SUMMARY

Senior Business Intelligence Analyst / Business Analyst with 4.5+ years of experience across technology, financial services, and healthcare, specializing in business intelligence, product analytics, revenue analytics, data analysis, and process improvement. Advanced expertise in SQL, Python, Snowflake, Power BI, Looker, Advanced Excel, Power Query, AWS, dbt, ETL/ELT, dimensional modeling, KPI development, forecasting, and data quality. Delivered analytics across 40M+ records and 90K+ businesses, supported reporting across 12+ global markets, and generated \$55K+ in annualized cost savings through automation and process improvements, translating business requirements into data models, dashboards, and executive reporting for Finance, Product, Operations, Sales, and Technology stakeholders.

SKILLS

Business Intelligence: SQL, Power BI, Python, Snowflake, KPI Development, Dashboard Development, Revenue Analytics, Product Analytics, Variance Analysis, Data Analysis, Data Validation

Business Analysis: Requirements Elicitation, Requirements Management, BRD, FRD, Functional Requirements, User Stories, Acceptance Criteria, Business Rules, Process Mapping, BPMN 2.0, Gap Analysis, RTM, UAT

Data & Analytics: Advanced Excel, Power Query, ETL, Data Quality, Data Mapping, Transformation Rules, Trend Analysis, Root Cause Analysis, Reconciliation, Reporting Automation, Ad Hoc Analysis, Business Impact Analysis

Cloud & Data Platforms: AWS, Databricks, BigQuery, dbt, Alteryx, Tableau, Power Automate

Tools & Delivery: Jira, Confluence, Microsoft Visio, Lucidchart, Postman, REST APIs, Agile Scrum, Backlog Refinement, Sprint Planning, Stakeholder Management, Defect Triage

PROFESSIONAL EXPERIENCE

Stripe Senior Business Intelligence Analyst	Jan 2026 – Present United States
- Led BI initiatives across Stripe Payments, Billing, and Connect, analyzing revenue, merchant activity, product adoption, and regional trends across 12+ global markets; partnered with Finance, Product, Sales, and Strategy teams to define KPIs and reporting requirements. - Built analytical data models in Snowflake using Advanced SQL, Python, dbt, and AWS, integrating 40M+ transaction, merchant, product, and financial records through ETL/ELT pipelines, transformation logic, dimensional modeling, and data-quality controls for enterprise reporting and decision support. - Developed 8+ Power BI dashboards using curated warehouse datasets, Power Query, and DAX, translating stakeholder requirements into 40+ standardized KPIs covering payment volume, revenue, active businesses, take rate, retention, product adoption, and forecast performance. - Evaluated monthly revenue and forecast variances using Advanced SQL and Advanced Excel, reconciling actuals against plan across products, merchants, and regions, identifying volume, pricing, mix, and adoption drivers and reducing reconciliation time from 3 business days to under 1 day. - Performed merchant segmentation and cohort analysis across 90K+ active businesses, combining transaction frequency, payment volume, revenue contribution, retention, and product usage to identify growth segments and inform product adoption, account prioritization, and regional planning. - Led analytical workstreams supporting forecasting, budgeting, and quarterly business reviews, evaluating seasonality, customer mix, product performance, and regional trends across revenue metrics and presenting driver-level findings to Finance and Product leadership. - Automated recurring reporting, reconciliation, and data-preparation workflows using SQL, Python, Power Query, and Advanced Excel, eliminating approximately 30 analyst hours of manual work per month, improving reporting consistency, data validation, and business-review readiness.	
Goldman Sachs Business Analyst – Financial Services	Dec 2021 – Dec 2023 India
- Led business analysis for trade and wealth management products, translating stakeholder needs into functional requirements across client onboarding, portfolio servicing, securities processing, and regulatory workflows, supporting 35+ enhancements from discovery through production release. - Redesigned client onboarding, KYC, and account-maintenance workflows through BPMN 2.0, Microsoft Visio, and stakeholder workshops, simplifying compliance and operations handoffs and reducing onboarding turnaround time by 1.5 business days across processes supporting 18,000+ client accounts. - Analyzed trade settlement, securities processing, reconciliation, and reference-data workflows using SQL, Advanced Excel, and Power BI, reviewing 4M+ transaction records to identify exceptions, data issues, and process gaps, reducing reconciliation effort by approximately 20 hours per month. - Defined functional requirements, business rules, acceptance criteria, and data specifications for reference-data, regulatory-reporting, and risk-management products, maintaining RTMs and coordinating dependencies across 7 Agile releases to strengthen traceability and delivery readiness. - Developed ETL requirements, source-to-target mappings, transformation rules, data flows, and validation specifications using SQL, Lucidchart, and Visio for integrations supporting client onboarding, securities, reference data, and reporting, strengthening data lineage and QA. - Assessed reconciliation, regulatory-reporting, and operational-control processes to identify automation opportunities, defining requirements for Power Automate solutions that eliminated approximately 140 hours of monthly manual processing and generated \$55K+ in annualized operating-cost savings. - Managed backlog refinement, sprint planning, story prioritization, dependency tracking, UAT coordination, and stakeholder reviews through Jira and Confluence, coordinating delivery across 6 cross-functional teams and improving sprint-ready story coverage from 78% to 94%.	
Capgemini Business Analyst	Jan 2020 – Nov 2021 India
- Led business analysis for healthcare technology initiatives supporting payer and provider operations, translating business needs into BRDs, FRDs, functional specifications, and 70+ user stories across claims, eligibility, provider, and member-service workflows. - Facilitated 25+ requirements workshops with healthcare SMEs, product owners, developers, QA engineers, and operations teams, converting business needs into acceptance criteria, process documentation, and prioritized requirements that reduced clarification cycles by 2–3 business days per release. - Performed functional gap analysis and business impact assessments across 6 healthcare applications, identifying redundant processing steps, control gaps, and automation opportunities that eliminated 8+ hours of manual processing per week across targeted workflows. - Mapped current-state and future-state workflows for claims intake, eligibility verification, prior authorization, provider maintenance, and member servicing, identifying process bottlenecks and redesign opportunities that reduced average manual processing time by 18% across targeted workflows. - Developed 6+ Power BI dashboards for claims, enrollment, provider, and operational reporting, translating reporting requirements into standardized KPI and exception views that replaced spreadsheet-based reporting and saved approximately 12 analyst-hours per month. - Coordinated UAT across 5 major application releases, preparing test scenarios, traceability matrices, and acceptance criteria, managing defect triage with business users, QA, and development teams to resolve 90+ defects and reduce post-release issue resolution effort by approximately 30%. - Validated API requirements, source-to-target mappings, business rules, and transaction flows for 20+ integration changes, applying SQL-based data validation and root-cause analysis to reduce recurring data-related production defects by 25% and improve downstream processing stability.	

EDUCATION

Master of Business Administration in Data Analytics
Thomas More University, Crestview Hills, Kentucky
