Summary

Dedicated and result oriented Senior Automation Test Engineer with overall 10+ years of experience in debugging errors and running automation scripts using extensive knowledge of software development life cycle, various frameworks, and tools. Skilled in Cloud Computing, offering in-depth knowledge of AWS services. Strong hands-on experience with Cloud Environment (AWS/ GCP / Azure). Excel in communication, problem-solving, and teamwork to enhance product quality and process efficiency.

Experience

Fidelity Investments – Software Engineer in Test 09/2024 - Present
Smithfield, RI

- Led a team of QA specialists in high-velocity Agile environment.
- Involved in functional and automation testing of client facing web application.
- Contributed to product design reviews, influencing feature priorities and time adjustments.
- Involved in Release and Production support activities.

Uptycs - Senior Automation Test Engineer 04/2021 - 06/2024
Waltham, MA

- Designed and implemented Python automation frameworks and test suites to enhance Uptycs client-facing cloud security platform.
- Successfully optimized infrastructure expenses by 20% through strategic resource allocation and streamlined development procedures.
- Worked closely with DevOps engineers on automating various processes within the Cloud environment.
- Configured, managed, and monitored cloud-based services such as AWS EC2, S3, EBS, ELB, RDS using Terraform.
- Designed automated processes using Infrastructure as Code tools such as Terraform or Cloud Formation for provisioning resources in AWS or Azure environments.
- Maintained and monitored cloud-based applications, services and systems to ensure optimal performance.

Skills

Technical

- Manual Testing
- Jenkins
- Maven
- Java
- Python
- SQL
- JIRA
- AWS
- Terraform
- Confluence

Techniques

- Software Development Lifecycle
- Technical reporting
- QA Engineering
- Project Engineering

Tools

- Selenium
 - TestNG
 - Cucumber
 - Postman
 - Rest Assured
 - Karate
 - JMeter
 - Appium
-

Education and Training

04/2010

Guru Nanak Dev University
Masters of Computer Applications

- Monitored system logs and troubleshoot issues related to the cloud environment.
- Performed capacity planning to determine the resources needed to meet customer requirements in a cost-effective manner.
- Designed and implemented automated testing frameworks with tools like Selenium WebDriver, Cucumber, TestNG, Maven and Jenkins.
- Created, maintained and executed automation scripts for regression testing of web applications.
- Mentored junior members of the QA team on topics such as debugging techniques, automation frameworks and defect tracking systems.
- Utilized Agile methodology to develop software projects within tight deadlines.
- Monitored server logs for anomalies and errors.

Houghton Mifflin Harcourt Publishing Company - Automation Test Engineer

05/2020 - 02/2021

Boston, MA

- Designed and implemented an end-to-end Java-based Automation framework using Selenium for efficient Web Application testing.
- Utilized Eclipse, JAVA, Selenium WebDriver, TestNG, Maven and Apache POI to construct an Automation Framework using the Page Object Model (POM).
- Implemented a Data-Driven approach to ensure consistent functionality across various datasets.
- Implemented the integration of Extent reports into the Automation framework.
- Conducted comprehensive testing of test cases on various browsers and platforms with the assistance of Browser Stack
- Participated in daily scrum meetings with development teams to ensure timely completion of tasks.
- Configured multiple browsers for cross browser compatibility testing.

Wayfair - Test Engineer

07/2019 - 02/2020

Boston, MA

- Created Python based Automation framework for Web Application testing using selenium from the scratch.
- Designed APIs Automation framework using Karate tool.
- Designed, developed, and maintained automation framework for APIs testing following BDD methodology.
- Involved in Micro Services testing for newly constructed Eco System.
- Collaborated with Kafka Admin team to establish Kafka cluster setup on QA and Production environments.
- Collaborated with development teams on fixing bugs and improving existing features.

MAPFRE Insurance - Quality Assurance Engineer

01/2019 - 03/2019

Webster, MA

- Performed manual and automated testing on software applications to ensure functionality and reliability.
- Performed root cause analysis on identified defects in order to determine corrective action plans.
- Worked with Agile and Scrum methodologies to accomplish project milestones and meet demanding timelines.
- Identified, documented, and tracked bugs throughout the development process using bug tracking systems such as JIRA or Bugzilla.

SG Computers Online - Quality Assurance Engineer *01/2017 - 10/2018*

- Performed functional, integration, system and regression testing on various software applications.
- Tested Java-implemented Web Services.
- Ensured effectiveness of REST-based Web Services through functional testing using Postman and Rest Assured testing tools.
- Worked on both SOAP and REST based Web Services.
- Conducted tests on back-end database functionality through SQL queries.

Fidelity Investments - Quality Engineer *05/2015 - 10/2016*
Smithfield, RI

- Evaluated the performance of Web Services built on Middleware Ventura .NET Platform.
- Worked on both SOAP and REST based Web Services.
- Conducted data mining and set up test environments for integration and acceptance testing.
- Created Automation framework and test suites utilizing Para Soft SOA Test tool.
- Utilized SOA Test tool to develop automation test scripts and seamlessly integrate them with MTM.
- Achieved successful deployment by implementing and testing CI/CD process in various projects.

DXC Technology - Quality Engineer *09/2010 - 02/2015*

- Conducted extensive tests on IBM Web Sphere Data Power tool, utilizing SOAP UI and CURL to validate various Web Service Proxy Interfaces.
- Developed effective testing strategies through the creation of Test Scenarios, Plans, Cases, Traceability Matrix, and delivery documents.
- Participated in the preparation of test data for web service testing.
- Implemented security measures on Data Power appliances and successfully conducted end-to-end tests with SOAPUI and CURL.
- Analyzed customer complaints and feedback, conducted investigations, and implemented appropriate corrective actions.
