PROFESSIONAL SUMMARY

Detail-oriented business analyst with over 4 years of experience in enhancing operational efficiency and driving compliance in the insurance and banking sectors. I've successfully led requirement analyses and collaborated with stakeholders to implement system updates, utilizing tools like JIRA and SQL to streamline processes and improve data-driven decision-making. Most notably, I translated complex policy rules into actionable documentation, bridging gaps between technical teams and end users, which significantly improved project outcomes and stakeholder satisfaction.

PROFESSIONAL EXPERIENCE

New York Life Insurance

New York, NY, USA

Business Analyst

July 2023 - Present

- Increased claims process efficiency by 20% by gathering and documenting system requirements, developing user stories, and collaborating with stakeholders using Jira to track progress across the software development life cycle.
- Improved cross-team alignment and project traceability by creating detailed specifications and maintaining comprehensive documentation in Confluence, supporting the entire development life cycle and facilitating communication between technical teams and business users.
- Enhanced system compliance and user experience by designing wireframes, mockups, and prototypes in Figma to visualize solutions, ensuring adherence to business analysis and UX best practices throughout the software development life cycle.
- Ensured regulatory and business alignment for system changes by leading end-to-end requirement analysis, managing specifications, and validating enhancements through user stories and acceptance criteria, contributing to successful implementation and compliance.
- Reduced requirement ambiguities by 30% by facilitating workshops with business and legal stakeholders to develop clear prototypes and wireframes, leveraging Figma and Jira to ensure accurate and accessible requirements documentation.

Ally Bank

New York, NY, USA

Junior Business Analyst

May 2021 - June 2023

- Increased sprint completion rate by 15% by facilitating JAD sessions with stakeholders to elicit requirements, prioritizing the product backlog, and leading all sprint ceremonies within the Agile software development lifecycle using Jira.
- Improved process efficiency and reduced requirement clarification time by 20% by conducting in-depth interviews with business clients to analyze requirements and recommending design improvements as part of business process re-engineering initiatives.
- Enhanced defect resolution speed by 25% by managing sprint progress, tracking and triaging bugs, and coordinating cross-functional teams using Jira for issue tracking and quality assurance.
- Ensured 100% user acceptance for new releases by performing User Acceptance Testing, validating requirements, and collaborating with stakeholders to confirm acceptance criteria and defect-free applications.
- Supported data-driven process improvement and requirement validation by utilizing SQL to extract and analyze policy and claims data, enabling root cause analysis and informed decision-making.
