EXPERIENCE

Data Analyst III, Alphatech Systems & Consulting Inc., San Jose, CA

Feb 2025 - Present

- Built scalable analytics and ETL pipelines using SQL, Python, BigQuery and Airflow to track core product and operational metrics including user engagement, retention, churn and monitoring of product success
- Developed and validated churn and retention models using logistic regression and decision trees, combining feature engineering, scenario analysis and hypothesis testing on ETL processed datasets to reduce churn by 18%
- Partnered cross-functionally with Finance, Risk and Operations teams to translate ambiguous business questions into clear product metrics, analytical frameworks and recommendations, accelerating data-informed decisions by 25%
- Led migration of 200+ legacy reports, incorporating SSIS-based transformations to improve data quality, experimentation readiness and long-term trend analysis while reducing maintenance overhead by 45%

Data Engineer, TechUp Software Solutions, India

Nov 2019 - Dec 2021

- Designed and maintained scalable analytics pipelines supporting product experimentation, operational optimization and engagement tracking, contributing insights that drove 60% growth in platform engagement
- Created analytics-ready data models in BigQuery to support A/B testing, optimization experiments and funnel analysis, influencing promotional strategy and increasing regional sales by 35%
- Set up automated data quality validation and experiment metric monitoring, ensuring trustworthy insights for marketing ROI and product performance optimization
- Built production grade ETL workflows using SQL, SSIS, AWS Glue and cloud storage, improving pipeline stability, reducing manual intervention by 40% and enabling faster access to trusted operational analytics data

Data Analyst, Poppins technologies pvt ltd, India

May 2018 - Nov 2019

- Created 20+ HIPAA-compliant dashboards in Power BI focused on operational KPIs, trends and performance drivers, enabling clinical and executive teams to monitor product and operational health in near real time
- Developed automated data ingestion and transformation pipelines using PySpark and AWS Glue, improving data accuracy, availability, and consistency by 50% to support downstream operational analytics
- Applied statistical modeling and ARIMA-based forecasting to analyze long-term operational and optimization trends, improving staffing and scheduling accuracy by 22% through data-backed recommendations
- Implemented data governance, SLA monitoring, and lineage tracking frameworks to improve data quality reliability, achieving 95% compliance across regulated healthcare datasets

TECHNICAL SKILLS

Programming Languages: Python, R, Java, C/C++, HTML5/CSS

Databases: MongoDB, MySQL, PostgreSQL, SSIS, Microsoft Azure, GCP, Databricks, SAP

ETL & Data Visualization: Airflow, QuickSight, Microsoft Excel, Power BI, Tableau, Elasticsearch, Looker, MATLAB

Cloud Technologies/Tools: Kubernetes, Docker, Kafka, Jenkins, Jira, Git, Google Dialogflow, SAS, KQL

AWS: Lambda, EC2, CloudFormation, CodePipeline, API gateway, DynamoDB, S3, CloudWatch, RDS

EDUCATION

Master of Science, Data Analytics

Jan 2022 - Dec 2024

San Jose State University

San Jose, CA

Bachelor of Technology, Computer Engineering

Aug 2017 - May 2021

Silver Oak University

Ahmedabad, India

PROJECTS

Loan Approval Prediction Model | Python, SQL, Tableau, Pandas, NumPy, scikit-learn, XGBoost, Logistic Regression

- Built a loan approval classification model on 50,000+ customer records, achieving 78% prediction accuracy
- Performed data extraction, cleaning, transformation, and exploratory analysis using SQL and Python libraries
- Evaluated multiple algorithms including Logistic Regression, Random Forest, XGBoost and presented actionable insights through interactive Tableau dashboards

Healthcare Data Analytics System | Python, Power BI, AWS Redshift, Airflow, Google Cloud Dataflow, TensorFlow

- Designed and implemented cloud-based ETL pipelines with Airflow, Redshift, and Dataflow, reducing data processing time by 40%
- Created predictive analytics models using TensorFlow and scikit-learn to optimize patient scheduling and improve operational efficiency by 25%
- Developed Power BI dashboards to track 1,000+ patient records daily, enabling timely, data-driven decision-making
