

BHOOMI PONKIYA

Charlotte NC | 980-272-7594 | bhponkiya1@gmail.com | [LinkedIn](#)

SUMMARY

- Highly motivated and results oriented Data Analyst with **3+ years** working experience in the healthcare and especially in the Healthcare and Insurance industry.
- Proficient in **Python, SQL, and R**, with expertise in database management systems including **MySQL, Oracle, and MongoDB**.
- Demonstrated ability to optimize data workflows using **AWS** cloud technologies and create impactful visualizations with **Tableau and Power BI**.
- Deep understanding of Business Intelligence, Data Warehousing concepts, and a strong emphasis on **ETL processes** and the **Software Development Life Cycle (SDLC)**.
- Proficient in conducting **Gap Analysis** to assess and document existing process workflows and evaluate new process advantages.
- At Blue Cross and Blue Shield, spearheaded the development of a comprehensive Pharmacy Performance Reporting system, integrating data from 20 pharmacies to enhance operational efficiency and customer satisfaction.
- Experience at McKesson further honed skills in healthcare data analysis, implementing **ETL** solutions and creating **HIPAA**- compliant dashboards that improved decision-making processes for healthcare providers.
- Adept at employing both **Agile and Waterfall** methodologies, ensures project success through structured approaches and collaborative teamwork.

TECHNICAL SKILLS:

Programming:	Python (NumPy, Pandas, Matplotlib, Seaborn, Scikit-Learn), SQL.
Databases:	MySQL, SQL Server, MongoDB, Oracle.
Visualization Tools:	Power BI, Tableau, Microsoft Excel (Pivot table, LOOKUP), Tableau .
Others:	Git, GitHub, AWS, Agile, SDLC, EMR/EHR, Waterfall, ETL SSIS, SSAS SSRS.
Analytical Skills:	Data Cleaning, Data mining, Data integration, Business intelligence, Data Wrangling,Data Warehousing.
Business Skills:	Impact Analysis, Risk Analysis, Cost-Benefit Analysis, Root Cause Analysis, ROI Analysis

CERTIFICATION

AWS Certified Machine Learning Engineer

PROFESSIONAL EXPERIENCE

Wells Fargo - Data Management Analyst/BA, NC **Oct 2024- Current**

- Collaborated with cross-functional stakeholders to gather business requirements and deliver interim and long-term data solutions with a focus on secure employee **data handling**.
- Designed and implemented a **SQL-based** encryption process for employee **data, mirrored in Alteryx** to automate daily file generation from prior-day data workflow scheduled to run on business days and output to a shared drive.
- Authored and presented design documentation to internal teams, gaining approval for long-term solutions including a rolling 12- month **data view** built on **SQL Server**.
- Developed **YTD** data extract using **SQL** and **Alteryx** for one-time executive reporting, highlighting key business trends for senior management.
- Reverse-engineered complex 400+ line **SQL queries** into streamlined **Alteryx** workflows, eliminating manual data sourcing from third-party vendors; automated weekly employee file delivery with built-in validation and QA.
- Resolved recurring defects in automated data exchange processes related to monthly energy balance files; implemented flowcharts to document **data transfer** between internal systems and external vendors.
- Standardized employee ID fields to a consistent 11-digit format (via zero-padding) across both historical and ongoing datasets; implemented changes in **UAT** and production environments while ensuring no downstream dependencies were impacted.
- Normalized and cleaned weekly reporting data (**CSV & Hyper formats**) in Alteryx, distributed to stakeholders for visualization, and later transitioned to a **predictive historical model** for refurbishment cycle forecasting.
- Built a robust **Alteryx** pipeline integrating multiple external data sources, automating the full reporting cycle from ingestion to dashboard-ready output; generated **Hyper files for dynamic Tableau dashboards** used to monitor refurbishment projects by wave, tier, and stage (planning to closeout).
- Created internal templates and documentation repositories to track workflow requirements, tool usage, and file paths— streamlining onboarding and ensuring full **project transparency** across the team.

BCBS - Data Analyst, NC

Sep2022- Nov 2024

- Demonstrated proficiency in **Python** for data cleaning, analysis, and modeling, and creation of data visualizations, enhancing **data- driven decision-making** processes.
- Identified and prevented \$1.2 million in fraudulent **Medicare** and **Medicaid claims** data by implementing advanced data analytics algorithms and anomaly detection techniques.
- Developed and implemented **SQL** queries and **views** tailored for **Tableau**, driving the creation of dynamic and insightful dashboards for a healthcare insurance sales data helped in 20% reduction in time spent by stakeholders to interpret data. **Transformed** legacy spending **data amounting** to \$15M, increasing market forecasting accuracy by 15% using **Python**.
- Developed comprehensive **Tableau dashboards** tailored for employing advanced methodologies including Level of Detail (**LOD**) expressions, calculated fields, parameterization, and hierarchical structuring.
- Maintained compliance with healthcare regulations and accreditation standards by producing and submitting timely reports to regulatory agencies using **Epic data**.
- Developed many Dashboards like Sales Overview, Discounts, Customer feedback, and **KPIs** to monitor and analyze data for customer satisfaction using **Power BI** and its **DAX** function.

McKesson - Data Analyst Intern, NC

Mar 2022– Aug 2022

- Performed **data cleaning**, normalization, and transformation on patient records and clinical data from **EMR/EHR** systems, ensuring data integrity and readiness for analysis.
- Manipulated the data of 1000+ patients, standardized the patient datasets for **HIPAA** compliance by performing data cleansing.
- Leveraged on **Git** to adopt version control for both documentation and code to track changes in data analysis scripts and accommodate the collaboration of data scientists and analysts.
- Designed and implemented **data profiling** and quality solutions, preserving **data integrity** in healthcare **data warehousing**.
- Generated strategic analytical healthcare reports by leveraging **ETL processes** to integrate data from various external sources, improving healthcare data insights.

EDUCATION

Georgia Tech University – Master of Science in Analytics	Jan 2024 – Current
Georgia Tech University - Micro Masters Data Analytics edX	Jan 2024 – Aug2024
University of North Carolina Charlotte, NC - Bachelor of Science in Biology	Jan 2020 – Dec 2022
Central Piedmont Community College- AS in Biology	Aug 2017 – Dec 2019

PROJECTS

Analyzing Factors Contributing to Nurse Attrition in the US Healthcare System

- Conducted comprehensive research to identify and analyze key factors influencing nurse attrition rates in the US healthcare sector.
- Developed and implemented a structured approach utilizing machine learning techniques (e.g., logistic regression, random forest) on a synthetic healthcare dataset to predict and understand nurse attrition patterns. Applied data preprocessing techniques to handle dataset characteristics and address class imbalance, achieving robust model performance metrics (e.g., recall, F1-score).

Student performance

- Conducted correlation analysis to identify relationships between demographic factors (e.g., gender, age) and student grades. Built regression models to predict student grades based on variables such as study time, attendance, and socioeconomic indicators.
- Discovered that demographic factors (gender, age) moderately influence academic performance. Contributed to understanding factors affecting academic success and dropout rates in higher education. Provided insights that could inform educational policies or interventions aimed at improving student retention.

Note: I am a USC and I do not require any kind of sponsorship
