ABOUT

Data Engineer with over 2 years of experience specializing in enterprise-scale cloud migrations and data warehouse modernization. Proficient in designing scalable ETL/ELT pipelines using Azure Data Factory, Snowflake, and Google BigQuery. Expert in automating data workflows through Linux shell scripting and Python, with a strong background in optimizing legacy SQL for cloud performance.

ACADEMIC QUALIFICATIONS

University of Central Florida, Orlando, Florida Master of Science in Data Analytics	Aug 2024 - Dec 2025
Anna University, Tamil Nadu, India Bachelor of Engineering in Electronics & Communication Engineering (ECE)	Aug 2018 - April 2022

WORK EXPERIENCE

JS INDUSTRIAL Agentic AI Developer - Built a scalable AI backend using Python, FastAPI, and Azure OpenAI to automate ticket management; designed a dynamic routing engine (Agentic workflow) that autonomously classifies user intent, reducing manual triage. - Automated payload processing for HubSpot and SCALI ERP to ensure seamless data ingestion. - Implemented secure webhook ingestion and multi channel message handling, delivering a production ready MVP.	Aug 2025 – Dec 2025
COGNIZANT TECHNOLOGY SOLUTIONS Data Engineer - Orchestrated the migration of mission-critical Supply Chain and Point-of-Sale (POS) data from on-premise legacy systems to Snowflake on Azure, enabling real-time inventory tracking. - Designed and maintained Azure Data Factory (ADF) pipelines to ingest high-volume sales data into Google BigQuery, supporting "Store 360" analytics and demand forecasting. - Refactored complex legacy SQL logic for the new cloud environment, optimizing Snowflake warehouse usage and reducing query latency for executive dashboards. - Managed data platform health by resolving pipeline failures and data discrepancies within a three-hour SLA, utilizing Linux utilities for deep-dive log analysis and root cause identification.	Feb 2022 – July 2024

Programmer Analyst Intern - Supported the Data Management team by developing SQL and PL/SQL scripts for data pipelines on the Salesforce platform, ensuring data integrity. - Developed automation scripts using Java, Selenium, TestNG, and Apache POI to support testing frameworks. - Integrated Maven, Jenkins, and Git for CI/CD pipelines, and conducted API validation using Postman and SOAPUI.

TECHNICAL SKILLS

Programming Languages	Python(Pandas, NumPy, Scikit-learn,PySpark), R, PL/SQL, Linux/Unix, Bash
Databases	PostgreSQL, MySQL, MongoDB
Automation & DevOps	Git, Jenkins, Docker, Maven, Selenium, Agentic AI Workflows
Cloud & Data Warehousing	Azure Data Factory (ADF), Snowflake, Google BigQuery, AWS (EC2, S3)
Data Visualization	Tableau, Excel

TECHNICAL PROJECTS

Project 1: A Scalable Cloud-Native Platform for Urban Flood Risk Intelligence and Drone Airspace Safety (AWS) - Designed and deployed an end-to-end, scalable data pipeline on AWS (EC2, S3) to process gigabyte-scale GeoTIFF rasters and satellite imagery for real-time urban flood monitoring. - Engineered a multiprocessing tile-based engine in Python that implemented raster tiling and worker pool execution, significantly reducing latency and increasing throughput for high-resolution geospatial analytics. - Integrated diverse datasets including satellite imagery, Digital Elevation Models (DEMs), simulated sensor streams, and drone path vectors to build a composite UAV risk index for emergency response coordination.	
Project 2: Telecom Customer Churn Prediction - Built an automated Python pipeline for customer churn prediction, achieving 0.85 ROC-AUC using Logistic Regression and Random Forest models with optimized feature engineering. - Implemented Bayesian Networks and Gaussian Mixture Models (GMM) to identify causal churn drivers and categorize customers into 7 distinct behavioral clusters. - Identified \$1.67M in revenue risk and proposed data-driven strategies to recover over \$500,000.
