PROFESSIONAL SUMMARY

Dedicated and result-oriented Java Backend Developer with 7+ years of experience designing and building scalable enterprise applications using Java, Spring Boot, and AWS. Skilled in developing microservices, integrating APIs, and optimizing system performance across airlines, e-commerce, and hospitality domains. Collaborated effectively with cross-functional teams to resolve complex problems and deliver reliable, production-ready solutions, demonstrating strong problem-solving and communication skills.

TECHNICAL SKILLS:

Programming: Java, JavaScript

Frameworks: Spring Boot, Spring Core, Hibernate, Mybatis ,Microservices

Databases: MySQL, MongoDB

Web Services: REST, SOAP, JSON, XML

Cloud: AWS (EC2, S3, EBS, Elastic Search)

Tools: Git, Gitlab, JIRA, Maven, Kafka, Docker,Jenkins

Methodologies: Agile, Scrum, SDLC, CI/CD

PROFESSIONAL EXPERIENCE

Java Developer | Hexaware Technologies

Sep 2024 – Jun 2025 | India

Project: Airlines System

- Utilized Java, Spring Boot, Spring Batch, AWS, Gradle, and Maven Build Tool to improve system functionality and reliability, resulting increase in performance and enhanced operational stability.
- Improved application reliability and maintainability by increasing unit test coverage to 81%.
- Deployed the application in Dev and SI environments. Oversaw post-deployment functionality and performance testing to ensure system stability.
- Utilized AWS services such as Amazon S3, EC2 (Elastic Compute Cloud), and Auto Scaling to build scalable, high-performance applications. These implementations allowed for dynamic scaling and load balancing, which handled varying traffic loads efficiently, maintaining optimal application performance.
- Debugged and resolved issues arising after the migration process.
- Participated in daily scrum meetings to discuss progress, blockers, and coordinate with cross-functional teams as part of Agile methodology.

Java Developer | Swarck Infolabs

Feb 2024 – Jun 2024 | Remote

Project: Hospitality Essentials

- Proactively maintained and enhanced a high-traffic web portal, implementing cutting-edge features and optimizations that resulted in improved performance and user satisfaction.

- Collaborated closely with back-end developers to streamline integration processes and improve project delivery outcomes.
- Pioneered the development of scalable RESTful web services utilizing the Spring Boot framework, driving the adoption of a microservices architecture that improved system reliability and agility.
- Mastered the use of Git for version control, ensuring efficient source code management across multiple projects to facilitate team collaboration and maintain code quality.
- Developed and managed a secure, user-friendly B2C e-commerce platform that enabled businesses to connect, collaborate, and thrive seamlessly.
- The system features three user roles—Admin, Vendor, and Customer—with Admins granted full access to all project data and features, while Vendors and Customers have restricted access based on their role.

Java Developer | Growder Technovation Pvt. Ltd.

May 2023 – Dec 2023 | India

Project: Online Shopping Portal

- B2B e-commerce industry by providing a simple, seamless, secure platform for businesses to connect, collaborate, and thrive.
- The system supports five distinct roles: Admin, OEM, Retailer, Channel Partner, and [fifth role], with Admins granted full access to all project data and features, while other roles have limited permissions.
- An OEM, retailer, or channel partner can self-register by uploading required documents. If the Admin approves, the OEM can upload a product. Once a product is approved by the admin, the approved product list is displayed on the Retailer and Channel Partner screens. OEMs can efficiently add products by uploading an Excel file through the platform.
- Developed and integrated payment processor solutions using REST, SOAP, and other APIs to expand system functionality and enhance user experience.

Java Developer | Advanced Idea Module

July 2022 – Apr 2023 | India

Project: Dr. Mechanics

- Provided vehicle service to customers in a professional and timely manner.
- The system features five distinct user roles—Admin, Mechanic, Sales, Support, and Customer—with the Admin granted full access and management rights, while other roles have limited permissions. The Admin can access and manage all the data and features of the project while the other role has limited access.
- A salesperson submits a request for a mechanic to the admin; upon approval, the mechanic will appear on the user's service screen. If the Admin approves, the mechanic list is displayed on the user service screen.
- Admin is responsible for adding mechanics via Excel file upload.
- The user can view a list of the nearest mechanics.

Java Developer | SHV Infotech

Jan 2020 – Jun 2022 | India

Project: Waste Food Management System

- Admin can view Total States, Total Cities, Total Food Donors, Total Listed Foods, All Food Requests, New Food Requests, Rejected Food Requests, and Completed Food Requests.

- The donor can view requests submitted by users. Users can view available donated food and request food. The user can also request available food.

Java Developer | Deepvan Solutions

Mar 2017 – Nov 2019 | India

Project: AzTool

- Admins can create packages.
- User can manage their profile and bookings.
- Managed package creation and updates.
- Manage users and inquiries.
- Manage issues and manage bookings.

EDUCATION:

Master of Computer Applications (MCA) — Manish Institute of Computer Study, Gujarat, India | 2016

Bachelor of Commerce (B.Com) — Sheth C.D. Barfiwala College of Commerce, Surat, India | 2009
