

Profile Summary

Analytical professional with hands-on experience in data analysis, machine learning, AI solution development, and Telecommuting. Skilled in Python, SQL, and deep learning to build predictive models, automate workflows, and extract insights from diverse data. Proven ability to deliver scalable AI/ML solutions in cross-functional teams, with experience in healthcare, automation, and enterprise platforms.

Education

Northeastern University, Boston, MA Sept 2024 – Present
Master's in Analytics **GPA: 3.71/4.0**
• Experienced in data analysis, machine learning, & statistical modeling with strong Python, SQL, & data visualization skills. Proven ability to build end-to-end pipelines & deliver insights through EDA, hypothesis testing, & predictive modeling.
• Course work: Machine Learning, Data Visualization, AI & Advanced Analytics, Database Management & SQL.

International Institute of Information Technology, Bangalore, India Sept 2021 – Nov 2022
Executive PG Programme in Machine Learning and Artificial Intelligence **CGPA: 3.53/4.0**
• Specialized in deep learning, neural networks, and NLP, with expertise in model deployment, optimization, and database management for efficient AI solutions.
• Coursework: Deep Learning & Neural Networks, Natural Language Processing, Model Deployment & Optimization

Employment

AI Analyst Intern (CO-OP) July 2025- Present
Deepthink Health Inc., San Ramon, United States
• Collaborated with cross-functional teams to design and validate data quality use cases in healthcare, contributing to the development of data quality standards, functional testing, and deployment strategies for scalable, HIPAA-compliant applications.
• Curated and managed healthcare datasets (clinical, genomic, billing) to train and optimize machine learning and LLM models, improving predictive accuracy and model reliability across production pipelines.
• Conducted model evaluation and QA testing, including Data Quality and Data validation, on pre-production and live data, identifying key performance gaps and implementing enhancements that improved operational efficiency of AI solutions in healthcare analytics.

Machine Learning Engineer - Technical Support Aug 2021- Aug 2024
Automation Anywhere, Bangalore, India.
• Audited 30+ client databases/month to identify data inconsistencies and errors, improving data accuracy by 15%.
• Led over 100 AI-powered automation projects, integrating OCR, NLP, and deep learning models to enhance structured data accuracy by 80% and elevate workflow intelligence.
• Improved model performance by 25% through Python-based data refinement, while managing cloud-hosted automation environments (AWS & GCP) for high availability, secure deployment, and Application development.

RPA Developer-Technology Sales Consultant Nov 2020- Aug 2021
Catnip Infotech Private Limited, Bangalore, India
• Designed and deployed intelligent automation solutions using RPA tools and SQL queries on relational databases, performing ETL processes with Python to eliminate manual intervention in Excel, CRM, Process, and Email automation workflows, improving efficiency by 70%.
• Achieved a 30% increase in client satisfaction by leveraging data science for predictive analytics, including Data analysis and Data profiling.
• Cold called 50+ companies/month to generate leads, resulting in 6 new client referrals.

Technical Experience

Projects
Telecom Churn Prediction using Machine Learning (Python, Scikit-learn, Pandas, Matplotlib, Kaggle)
• Developed a churn prediction model using Logistic Regression and Random Forest, achieving 85% accuracy in identifying at-risk customers.
• Optimized feature engineering and data preprocessing techniques, leading to a 15% improvement in model performance and a 20% reduction in false positives.
• Ranked in the top 10% of participants in the Kaggle competition, demonstrating strong ability to build effective models in a competitive setting.

Melanoma Detection using Convolutional Neural Network (Python, TensorFlow, Keras, Matplotlib, Pandas)
• Built and trained a CNN model using TensorFlow and Keras for melanoma detection from dermoscopic images, achieving 85% accuracy and an F1 score of 0.82, significantly reducing manual diagnostic effort.
• Applied advanced image preprocessing and augmentation techniques (e.g., rotation, scaling, flipping) to improve model generalization, resulting in a 5% boost in validation accuracy.
• Optimized data pipelines for real-time predictions, reducing training time by 20% and enhancing model efficiency for clinical deployment scenarios.

Languages and Technologies

- **Technical Skills:** Data Science, Business Analytics, Computer Science, Computer Engineering, IT
- **Programming:** Python (Pandas, NumPy, Scikit-learn, TensorFlow, Keras), SQL, R
- **Machine Learning & AI:** Regression, Classification, Clustering, Deep Learning, NLP, Computer Vision, Model Deployment
- **Data Engineering & Cloud:** Apache Spark, Hadoop, ETL, MS SQL, Elastic Search, AWS, GCP, Azure
- **Visualization & Other Applications:** Tableau, Power BI, Salesforce, Jira, Confluence, Automation Anywhere, UiPath
