

Jayalakshmi R
QA Automation Engineer

Jayalakshmi.rayankula21@gmail.com
Mobile: +1 908-635-2728

Professional Summary:

- Enterprising professional with 7+ years of experience in Software Design & Development, Application Automation, Project Management & Execution
- Hands-on experience with a variety of automation testing tools and technologies, including Selenium, to ensure the reliability and functionality of software applications.
- Collaborated with cross-functional teams to analyze requirements, define test scenarios, and prioritize testing activities based on project timelines and objectives.
- Designed, executed, and maintained automated test scripts to validate software functionality, identify defects, and ensure high-quality deliverables.
- Proven track record of delivering high-quality results within fast-paced and dynamic environments.
- Solid experience on Automation Framework designs Data driven, Keyword driven, Hybrid Framework, Behavior-Driven Development (BDD) and Descriptive approaches.
- Involvement in all the phases of software Testing life cycle.
- Ability to understand Functional Requirements and Design Documents.
- Comprehensive knowledge of different environments.
- Having good experience working on different projects parley.
- Worked as an individual contributor as well as leading a team.
- Provided technical expertise and support to team members, offering guidance on automation testing best practices and troubleshooting issues as needed.
- An effective communicator with strong relationship management skills with the capability to relate to people at any level of business/ management.
- Well versed in SCRUM/AGILE methodologies to plan, execute, and report on automation testing activities in alignment with project goals.
- Quick in adapting different tools as part of testing or work like Katalon, Apache benchmark, & Load Runner etc...
- Proficient in developing Test Cases, Test Suits, Traceability Matrix, Test Reports, Testing Metrics, and Bug Reporting.

Technical Skills:

Automation Tools/Frameworks	Selenium, TestNG, Cucumber
Scripting Languages	JavaScript, HTML, CSS
Programming Languages	Core Java
Databases	Oracle, MySQL, SQL
Domain Knowledge	Power Supply, ERP Solutions (Finance, HRMS, Sales, Inventory, Procurement).
Build / CI-CD tools	Maven, Jenkins
Testing Tools	HP ALM, Octane

Southern California Edison (SCE), California.

Sep-23 to till date.

QA Engineer

Description:

TSFT (Test Smart Form Tool) is the replacement of the existing TSFT tool with a new double protection suit. This software package contains powerbase/RTS(GUI) and sync services. Powerbase and RTS will be hosted on the transient device (TCA). When the user connects to powerbase via TL2(admin network) and where the user is expected to download the work order and asset information from SAP to the TCA laptop and get disconnected. Test Technician is expected to go out in the field and connect TCA laptop and launches RTS console to perform testing on specific device.

Skills: Automation, Manual Testing.

Environment: Selenium, TestNG, Cucumber, Java, SQL, HP ALM, Eclipse, GIT, ETL, SAP.

Responsibilities:

- Introduced automation scripts to Push data from SAP to other applications (Double package) which increased precision, coverage and reduced manual effort.
- Design, develop, and maintain robust automation frameworks using Selenium WebDriver.
- Select appropriate frameworks (e.g., data-driven, keyword-driven, hybrid) based on project needs.
- Created nested & multiple automation scripts for test data setup to cover end-to-end validation at each layer of the application.
- Implementing design patterns like Page Object Model (POM) for better maintainability and reusability.
- Sharing project status on a timely basis.
- Integrated multiple systems for test data setup through automation scripts.
- Developed test scripts to automate the process of testing in Selenium Web Driver and Java.
- Developed and executed automation Web application using Maven and TestNG.
- Configure CI/CD pipelines to trigger Selenium tests automatically on code changes.
- Validation of data, functionalities of existing systems and new systems.
- Monitor the progress of Cucumber test automation efforts and ensure they are aligned with sprint goals and timelines.
- Develop ETL testing strategies, methodologies, and plans based on project requirements and data integration needs.
- Perform regression testing to ensure that changes to ETL processes do not impact existing data integration workflows.
- Verify error handling and data reconciliation mechanisms in ETL processes to ensure data integrity.
- Following up with different teams on functional clarifications and defects for faster resolutions.
- Raised defects with the logs and critical info about reproducing the defects.
- Took complete ownership of quality of the project from End 2 End prospective.
- Reviewing requirements, test cases and highlighting the gaps.
- Proactively followed up on data set up and defects for faster resolutions.
- Documenting test artifacts such as test plans, test cases, and automation frameworks.
- Involved in Code Review, Test Case reviews and Test Coverage reviews.

Infosys

Southern California Edison (SCE), California

QA Engineer

Ju1-21 to June-23.

Description:

ASPEN Relay Databases is designed to be a repository of relays data Which stores two types of relays NERC CIP and Non-NERC CIP data. Whenever user update, Replace and remove the relays all the transactions will make be recorded in this data base. Whenever these transactions are done, it is expected to update the relay files accordingly for particular the OD43 number which is unique code for every relays.

Skills: Automation, Manual Testing.

Environment: Selenium, TestNG, Cucumber, Java, MySQL, HP ALM, Eclipse, GIT, ETL, SAP.

Responsibilities:

- Introduced automation scripts to Create OD43 data in ASPEN and to Create/Update Relays in ASPEN to reduce the manual effort.
- Created nested & multiple automation scripts for test data setup to cover end-to-end validation at each layer of the application using selenium.
- Sharing project status on a timely basis with offshore team.
- Integrated multiple systems for test data setup through automation scripts.
- Developed Hybrid automation framework using Java, OOPS, Collections, TestNG Data Providers, Reports and Listeners.
- Developed test scripts to automate the process of testing in Selenium Web Driver and Java.
- Developed and executed automation Web application using Maven and TestNG.
- Develop scripts for setting up test environments, running Selenium tests, and capturing test results using CI/CD pipeline.
- Validation of data, functionalities of existing systems and new systems.
- Following up with different teams on functional clarifications and defects for faster resolutions.
- Raised defects with the logs and critical info about reproducing the defects.
- Took complete ownership of quality of the project from End 2 End prospective.
- Involved in Sanity, Integration testing, Functional testing, Performance testing.
- Identify and mitigate risks associated with ETL processes and data integration.
- Plan and design ETL test cases and scenarios based on ETL mappings, data transformation rules, and business requirements.
- Involved in Code Review, Test Case reviews and Test Coverage reviews.
- Review Cucumber scenarios and step definitions to ensure they align with the implementation and maintain code quality.
- Verify that data inserted, updated, or deleted through MySQL operations meets expected criteria.
- Collaborate with developers, testers, and stakeholders to understand MySQL requirements and ensure comprehensive testing coverage.
- Providing training and mentorship to junior team members on automation best practices and tool usage.
- Discussing with different teams regarding integration test and support and making sure to create stories on the same.
- Staying updated with the latest automation testing trends, tools, and technologies.
- Experimenting with new approaches and methodologies to improve the efficiency and effectiveness of automation testing processes.

Kagami
Key Point Technologies (KPT), Hyderabad
QA Automation Engineer

Dec-20 to Jul-21

Description:

A HRMS (Human Resource Management System) is a combination of systems and processes that connect human resource management and information technology through HR software. HRMS may help to revolutionize a workplace.

Skills: Automation, Manual Testing, Test Management.

Environment: Selenium, TestNG, Cucumber, Java, Octane, Eclipse, GIT, Xcode, SQL.

Responsibilities:

- Automated Payroll Process which gives accurate calculations and reduced manual effort for the users by using Selenium.
- Utilized frameworks like TestNG and Cucumber for test execution and reporting.
- Execute Cucumber tests as part of regression testing and continuous integration.
- Implement best practices for test script development, including proper error handling, logging, and reporting by using selenium.
- Scheduling automation jobs in Jenkins for regression testing across UI, API for web application.
- Participating in requirement discussions and reviewing design documents and then creating test plans and getting them reviewed.
- Creating test plans and strategies for automation testing.
- Integrate SQL testing with application testing to ensure data consistency between front-end and back-end systems.
- Identifying test scenarios and determining the scope of automation.
- Conducting regression testing to ensure the stability of the application after code changes.
- Integrating automation scripts with Continuous Integration/Continuous Deployment (CI/CD) pipelines for automated builds and deployments.
- Executing automated test scripts across different browsers, operating systems, and devices.
- Consolidating status, escalating issues, and participating in testing while ramping up features on demand.
- Managing test scripts and project codebase using Git and GitHub for version control and collaboration.
- Collaborating with developers to synchronize testing efforts and ensure alignment with development cycles.
- Maintain documentation related to Cucumber feature files, step definitions, and test results to ensure traceability and knowledge sharing.
- Participating in Code reviews and providing feedback on code changes and pull requests.
- Participating in daily stand up.
- Working closely with developers to ensure timely resolution of identified issues.
- Creating and managing test data required for automated test execution.
- Initiating Fish food / Dog food meetings across teams while releasing new features.
- Initiating Bug triaging with dev team and then creating bugs in Octane.

Kagami
Western Diamond Cement Limited, Ghana
QA Engineer

Mar-19 to Dec-20

Description:

WDCL (Western Diamond Cement Limited) This is a Web application to serve customers in the Cement manufacturing unit in Ghana. This is a customer facing application. This application interacts with different systems including Sales, Inventory, Finance, Procurement, Employee management.

Skills: Automation, Manual Testing, Test Management.

Environment: Selenium, TestNG, Cucumber, Java, MySQL, HP ALM, Eclipse, GIT.

Responsibilities:

- Creating test scenarios and Test cases in HP ALM tool.
- Experienced in build automation using Maven.
- Automated UI scripts to validate front end functionalities by using selenium.
- Writing automated API test scripts using tools like RestAssured or Postman.
- Validating API responses and ensuring data integrity and security.
- maintain and update existing automation scripts to accommodate changes in application features or functionality by using selenium.
- Scheduled regression scripts on a daily basis on remote machines.
- Created different test suites like Sanity suite, Regression suite to certify QA / stage / production environments for faster.
- Identifying End to end scenarios and executing them by involving different teams.
- Design MySQL test cases based on functional requirements, technical specifications, and data models.
- Integrated multiple systems for test data setup through automation scripts.
- Validate MySQL queries and stored procedures to ensure accurate data extraction and transformation for reporting purposes.
- Generating comprehensive test reports using TestNG or custom reporting tools for stakeholders.
- Developed test scripts to automate the process of testing in Selenium Web Driver and Java.
- Integrating TestNG for test execution, grouping, and parallel execution.
- Continuously improve Cucumber scenarios and step definitions based on feedback and changes in requirements.
- Execute Selenium tests as part of the CI/CD pipeline and generate comprehensive test reports.
- Raised defects with the logs and critical info about reproducing the defects.
- Leveraging Selenium WebDriver APIs for browser interactions, element identification, and actions.
- Experienced in Working two parallel projects at a time as I have worked in WDCL and SDCL projects parley.

Kagami
Savanna Diamond Cement Limited, Ghana
Software Engineer

Jan-18 to Feb-19

Description:

SDCL (Savanna Diamond Cement Limited) This is a Web application to serve customers in the Cement manufacturing unit in Ghana. This is a customer facing application. This application interacts with different systems including Sales, Inventory, Finance, Procurement, Employee management.

Skills: Automation, Manual Testing.

Environment: Core Java, Selenium, HTML, Web Service, SQL, XML, Eclipse.

Responsibilities:

- Executing automated test suites across multiple browsers, platforms, and environments by using selenium.
- Monitoring test execution results and analyzing failures for root cause identification.
- Document SQL test cases, test results, and issues encountered during testing for future reference.
- Reporting defects discovered during test execution and tracking them to closure.
- Utilizing TestNG annotations for test configuration, data-driven testing, and assertions.
- Maintain documentation related to Selenium test scripts, configurations, and CI/CD workflows.
- Reporting defects discovered during test execution and tracking them to closure using HP ALM reporting tool.
- Pushing automation code base using GIT.

Education:

- Bachelor of Technology, from **JNTU** affiliated college, Kakinada, Andhra Pradesh, India.
