EDUCATION

Merrimack College, North Andover, MA
Pursuing Master of Science in Data Science
Graduate Certificate: Data Science

Expected: March 2026
G.P.A: 4.0 (in progress)
September 2025

Relevant Coursework:

- R and Python Programming
- Data Science and Statistics
- Predictive Modeling
- Data Governance and Policy
- Healthcare Analytics
- Visual Data Exploration
- Machine Learning & AI
- Data Science Capstone

University of Hawai'i at Hilo, Hilo, HI
Bachelor of Science in Marine Science, Highest Honors

May 2021
G.P.A: 3.91

Relevant Coursework:

- Quantitative Ecological Surveying
- Statistical Applications in Marine Science
- Python for Data Analysis
- Coastal Methods/Analysis
- Calculus II
- Applied Informatics
- Oceanography
- Organic Chemistry

TECHNICAL SKILLS

Programming: Python, R, SQL

Machine Learning & AI: scikit-learn, XGBoost, PyTorch, Keras, TensorFlow; Elastic Net, tree-based models, clustering (PAM, hierarchical, Gower), PCA

Model Evaluation: ROC/AUC, calibration curves, DALEX, iml, pROC, precrec, PRROC

Statistics: Hypothesis testing, linear & logistic regression, statistical inference
Data Wrangling: pandas, NumPy, dplyr, tidyverse, data.table, Tableau Prep

Visualization: Tableau (Desktop & Prep), ggplot2, Seaborn, Matplotlib, R Shiny

Version Control: Git, GitHub, Visual Studio Code, Jupyter Notebooks, R Markdown

Data Infrastructure: SQL (joins, filters), data pipeline fundamentals

Additional Concepts: Data ethics, privacy & security, prompt engineering, tokenization, LLM fine-tuning

PROFESSIONAL EXPERIENCE

Forestry Fire Technician, USDA Forest Service, Stevensville, MT

May 2023 – Nov. 2023

- Collected and monitored fire weather and behavior data to inform suppression and containment strategies.
- Applied data-driven decision-making in resource allocation, equipment optimization, and safety operations during wildland fire incidents.
- Recorded and reported fire activity metrics to support operational analyses and prescribed burn planning.

Forest Management/Fire, CCNC Americorps, Durham, NC Oct. 2022 – April 2023

- Partnered with federal and state agencies (USFS, NRCS, NC State Parks) to gather and document forest management and burn data.
- Monitored and evaluated fire effects, vegetation recovery, and habitat conditions, ensuring accurate data reporting for conservation initiatives.
- Collaborated across multidisciplinary teams to translate field observations into actionable management insights.

Biological Science Technician, USDA Forest Service, Cloudcroft, NM July 2022 – Sept. 2022

- Utilized GPS, database tools, and spreadsheets to collect, manage, and analyze wildlife population and habitat data.
- Conducted standardized ecological surveys and statistical sampling to assess species abundance and habitat health.
- Supported data quality assurance and environmental monitoring for species conservation and range management.

PROJECTS

Predicting Marathon Finishing Times, Data Science Capstone – Master's Project December 2025

github.com/BugajskiSharp/capstone-project-team-c

- Analyze multi-year Marathon data to predict average finishing times using weather and air quality variables.
- Apply regression and machine learning models to assess the impact of temperature, wind speed, precipitation, dew point, visibility, sea level pressure, and air quality across runner performance groups.
- Deliver data-driven insights to help race organizers, medical teams, and athletes anticipate pacing and support needs under varying environmental conditions.

Hotel Booking Cancellation Prediction, Predictive Modeling – Master's Project October 2025

github.com/BugajskiSharp/hotel-booking-cancellation-prediction

- Built a deep learning model in Python (PyTorch) to predict hotel booking cancellations using 35,000+ reservation records.
- Engineered and standardized features capturing guest behavior and seasonality to improve model accuracy.
- Compared neural network architectures using ROC, AUC, and calibration analysis to deliver actionable insights for retention strategy.

Visualization and Segmentation, Visual Data Exploration – Master's Project August 2025

github.com/BugajskiSharp/data-visual-segmentation

- Transformed and simplified customer data using Tableau Prep and Tableau Desktop to uncover key behavioral patterns.
- Applied clustering techniques in R (PAM and Hierarchical with Gower distance) to segment customers and analyze retention potential.
- Designed clear, interactive Tableau dashboards to communicate insights effectively

ABC Customer Attrition Prediction, Predictive Modeling – Master's Project May 2025

github.com/BugajskiSharp/abc-customer-attrition

- Built a machine learning model in R to predict customer churn probability using a dataset of 10,000+ customers.
- Identified key features impacting attrition and provided actionable business insights.
- Documented analysis in an interactive R Markdown report with visualizations.
