning tools, and comfortable owning a project from requirements gathering through delivery.

CORE SKILLS

- **Programming and Query Languages:** Python, R, SQL, PowerShell
- **Data Analysis Libraries:** Pandas, NumPy, SciPy, Matplotlib, Seaborn, ggplot2
- **Machine Learning:** Regression, classification, clustering, decision trees, random forest, KNN, XGBoost, CNNs, NLP, scikit-learn, PyTorch
- **Visualization and Reporting:** Power BI, Tableau, Streamlit, Grafana, Shiny for Python, Microsoft Excel
- **Cloud and Big Data:** AWS, Google Cloud Platform, Azure, Microsoft Fabric, Snowflake, BigQuery, Databricks, Apache Spark, Hadoop, Hive
- **Databases:** MySQL, SQL Server, MongoDB, Snowflake
- **Automation and Version Control:** Git, CI/CD pipeline automation
- **Project and Stakeholder Management:** JIRA, Trello, MS Project, Scrum, Kanban, budgeting, timeline management, cross functional collaboration
- **Other Strengths:** Data cleaning and wrangling, A/B testing, KPI design, customer segmentation, statistical analysis, clear communication and presentation of findings

PROFESSIONAL EXPERIENCE

Cardinal Health, Dublin, OH

Nov 2024 - Present

Data Analyst

- Built Power BI and Streamlit dashboards to track supply chain KPIs for operations leadership, cutting reporting turnaround time by 35% and giving managers real time visibility into performance.
- Cleaned and transformed large healthcare datasets stored in Snowflake and SQL Server using Python, Pandas, and NumPy, improving the accuracy and reliability of data used by downstream analytics teams.
- Trained demand forecasting models using random forest and XGBoost in scikit-learn and PyTorch, improving forecast accuracy by 18% compared to the team's prior regression based approach.
- Applied clustering techniques to group customers by purchasing behavior, helping the distribution team plan routes and inventory more effectively and lifting planning efficiency by 22%.
- Automated recurring reporting workflows with PowerShell scripts tied into CI/CD pipelines, reducing manual data refresh work and keeping numbers consistent across teams and time zones.

Orion Technolab, India**Jan 2022 - Apr 2023***Data Analyst*

- Wrote SQL extraction and transformation processes across MySQL and Hive to bring together data scattered across multiple business systems, cutting manual reporting effort by 30%.
- Built regression, KNN, and decision tree models in scikit-learn to identify the main drivers behind revenue changes, improving forecasting accuracy by 15%.
- Designed Tableau and Shiny for Python dashboards that gave cross functional teams a clearer, shared view of performance, improving transparency around how decisions were made.
- Cleaned and prepared large, messy datasets using Pandas and SciPy so they were ready for modeling and exploratory analysis without introducing errors downstream.
- Partnered directly with business stakeholders in a Kanban environment to define KPIs, prioritize analytics work, and keep every project on schedule and within budget.

Value Laden, India**Jan 2021 - Dec 2021***Data Analyst*

- Built Python based ETL pipelines pulling data from five or more sources into cloud data warehouses, increasing data availability by 40% and making pipelines more dependable overall.
- Optimized SQL queries and data models in BigQuery and Snowflake, supporting faster and more accurate reporting for the analytics team.
- Built Power BI and Excel Power Query dashboards to track more than 20 KPIs, giving business stakeholders much better day to day visibility into performance.
- Ran statistical analysis and A/B tests that informed marketing decisions, contributing to a 15% lift in campaign effectiveness and sharper customer segmentation.

EDUCATION

Master of Science in Data Analytics, Indiana Wesleyan University**Apr 2025****CERTIFICATIONS**

- Google Advanced Data Analytics
- Microsoft Azure Fundamentals
- Microsoft Power BI Data Analyst Associate
