EDUCATION

B.S. Computer Science
Georgia State University
August 2022 - May 2025

- 3.6 GPA
- Secretary for 2 RSO's
- President's & Dean's List

TECH SKILLS

Data Engineering

- Automated ETL Pipelines
- Data Cleaning & Normalization
- Relational Database Design
- Data Validation & Integrity Audits

Data Analysis

- Advanced SQL (Joins, CTEs, Aggregations, Window Functions)
- Root Cause Analysis
- KPI Development
- Trend & Variance Analysis

Visualization & Reporting

- Power BI
- Tableau
- Excel (Power Query, Pivots)
- Executive Reporting

Programming

- Python (pandas, automation)
- JavaScript
- HTML/CSS
- Git

PROFILE

Highly analytical Data Analyst specializing in automation, data engineering, and scalable reporting systems. Combines strong technical expertise with relentless execution and a results-driven mindset, taking full ownership of complex problems from analysis through optimization. Experienced in designing automated pipelines, structuring relational datasets, and transforming large data volumes into executive-ready insights that drive operational performance. Recognized for building systems that eliminate manual inefficiencies, increase visibility, and strengthen decision-making across teams.

WORK EXPERIENCE

The Home Depot Data Analyst

2025 - CURRENT

- Design and maintain automated data workflows to ingest, clean, and validate large operational datasets, significantly reducing recurring reporting discrepancies.
- Designed SQL-driven analytical frameworks to uncover performance trends, operational bottlenecks, and root causes across large datasets
- Designed and developed interactive dashboards and executive reporting tools that translated raw data into actionable KPIs used for business decision-making.
- Automated recurring reports using Python, eliminating manual processing time and improving reporting accuracy.
- Performed deep data audits ensuring integrity across multiple sources and systems.
- Partnered with cross-functional stakeholders to translate technical findings into clear business insights and recommended operational improvements.

Barfield: Precision Electronics Account Manager / Operations Analyst

2013 - 2020

- Architected and implemented a centralized relational data system used across multiple departments, dramatically reducing repair turnaround time and improving inventory tracking efficiency.
- Designed automated reporting processes that streamlined parts tracking, service workflows, and operational performance measurement.
- Analyzed repair cycle data to identify bottlenecks and implement process optimizations that increased operational efficiency.
- Built custom reporting tools to monitor inventory accuracy & service performance.
- Translated complex operational data into clear performance narratives for client-facing sales meetings, strengthening trust and improving retention.
- Collaborated across technical and non-technical teams to standardize data processes and eliminate manual inefficiencies.

TECHNICAL PROJECTS

- Operational Efficiency Dashboard System (Precision Electronics) : Built a multi-department Excel-based operational database and dashboard system adopted by 6-7 teams and leadership for item tracking, workflow coordination, and reporting; integrated Power BI reporting and a JavaScript/HTML live metrics page displaying turnaround, WIP, completion rate, and throughput.
- GhostBuster Jobs (Python Job Discovery & Ranking Engine) : Developed a Python scraper + API-driven job aggregation pipeline analyzing thousands of listings and scoring postings with a "ghost job assurance" model; publishes ranked results and summary analytics to an HTML site with filters for Metro Atlanta, neighboring states, and remote roles.
