

Akshay Kumar

SOFTWARE DEVELOPER | ☎ +1 (334) 557 9954 | akshaym.kumar1710@gmail.com

Professional Summary

- Experienced IT Professional with around **5 years** of expertise, involved in all stages of **Software Development Life Cycle (SDLC)** with **Java, Spring Boot** and **J2EE** technologies including analysis, design implementation, testing and maintenance of applications and developing front end interfaces using **React**.
- Solid grasp of **Object-Oriented Programming (OOPs)** principles, **Collections, Exception Handling, Annotations, Enums, Concurrency, Multi-Threading, Lambda expressions**, and **Generics** for robust Java application development, efficient and scalable code implementation.
- Experienced in **JavaScript** frameworks such as **React JS, Angular Js**, along with **Bootstrap** and **jQuery** for streamlining front-end development and for rich user experiences to web applications.
- Used new **Java 11 features** such as **Lambdas, Streams, Observables** and **Completable Futures** etc.
- Developed services that utilize **AWS SDKs (Dynamo DB, API Gateway, Lambda Function, S3)**.
- Good experience in developing test cases with **JUnit, Mockito** for Unit testing in **Test Driven Development**.
- Built **Restful web API** with **Spring, Spring Boot**, and **testing APIs** using **Postman**.
- Experienced in using **JAVA Spring JPA** with **Hibernate** to integrate **MySQL, or SQL Server** into back-end web applications and performing **CRUD** and aggregation operations on a database.
- Extensive knowledge of **Python**, including developing efficient applications, automating tasks, and optimizing code for performance and scalability.
- Strong programming skills in designing and implementation of multi-tier applications using web-based technologies like **Spring Boot** and skilled with **Spring Core** such as **Dependency Injection, Annotations**, and **Configurations**.

Education

Auburn University at Montgomery, Montgomery, AL, USA.

Jan 2022 - May 2023

Master of Science, Computer Science

Relevant Courses: Cloud Computing and Big data Systems, Database Management Systems, Design and Analysis of Algorithms.

GPA:3.5

Jawaharlal Technological University, Telangana, India

Aug 2016 - Nov 2020

Bachelor of Engineering, Computer Science and Engineering

Relevant Courses: Computer Networks, Database Management Systems, Object-oriented programming, Software Engineering.

GPA: 3.5

Technical Skills

- **Programming:** Java, Python, C, C++
- **Java Frameworks:** Spring Cloud, Spring MVC, Spring AOP, Spring Boot, Spring Batch, Spring Security, Spring Data
- **Web Development:** React Js, jQuery, Angular 11/12, JavaScript, CSS2, CSS3, HTML4, HTML5
- **Databases:** Oracle, MySQL, MongoDB, Dynamo DB, NoSQL
- **DevOps Tools:** Jenkins, GitHub, GitLab, Docker, Kubernetes, Amazon Web Services (Aws), Azure, Agile (XP, Scrum), Waterfall
- **Build Tools:** Maven, Gradle
- **Message Brokers:** Apache Kafka, RabbitMQ, Apache Active MQ
- **Web Servers:** Apache Tomcat, JBoss, WebLogic, Web Sphere
- **Version Control:** Git, Bitbucket

Experience

BNY, New York

May 2023 – Present

Software Developer

- Developed and maintained enterprise-level applications using **Java**, ensuring adherence to coding standards and best practices while delivering high-quality software solutions.
- Designed and developed the **REST** based Microservices using the **Spring Boot, Spring Data** with JPA (Java Persistence API) and **Swagger** to interact with API end points of the Microservices.
- Implemented advanced authentication and authorization mechanisms with **Spring Security, OAuth, and JWT**, providing robust protection for sensitive data and securing user interactions
- Integrated **Spring Security** with **Spring Boot** and **Apache Tomcat**, resulting in a 10% improvement in application security and controlled access to resources through role-based access control (**RBAC**) and **JWT** authentication mechanisms.
- Implemented **GraphQL** federation architecture with **React.js** applications, enabling efficient data aggregation and composition across distributed microservices for complex financial data **queries** and transactions.
- Implemented a Microservices architecture using **Spring Boot**, where the **Microservices** interacting through a combination of **RESTful APIs and Kafka** message brokers increased significantly, resulting in a growth of 20% in efficiency and scalability.
- Managed immutable data structures within **React.js** applications using libraries like **Redux** Toolkit, enabling efficient state

management and data consistency in complex financial workflows and transactions.

- Developed a library of reusable **React** components, streamlining **UI** consistency and reducing development time by **20%**.
- Unified data from multiple sources, including **relational databases**, **APIs**, and streaming data, into seamless data pipelines with **Apache Kafka**, enabling high-throughput, low-latency data processing.
- Enhanced software stability and performance through rigorous testing with **JUnit**, **Mockito**, and **JMeter**, reducing bugs by 45% and improving overall reliability.
- Created RESTful APIs with **Node.js** and **Express.js** for real-time data retrieval and manipulation, ensuring efficient communication between the front-end and back-end services.
- Extensive experience with **Oracle** and **PostgreSQL**, alongside **NoSQL** databases like **DynamoDB** and MongoDB. Skilled in designing, developing, and optimizing databases for high availability and scalability.
- Implemented serverless architecture using **AWS Lambda** and **DynamoDB** for insurance applications, leading to a 15% increase in scalability and cost-efficiency in handling variable workloads.
- Designed and implemented an efficient **CI/CD** pipeline using **Git**, **Jenkins**, **Kubernetes** and **Docker** on **AWS**, incorporating **AWS CodePipeline** and **AWS CodeBuild** to optimize deployment speed and streamline the development workflow for a complex web application.
- Implemented **AWS** solutions using **EC2**, **S3**, **RDS**, **EBS**, **Elastic Load Balancer**, **Auto scaling groups**, Optimized volumes, and EC2 instances and created monitors, alarms, and notifications for EC2 hosts using **Cloud Watch**.

CZAR Gaming

Software Developer

Jan 2019 – Jan 2022

- Implemented creational design patterns, including **Singleton**, **Factory**, and **Builder**, to efficiently manage object creation and instantiation. This approach ensured flexible, scalable solutions, optimized resource utilization, and enhanced code reusability across various software projects.
- Implemented functional interfaces using **Lambda expressions** to encapsulate behavior and enable functional programming paradigms in **Java applications**, promoting modularization and composability of software components.
- Designed and developed **microservices**-based architectures, implementing **RESTful APIs** in **Java** to enhance modularity and improve system scalability and maintainability.
- Optimized website performance and responsiveness, resulting in a **20%** improvement in page load times.
- Developed a robust gaming platform using **Java**, implementing core functionalities such as **user authentication**, product catalog management, and secure payment processing.
- Responsible for creating efficient design and developing User Interaction screens using **HTML**, **CSS3**, **Bootstrap**, **JavaScript**, **TypeScript** and **Angular**.
- Leveraged **Hibernate ORM** to design and implement efficient database mappings, ensuring seamless interaction between Java applications and relational databases like **MySQL** and **PostgreSQL**.
- Experienced in implementing **SQL batch** processing techniques in Java applications using **JDBC** (Java Database Connectivity), for efficient execution of multiple **SQL** statements as a single batch operation, reducing overhead and improving database performance.
- Implemented **DevOps** practices with **CI/CD** pipelines using **Jenkins** and **Azure DevOps**, accelerating software delivery and enhancing system reliability.
- Implemented and configured **Splunk** for monitoring and log management across distributed systems, enabling real-time insights into application performance and infrastructure health.
- Designed and deployed applications using Azure services like **Azure App Services**, **Azure Functions**, and **Azure SQL Database**, optimizing performance and reliability.
- Developed automated testing frameworks with **Cucumber** to streamline quality assurance processes, integrated **Postman** for comprehensive API testing, and utilized **SonarQube** for continuous code quality inspection, significantly enhancing code reliability, maintainability, and validating API performance.
- Actively involved in Analysis, Design, Development and User Acceptance Testing. Followed **Agile** and **SCRUM** methodologies.

Projects

- **Web-Based Attendance Management System:** Designed and developed a web-based attendance management system for colleges using Java, significantly improving the efficiency of student attendance tracking and reporting.
- Optimized graphics to enhance performance across diverse devices and collaborated closely with the design team to transform mockups into functional interfaces, creating a seamless user experience with dynamic UI animations and thorough usability testing

Graduate Assistance, Auburn University at Montgomery, Montgomery, AL

Jan 2023 – May 2023

- Provided academic support to students by conducting tutoring sessions, assisting with coursework, and facilitating study groups, resulting in improved student performance and engagement.
- Assisted in the development of course materials and assignments, including creating lectures, instructional guides, and assessment tools, which improved the overall learning experience for students.
- Demonstrated strong communication and mentoring abilities and engaged in discussions and workshops, encouraging an atmosphere of knowledge sharing and collaborative problem-solving.
