

VIPUL APPANNAGARI

Austin, Texas | +1 737-341-5447 | appannagarivipul@gmail.com

PROFESSIONAL SUMMARY

Results-driven Full Stack Developer with 6 years of experience designing, developing, and optimizing scalable applications using C# and Angular, paired with strong SQL proficiency for database management and Azure for cloud deployment. Expert in building robust back-end systems with C# (.NET Core), dynamic front-end interfaces with Angular, and efficient database structures using SQL Server and Azure SQL. Skilled in Azure Pipelines for CI/CD automation and AWS services for scalability, delivering secure, high-performance solutions through Agile collaboration, problem-solving, and effective communication with cross-functional teams.

TECHNICAL SKILLS

- **Programming Languages:** C# (.NET Core), Angular, JavaScript (ES6+), TypeScript, SQL (Advanced), Python
 - **Front-End:** Angular, HTML5, CSS3, Bootstrap
 - **Back-End:** C# (.NET Core), RESTful APIs, Entity Framework
 - **Databases:** SQL Server, Azure SQL Database, PostgreSQL, DynamoDB, MySQL, Oracle (basic)
 - **Cloud Platforms:** Azure (App Services, Azure Pipelines, Blob Storage, Azure Monitor), AWS (RDS, DynamoDB, S3, CloudWatch)
 - **Tools:** Visual Studio, Git, Azure DevOps, SQL Server Management Studio (SSMS), pgAdmin, DBeaver, Jenkins
 - **Version Control:** GitHub, Git
 - **CI/CD:** Azure Pipelines, Continuous Integration/Continuous Deployment
 - **Methodologies:** Agile, Scrum, SDLC
 - **Other:** Database Design, Data Modeling, Query Optimization, Security, Scalability, Problem-Solving, Communication
-

CERTIFICATIONS

- AWS Certified DevOps Engineer – Amazon Web Services
-

PROFESSIONAL EXPERIENCE

Full Stack Developer

TIAA – Cary, North Carolina

September 2024 – Present

- Design and develop full-stack applications using C# (.NET Core) for back-end APIs and Angular for responsive front-ends, deployed on Azure App Services, supporting financial systems for 200+ users.
- Build and optimize SQL Server and Azure SQL databases, creating data models and writing complex queries to enhance performance by 20% for equities and fixed income data.
- Implement CI/CD pipelines with Azure Pipelines, automating code and database deployments across multiple environments.

- Collaborate with business analysts and developers in Agile sprints to define requirements, ensuring scalable and secure solutions monitored via Azure Monitor and CloudWatch.
- Troubleshoot and resolve application issues with C#, Angular, and SQL, delivering reliable, user-focused solutions through strong problem-solving skills.

Full Stack Developer

C-Energy – London, UK

March 2023 – September 2024

- Develop C# (.NET Core) back-end services and Angular front-end interfaces for task management applications, integrating Azure Blob Storage and AWS S3 for data handling across 150+ users.
- Model and optimize PostgreSQL and DynamoDB databases with SQL, reducing query execution time by 25% through indexing and stored procedures.
- Automate deployment workflows using Azure Pipelines and GitHub, streamlining releases and improving efficiency by 30%.
- Work with cross-functional teams to design full-stack solutions, ensuring seamless integration and system scalability.
- Solve performance bottlenecks using C#, Angular, and SQL optimization techniques, boosting uptime by 15% with Python scripting support.

Full Stack Developer

Smart Solution – Bristol, UK

September 2021 – March 2023

- Engineer full-stack banking applications with C# (.NET Core) for back-end logic and Angular for front-end dashboards, deployed via Azure Pipelines for 100+ users managing fixed income and equity transactions.
- Design SQL Server databases with advanced data modeling, writing and optimizing SQL queries and triggers to improve transaction processing speed by 30%.
- Partner with developers in Agile environments to build secure, scalable solutions, integrating Azure App Services and AWS RDS.
- Resolve complex application and data inconsistencies using C#, Angular, and SQL, enhancing reliability and user satisfaction.
- Communicate effectively with stakeholders, documenting processes in GitHub for team alignment and efficiency.

Junior Full Stack Developer

Gainsight – Hyderabad, India

March 2019 – August 2021

- Build full-stack employee management applications using C# (.NET Core) for back-end APIs and Angular for front-end dashboards, managing financial data (e.g., payroll) for 500+ users.
- Develop and optimize SQL Server databases, refining queries and stored procedures with SQL to improve data retrieval speed by 50%.
- Support CI/CD automation with Azure DevOps and Git, ensuring consistent deployments across environments.
- Collaborate with business teams to model databases and application features, meeting front-office requirements with scalable designs.

- Troubleshoot issues with C#, Angular, and SQL, reducing manual efforts by 40% using Python automation scripts.
-

EDUCATION

Bachelor of Technology in Electronics and Communication Engineering (ECE)

JNTU Hyderabad
