(US Citizen)

SUMMARY:

- Java Full Stack Developer with **3+ Years of extensive IT experience** with primary Expertise in design, development, implementation, and testing of web-based enterprise applications.
- Strong skills in Core Java, J2EE, Spring, Spring Boot, Hibernate, and modern front-end technologies like AngularJS, Node.js, and React.js.
- Extensive experience with RESTful and SOAP-based web services and working with databases like SQL Server, Oracle, MySQL, and NoSQL (Cassandra, MongoDB).
- Proficient in J2EE design patterns such as MVC, Front Controller, Data Accessor, Value Object, Singleton, and Session Facade.
- Skilled in web application frameworks like Spring MVC, JSF, and Struts.
- Proficient in using AWS cloud services, including RDS, S3, EC2, and ELB, and in Docker for cloud-based services.
- Knowledgeable in Agile/Scrum methodologies and proficient with CI/CD tools like Jenkins.
- Experienced in debugging, code reviews, and mentoring junior developers.
- Hands-on experience with version control systems (GIT, SVN) and build tools (Maven).
- Strong exposure to Application Servers like Apache Tomcat and WebSphere.

TECHNICAL SKILLS:

- **Programming Languages:**
Java, Python, SQL, PL-SQL
- **J2EE Technologies:**
JDK, JDBC (2.0/3.0/4.0), EJB (2.0), Servlets (2.3/2.4/2.5), JSP (1.2)
- **Databases:**
Oracle, SQL Server, MySQL, DB2
- **Database Tools:**
SQL Developer, PL/SQL Developer, MySQL Workbench, Oracle
- **Web Services:**
SOAP, RESTful, JAX-WS, JAX-RS
- **Web Technologies:**
XML, XSL, DOM, HTML5, DHTML, XHTML, CSS3, WML, JavaScript, TypeScript, jQuery, JSON, AJAX, Node.js, AngularJS, ReactJS, GUI, Fuse
- **Web/Application Servers:**
Apache Tomcat AS (4.0/4.2/5.1/6.0/7.0), Tomcat (4.0/5.x/6.x), Apache HTTP Server
- **Frameworks:**
Spring Boot, Bootstrap, Spring (3.0/3.1/4.3/5.0), Hibernate (3.0/3.2/4.0/5.0), Struts (1.x/2.0), ADF
- **Integrated Development Environment:**
Eclipse, NetBeans, IntelliJ
- **Version Control Systems:**
CVS, SVN, ClearCase, Git-Blitz
- **Methodologies:**
Agile, Scrum, Test Driven Development (TDD), Waterfall, Kafka

EDUCATION

B.S. - Information Technology

George Mason University Fairfax, VA

Jan 2019 - May 2021

Associate 'degree – Information Technology

Northern Virginia Community College (NOVA)

Jan 2016 – Dec 2018

Professional Experience:

Safeway

June 2022 - present

Full stack Java Developer

Description:

As a Full stack developer at Safeway, I actively participated in the development of a scalable and user-friendly online grocery delivery platform. This platform empowers customers to browse a wide selection of groceries, customize their orders, and schedule convenient delivery slots, all from the comfort of their homes.

Responsibilities:

- Designed and implemented secure RESTful APIs utilizing Java Spring Boot framework. These APIs facilitated communication between the front-end application and back-end services. (Expertise in implementing the MVC architecture in backend applications using JAVA along with spring Servlets)
- Developed functionalities like product search, order placement, and inventory management using Spring Boot features like controllers, services, and repositories. (Extensive experience in developing applications using Java and various J2EE technologies including JAVA, Spring, REST, SOAP)
- Integrated with a database (potentially using a relational database like MySQL or a NoSQL Postgres database like MongoDB) using Spring Data JPA or a similar library for data persistence.
- Worked on database connectivity using Oracle Postgres SQL Developer and pushing data back and forth from the database
- Implemented unit and integration tests for back-end APIs using frameworks like JUnit to ensure robust functionality and error handling
- Containerized the Spring Boot application using Docker for efficient deployment and scalability.
- Contributed to the design and development of a custom React component library for reusable UI elements like product cards, shopping carts, and checkout forms. (Expertise in Creating Custom Reusable React Components Library)
- Developed dynamic and interactive user interfaces using Reacts virtual DOM and component-based architecture.
- Collaborated with other developers to optimize application performance by leveraging Reacts lifecycle hooks and asynchronous rendering techniques.
- Utilized React Router to manage client-side routing and ensure seamless navigation between different application views. (Worked in using React JS components, Forms, Events, Keys, Router, Animations)
- Configured and deployed the containerized application to a scalable cloud environment using AWS services like EC2 or ECS.
- Employed strong understanding of AWS security practices to ensure a secure and compliant deployment. (Strong understanding of AWS security practices, including the use of IAM, Security Groups, and VPCs)

Environment: JSP, MS Office, HP Quality Center, Jasmine, GitHub, and Jenkins, Kafka, HTML5, CSS3, Bootstrap, Hibernate, SASS, LESS, Java Script, React JS, Redux, Flex, Web Strom.

Description:

The project involves the development of a comprehensive web application designed to enhance the operational efficiency and user experience of Hitachi's internal and external platforms. This application integrates advanced frontend technologies with robust backend services to provide a seamless, responsive, and high-performance user interface.

Responsibilities:

- Integrated with backend services through RESTful APIs, handling POST, PUT, DELETE, and GET methods.
- Utilized Object-Oriented Programming concepts to create reusable and modular code.
- Collaborated with backend engineers to optimize API calls and improve performance.
- Assisted in developing RESTful APIs using Java Spring to handle client-server interactions.
- Utilized Spring Data JPA and Hibernate for efficient data persistence, and designed a scalable microservices architecture with Spring Cloud.
- Assisted in developing and testing user interfaces using HTML5, CSS3, Bootstrap, JavaScript, jQuery, React.js, and Angular with TypeScript.
- Created and maintained reusable React.js components for use across the application.
- Utilized React-Router to implement navigation and routing functionalities, transforming the application into a single-page application (SPA).
- Extensively used Hibernate in data access layer to access and update information in the Oracle database
- Designed and implemented CSS templates for consistent styling across web pages.
- Ensured cross-browser compatibility using React.js and Angular, resolving issues as they arose.
- Analysed and manipulated the Document Object Model (DOM) using JavaScript and related tools.
- Worked on responsive design to develop an isomorphic responsive website for desktop, tablet, and mobile users.
- Implemented form handling and validation using React.js and Angular.
- Developed custom event handlers to improve user interaction within the application.
- Assisted in developing backend services using Java Spring Framework.
- Implemented data fetching and storage solutions using AWS.
- Implemented error handling and logging mechanisms to ensure application stability.
- Used Git for version control, ensuring code quality and collaboration within the team.
- Participated in code reviews to maintain high standards of code quality and consistency.
- Conducted unit and integration tests to ensure code reliability and performance.
- Worked closely with cross-functional teams, including designers, testers, and product managers, to deliver high-quality features.
- Created and maintained technical documentation for both frontend and backend components.
- Continuously improved technical skills by staying updated with the latest trends and technologies in full-stack development.
- Contributed to enhancing the user experience by implementing feedback from user testing and usability studies.
- Participated in Agile development practices, including daily stand-ups, sprint planning, and retrospectives, to ensure timely delivery of project milestones.
