Skills & Expertise

Programming Languages: Python, JavaScript, HTML, CSS, MySQL

Frameworks & Libraries: React, Node.js, EJS, Django, Bootstrap

Tools & Technologies: Git, GitHub, MongoDB, Microsoft Office Suite, Tableau, Vercel, Netlify, Jira, PowerBI

Soft Skills: Interpersonal Communication, Adaptability, Leadership, Attention to Detail, Creative Thinking, Agile, SDLC, Risk Management, Process Improvement, Requirements Gathering, Team Coordination

Professional Experience

Arthur Cab Leasing Corp | New York, NY

Data Analyst (September 2024 - Present)

- Manage and maintain key internal datasets to support day-to-day operations.
- Utilize Excel, SQL, and database-backed platforms like Cab Maestro and Fleetnet to manage, analyze, and report on internal and operational data.
- Analyze operational data to identify trends and support decision-making.
- Provision and process driver applications, ensuring data accuracy and compliance.
- Assist in generating internal reports and improving workflow efficiency.
- Collaborate with cross-functional teams to support data-driven initiatives.
- Blend administrative precision with analytical thinking to enhance business performance.

General Assembly | New York, NY

Software Engineer Fellow (June 2024 - September 2024)

- Analyzed algorithms, data structures, and computer science fundamentals including analysis on code regression while engaging in 800+ hours of rigorous training pertaining to object-oriented programming and full-stack development.
- Developed Rest API's (JavaScript, Ruby, Python) to handle backend server requests and responses, while utilizing popular frameworks (Node.js, React, Django) to create full-stack projects.
- Maintained git workflow for collaborative web applications by leveraging git-branches and pull requests to distinguish and merge code produced among team members.

Bank Of America - Merrill Lynch | New York, NY

Technical Analyst (Sep 2022 - May 2023)

- Performs user administration accessprovisioning/deprovisioning (additions, modifications, deletions) for applications.
- Categorize, prioritize and handle requests for software applications that support business units or support functions.
- Work under general direction on complex projects usually on specific assigned problems, receiving guidance and direction from more SMEs or manager, as needed.
- Manage information, processes and relationships (Jira, Tableau, Excel) to derive simple solutions with a focus on risk management and mitigation.
- Consult with LOB partners, explain the options available to them and gather their requirements for implementing those services.
- Identify opportunities to drive operational efficiencies & productivity savings through process improvement and automation.
- Perform periodic review of existing written procedures and exercise judgment to identify gaps for updates subject to the review of SMEs or Team Mangers.
- Perform annual application maintenance reviews for supported applications through ARM.
- Provide consultative guidance to clients and internal business partners on best practices and implementation recommendations.

Bank Of America - Merrill Lynch | New York, NY

Software Engineer Intern (January 2022 - August 2022)

- Assigned with a global team of production support analysts for some of the banks payment and fulfillment applications, as well as working with teams in India, Brazil, Mexico, Canada, and in the US.
- Defined requirements with end users and developed unit tests (PyTest) to validate functionality enhancements.
- Collaborate with team members to create approach for development items.
- Developed/enhanced applications.
- Partnered with a small team to design and test application features, contributing to a successful product release timeline.

Year Up | New York, NY

Software Engineer Fellow (June 2021 - December 2021)

- Completed 800+ hours of hands-on training in the Software Development field, gained sizable knowledge in key technologies, including: Power BI, SQL, Python, Java, JavaScript, Data Structures and Algorithms.
- Explored the Software Development Lifecycle (SDLC) and Agile methodologies.
- Developed skills in version control (Git) and web development (HTML/CSS).
- Gained experience in application development frameworks (React, Node.js).
- Enhanced database management and design capabilities.

Education

Hunter College | New York, NY

Bachelors of Arts in Computer Science (Expected Graduation: May 2026)
