

Amruta Kumbhar

San Marcos, Tx 78666 | +1(463)600-9876| amrutabkumbhar@gmail.com | [LinkedIn](#) | [Github](#)

Profile

As a highly motivated, teamwork-oriented, and responsible data engineer with 3+ years of experience, Skilled in utilizing tools and technologies such as Airflow, Dataflow, BigQuery, GCS, and Pub/Sub, I am seeking an opportunity to leverage skills and experience to contribute to a dynamic team and drive business outcomes while also advancing the career.

Experience

ASSISTANT MANAGER - SENIOR ENGINEER, BI_VOIS|JULY2023- AUG2024

- Worked on data feed onboarding on GCP from different sources
- Designed Excel to CSV tool in python to transform .xlsx data file to GCP compatible csv file · Collaborated closely with stakeholders to prioritize requirements and adapt to changing business needs.

DATA ENGINEER|DATAMETICA SOLUTIONS PVT LMTD|FEB2021-JUN2023

Engineer 2 | Apr 2023 - Jun 2023

Engineer 1 | Sep 2021 - Apr 2023

Associate Engineer | Feb 2021 - Sep 2021

- Designed and implemented scalable data pipelines for streaming and batch processing to migrate data from on premise databases to Google Cloud Platform, ensuring reliable data ingestion and processing. · Created and scheduled Airflow dags using Python for efficient workflow management
- Developed Dataflow frameworks in Java for seamless streaming processes.
- Implemented data quality checks and deduplication mechanisms for maintaining data integrity.
- Published messages on Pub/Sub, streaming avro generic messages from pub/sub to GCS files and BigQuery tables.
- Utilized Bigquery for writing complex queries, performing data transformations, and creating DDLs, views, and materialized views.
- Built dataflow frameworks to stream data from Bigquery to Pub/Sub, ensuring near real-time data availability.
- Developed pipelines to extract data from BigQuery tables and load it into CSV files at a GCS location.
- Led a team through the Agile development process to successfully deliver project - Extracting BQ Table Data to GCS Files.
- Implemented Agile methodologies including Scrum or Kanban, resulting in improved project delivery timelines and stakeholder satisfaction.
- Managed project workflows and version control using Git and GitHub.

Education

M.S. COMPUTER SCIENCE| FALL 2024 - Present | TEXAS STATE UNIVERSITY, SAN MARCOS, TX78666

B.E. COMPUTER | 2017-2021 | AISSMS, COE, PUNE-01 - PUNE, MAHARASHTRA | 8.66GCPA

HSC | JUNE 2017 | PACE JUNIOR SCIENCE COLLEGE - POWAI, MUMBAI | 82.62%

SSC | JUNE 2015 | MAHATMA PHULE VIDYALAYA – PUNE | 94 %

Skills & Abilities

- Extensive experience in designing and developing data pipelines for streaming and batch processing
- Proficient in working with Airflow, Dataflow, BigQuery, GCS, and Pub/Sub.
- Proficiency in Java, Python, and SQL
- Familiarity with shell scripting
- Problem-solving skills and attention to detail

Certifications

- GCP Professional Cloud Architect
- GCP Professional Data Engineer
- Astronomer Certification for Apache Airflow Fundamentals
- Java Full Stack
- Python
- C++

Awards

- Rising Star Award, 02/2022

Taking initiative and responsibilities. Independently worked on the understanding and implementation of java based frameworks, streaming ingestion pipelines.

- WOW Award, 07/2022

Taking on responsibilities of solving difficult challenges. Dedicated and ready to help the team, worked on ingestion of complex files.

- HULK Award, 01/2023

Honoured for independently handling complex tasks, confidently interacting with clients, and leading client calls.

Achievements

- Unnat Bharat Abhiyan Coordinator | (06/2019 -06/2020)
- Pune Zonal Intercollegiate Chess(Women) | (08/2018 - 08/2020) | *2nd runner ups*
- NSS Volunteer | (06/2018 - 06/2020)

English Language:

IELTS band 8 (*Full Professional Proficiency*)

Projects

Extracting BQ Table Data to GCS Files

- Implemented a scalable pipeline to extract data from BigQuery tables and export it to GCS files in the bucket. Developed SQL queries, DDLs, and dynamic dags for efficient data extraction and transformation

Loading BQ Table Data to kafka

- Worked on Dataflow framework to read data from BigQuery tables and publish it to confluent

kafka topics

- Converted BQ table records to JSON format for seamless integration with kafka **Streaming Data**

Streaming Data from BQ Tables

- Developed dynamic dags to stream data from raw BigQuery tables to staging tables. Implemented SQL queries, DDLs, views, and materialized views for data transformations and business logic implementation

Streaming Data from Pub/Sub to BQ Tables and Writing to GCS Files

- Developed a robust streaming data pipeline to process data from Pub/Sub to BigQuery tables
- Implemented a Dataflow framework to write streaming data from Pub/Sub within a fixed window to GCS Avro files. Created Airflow dags, DDLs, views, and SQL queries for efficient data processing and storage

Batch Processing - Loading GCS File Data to BQ Tables

- Designed and implemented a batch processing pipeline to load data from GCS files into BigQuery tables. Created scheduled Airflow dags and Dataflow jobs for automated data ingestion.
- Implemented data quality checks and deduplication mechanisms for maintaining data integrity

PERSONAL PROJECTS

Kafka streaming – Aggregating Data

-Worked on a problem statement to aggregate messages being produced on the kafka topic by key and retrieving top 5 corresponding values.

- Achieved solution by creating sample Kafka producer and consumer. Used HashMap to store and aggregate the message data.

Live-posts | Angular10 , CSS, HTML, Bootstrap, Google Firebase (06/2020 - 08/2020)

- The project is based on modern front-end web development using Angular 10 framework. <https://github.com/amruta720/Live-posts>.
- Live Post is a web application where users can add, update, delete, like new posts.
- Database is designed using Google Firebase.

Cafe Booking | Java, Android studio, Google Firebase (06/2019 - 10/2019)

- Cafe Booking is an android application developed using android studio. This application is developed for online booking tables in the cafe at any time and anywhere.
- Cafe Booking application has features like Google Map, Online Payment, etc.

College Fee Payment App | Java, Android studio, Google Firebase (12/2020-03/2021)

- College Fee Payment application developed using android studio. This provides a platform to college students for online fee payment.
- **Razorpay** is used as a payment gateway in this project.

Violence and Nonviolence detection | Python, Google Colab, Kaggle (08/2020-06/2021)

- Violence and Non-violence detection using deep learning models detects if the given input video is violent or non-violent.
- The dataset for this project is taken from **Kaggle**.
