## SUMMARY

Early-career healthcare data analyst with an M.S. in Applied Economics and hands-on experience in multi-system data reconciliation, data validation, quality audits, recurring reporting, and dashboard development. Proficient in Excel, SQL, Tableau, and Python, with experience identifying missing and inconsistent records, tracing discrepancies to source systems, documenting workflows, and translating data into actionable operational insights.

## TECHNICAL SKILLS

**Tools:** Excel (PivotTables, XLOOKUP/VLOOKUP, SUMIFS, data validation) · SQL · Tableau · Python · PowerPoint

**Data Management:** Data cleaning · Data validation · Data reconciliation · Data-quality audits · Anomaly identification · Multi-source data preparation · Reporting QA

**Analytics:** KPI tracking · Dashboard development · Trend analysis · Recurring and ad hoc reporting · Root-cause investigation

**Business:** Healthcare operations · Process documentation · SOP development · Cross-functional collaboration · Confidential records handling

## PROFESSIONAL EXPERIENCE

### ABIFI Health Care — HR Coordinator

Jan 2023 – Jul 2023

Home health care services (~150 employees, 3 office locations)

Queens, NY

- Built weekly reporting views tracking attendance trends, overtime distribution, timecard completion, and shift coverage; helped managers prioritize follow-up based on data quality issues and operational risk.
- Investigated attendance, scheduling, timecard, and employee-record issues for ~150 employees across ADP, WhenIWork, BambooHR, and Excel exports — including overlapping shifts, missing timecards, unusually long workdays, and inconsistent identifiers; traced discrepancies to source systems, documented recurring patterns, and escalated exceptions for HR/payroll resolution.
- Audited 500+ employee records and authored a cross-location data-entry SOP standardizing naming conventions, date formats, and required fields; reduced recurring entry errors from ~10% to ~6%.

### Prudential — Market Analyst Intern

May 2022 – Aug 2022

Insurance / Financial Services

Singapore (Remote)

- Benchmarked 20+ insurance products across pricing, benefits, coverage limits, and customer positioning; built structured Excel comparison matrices and identified 3 market gaps for stakeholder review.
- Researched insurance coverage, market conditions, and customer needs in South Africa; synthesized findings into management-ready presentation materials supporting market assessment and planning.

## ANALYTICS PROJECTS

### EdTech Learner Engagement & Retention Dashboard

Oct 2025 – Dec 2025

SQL · Tableau (published to Tableau Public)

- Prepared and validated SQL-based datasets covering 17,000+ learner activity records, including engagement, completion, assessment, certification, and conversion metrics.
- Built a 5-tab Tableau dashboard enabling business users to monitor engagement, cohort retention, exam performance, and free-to-paid conversion.
- Extended the reporting workflow with an AI-assisted executive brief that converted deterministic KPI summaries into management-ready narrative; validated every numeric value against the source output before acceptance.

### Workforce Attrition & Retention Risk Analysis

Dec 2025 – Feb 2026

Python (pandas, matplotlib, seaborn) · GitHub

- Analyzed 1,470 IBM HR Analytics employee records using Python to identify turnover patterns across overtime status, role, tenure, department, income band, and job satisfaction.
- Quantified overtime as the strongest observed attrition risk factor (~30% attrition for overtime-exposed employees vs. ~10% otherwise); segmented findings for targeted retention review.

## EDUCATION

Johns Hopkins University — M.S. in Applied Economics

Aug 2025

Syracuse University — B.A. in Economics

Dec 2022
