anilreddymsinus@gmail.com ◇ linkedin.com/in/anil-reddy

OBJECTIVE

Full Stack Developer skilled in building scalable, user-centric applications using **Java, Python, React.js, Node.js, Express, MongoDB, SQL, and REST APIs**. Hands-on experience across front-end and back-end with cloud deployment, CI/CD, and Agile practices. Strong understanding of cloud-native architecture, microservices, and DevOps pipelines. Passionate about delivering secure, performant, and maintainable enterprise-grade software solutions.

EXPERIENCE

Software Engineer

Jan 2025 – Present

VulTek Systems

- Spearheading the development of a **Cloud-Native Financial Analytics Platform** enabling real-time insights for Fortune 500 clients.
- Architected **microservices** using **Spring Boot, Node.js, and GraphQL**, integrated with **PostgreSQL & MongoDB**, improving query response times by 42%.
- Implemented **event-driven architecture** with Apache Kafka to process 1M+ transactions daily with high availability and fault tolerance.
- Automated CI/CD pipelines with **Jenkins, GitHub Actions, and SonarQube**, reducing deployment errors by 35% and accelerating releases.
- Designed dashboards with **React.js, Redux, and D3.js** for real-time visualization of KPIs, fraud detection, and compliance tracking.
- Deployed containerized services on **AWS ECS & Kubernetes**, ensuring scalability and cost optimization.
- Integrated **OAuth2, JWT, and RBAC** for enterprise-grade authentication and access control, ensuring compliance with PCI-DSS standards.
- Conducted **load and performance testing** using JMeter, scaling services to handle 50K+ concurrent users.
- Mentored 3 junior developers on microservices design patterns, code reviews, and best practices, fostering team productivity and knowledge sharing.

Full Stack Developer

Jun 2021 – Nov 2022

SanRidge Pvt Ltd, Hyderabad, India

- Designed and developed full-stack web applications using **React.js, Node.js, Express, and MongoDB**, improving performance and scalability by 25%.
- Built and integrated REST APIs with JWT authentication and input validation, ensuring secure and reliable data exchange.
- Automated test scripts with **Selenium and JUnit**, achieving 70% faster regression cycles.
- Utilized **JIRA and Confluence** for Agile sprint planning, backlog grooming, and progress tracking, improving delivery predictability.
- Implemented CI/CD pipelines with GitHub Actions and Docker, reducing deployment time from hours to minutes.
- Developed role-based access controls (RBAC) and implemented **OAuth2.0** integration with third-party APIs.
- Collaborated with cross-functional teams to integrate APIs (Google Maps, Firebase), enhancing product functionality.
- Deployed applications on **AWS EC2 & S3**, enabling reliable hosting with 99.9% uptime.

TECHNICAL SKILLS

Languages	Java, Python, C, JavaScript, TypeScript, SQL
Front-End	HTML5, CSS3, React.js, Redux, Bootstrap, Angular, TailwindCSS
Back-End	Node.js, Express.js, REST APIs, Spring Boot, Microservices, GraphQL
Databases	MongoDB, MySQL, PostgreSQL
Cloud/DevOps	AWS (EC2, S3, Lambda, ECS, EKS), Docker, Kubernetes, Jenkins, GitHub Actions
Testing/QA	Selenium, JUnit, SonarQube, JMeter
Collaboration	JIRA, Confluence, Git, Agile/Scrum
Concepts	Data Science, IoT Analytics, CI/CD Pipelines, OOP, SDLC, Event-Driven Architecture

EDUCATION

M.S. Computer Science, SUNY New Paltz	May 2024
B.Tech. Electronics & Communication, KLEF	May 2022

PROJECTS

Campus Connect Platform – MERN application for student collaboration

- Built a responsive UI with **React.js & Redux**, enabling students to post events, share resources, and network.
- Developed REST APIs with **Node.js & Express**, and integrated **MongoDB/Mongoose** for persistence.
- Implemented secure authentication (JWT + OAuth2) and role-based authorization for students/admins.
- Enhanced scalability by containerizing with **Docker** and deploying on **AWS EC2**.
- Configured **GitHub Actions CI/CD** pipelines, ensuring smooth feature rollouts with zero down-time.
- Increased student engagement by 40% (measured through active sessions) compared to legacy discussion boards.

Real-Time Chat Application – Full Stack MERN app with instant messaging

- Designed responsive UI using **React.js & TailwindCSS**, enabling private and group chats with seamless UX.
- Built **WebSocket APIs** using **Node.js, Express, and Socket.IO** for bi-directional communication.
- Integrated **MongoDB** for storing chat history, user sessions, and delivering real-time typing/online indicators.
- Implemented push notifications and message delivery receipts for reliability.
- Deployed with **Nginx reverse proxy on AWS EC2**, leveraging Dockerized microservices for scalability.
- Achieved 99.8% message delivery success rate in stress testing with 5K+ concurrent users.

Sales Forecasting Model – Time-Series ML for supermarket holiday sales

- Conducted EDA on 100K+ transaction records using **Python (Pandas, NumPy, Matplotlib)**.
- Trained and compared models (ARIMA, Prophet, XGBoost) for time-series forecasting.
- Improved holiday sales prediction accuracy by 17% over baseline models.
- Automated pipeline for data preprocessing and retraining, ensuring continuous improvement.
