

Vineela Chilukuri

JAVA Developer

Ph #: 813-382-6219

Email: vineela24chilukuri@gmail.com

Professional Summary

- 3 years of IT experience as a Java developer in the areas of Analysis, Design, Development, Coding, Implementation, and Testing of web-based and client-server multi-tier applications.
- Proficient in the implementation of frameworks like Spring MVC, Spring AOP, Spring IOC, Spring Boot, Spring Cloud, and ORM frameworks like Hibernate and Core Java SE concepts.
- Expert-level skills in developing applications using Core Java, Servlets, Spring, Hibernate, Collections, JDBC, XML, HTML5, CSS, JSP, JSON, and Design Patterns.
- Expertise in developing SQL Queries in databases viz. Oracle and My SQL and excellent development experience using Agile Methodology.
- Worked on deployment, installation, configuration, and issues with Application servers like Apache Tomcat, and BEA WebLogic.
- Have good experience in using GIT and GitHub for project management and version management.
- Skilled in developing enterprise application testing with JUnit and logging with Log4J for n-tier component-based enterprise Web Applications.
- Capable of quick learning and delivering solutions as an individual and part of a team with good communication and personnel skills.

Education: B-Tech ECE, G. Pulla Reddy Collage, SKU University. 2004

Technical Skills

Programming Languages	Java, SQL, PL/SQL
Frameworks	Spring MVC, IOC, AOP, JTA, Data JPA, Spring Boot, Collection, Hybernate
Databases	Oracle, MySQL, MongoDB
IDE	IntelliJ, Eclipse
Application/Web servers	Apache Tomcat, Oracle WebLogic,
Version Control Tools	GIT, Bitbucket
Operating systems	Windows

Professional Experience:

Client: Citi, Tampa, FL

July 2023 – Till now

Role: Java Developer

Responsibilities:

- Involved in the development of 'Agile Development Methodology/SCRUM', developed and tested the application during various iterations.
- Redesigned the application modules using Spring Boot Rest API/Services and Spring Framework.
- Used Spring Boot for developing Microservices and used REST to retrieve data from the client side using Microservices architecture.
- Implemented REST Microservices using Spring Boot, Generated Metrics with method level granularity.
- Used Spring DATA JPA to create entity mappings and JPA repositories for data retrievals and used Spring JPA transaction manager to handle transactions in the application.
- Used Core Java, Java 8 features, Collection Framework.
- Used IntelliJ, Jenkins, Udeploy, Swager for developing, deploying and testing the applications.
- Used Postman to test the RESTful API for HTTP requests like GET, POST, and PUT.
- Used GitHub to maintain the version of the files and took responsibility for doing the code merges from branch to trunk and creating new branches when new feature implementation started.
- Used the JIRA tool for tracking stories' progress, following agile methodology and sprint planning.
- Supported the QA team with bug fixes during the SIT and UAT phases.

Environment: Java 18, Spring Boot, Microservices, Kafka, Spring Data JPA, Restful API, Docker, Jenkins, Udeploy Apache Tomcat, MongoDB, MySQL, Git, Jira, Agile, Windows.

Company: Virinchi Technologies Ltd, Hyderabad, India

Aug 2017 – Oct 2018

Role: Jr Java Developer

Responsibilities:

- Executed project using the waterfall model and practiced Agile Project Management & performed the Scrum Master role for specific projects/requirements as appropriate.
- Used join point and advice Spring AOP modules for cross-cutting concerns and IOC for dependency injection.
- Dealt with Java design patterns like Data Access Object (DAO) factory, Service Locator, and Business Delegate were used in the design of the server-side Application implementation.
- Implemented REST framework for Aggregator layer implementation which made it a less configured module when compared to Base services using Spring MVC REST.
- Used JMS for reliable and asynchronous exchange of important information such as payment status reports.
- Used XML parser APIs such as JAXP and JAXB for the marshalling and unmarshalling process.
- Used STS for developing, debugging, integrating, and deploying the application.
- Used MAVEN to define the dependencies/plugin-ins and build the application.
- Performed building and deployment of EAR, WAR, and JAR files on test, and stage systems in WebLogic Application Server and used version control tool GIT.
- Used Jenkins as a Continuous Integration tool for configuring and triggering the automation test suite executions.
- Used JIRA Agile for issue/bug tracking to meet certain criteria, each with its state machine.

Environment: Java 8, Spring, Hibernate, Spring MVC, JSP, HTML5, CSS, JMS, REST, GIT, Jenkins, Jira, Windows.
