EDUCATION

Northeastern University

Sep 2020 – May 2025

Bachelor of Science in Mechanical Engineering, Minor in Business Administration

Boston, MA

Courses: Thermodynamics, Foundations of Data Science, Financial Accounting and Reporting, Financial Management, Systems Analysis and Control, Foundations of Lean Applications, Supply Chain, Organizational Behavior, Product Design, Computation and Design, Fluid Dynamics, Introduction to Marketing.

Organizations: Phi Gamma Delta Fraternity, Finance and Investment Club, IDEA, DATA Club, Aerospace NU, NU Racers

SKILLS AND TECHNOLOGIES

Languages: Python, C++, Java, SQL, HTML, CSS, MATLAB, R

Softwares: SolidWorks, Excel, AutoCAD, Powerpoint, REVIT, ABAQUS, Arduino, OriginLab, Github, Tableau, Oracle, PeopleSoft

Libraries and Systems: NumPy, pandas, Matplotlib, Altair, SciPy, MacOS, Linux, Apple iOS, Windows

Skills: Financial Modeling, CAD Designing, Product Development, Data Analysis, Project Management, Statistics, Problem-Solving, Reporting, Communication, Analytical Thinking, KPI Analysis

EXPERIENCE

Mechanical Engineering Co-op

Jul 2022 – Nov 2022

Genesis AEC

Medford, MA

- Designed HVAC, chilled water, and steam systems for multi-floor commercial buildings using AutoCAD and REVIT, performing load calculations for spaces exceeding 100,000 sq. ft. to ensure optimal efficiency and compliance with industry standards.
- Collected and analyzed field survey data to size equipment with precision tolerances, streamlining project timelines by 15 percent through cross-functional coordination with architects, engineers, and project managers.

Energy Research Intern

May 2019 – Aug 2019

ExxonMobil

Jakarta, Indonesia

- Analyzed and visualized 500+ energy audit data points using Excel and Origin, identifying cost-saving opportunities that informed strategies to reduce operational energy consumption by up to 12 percent.
- Developed technical documentation and data-driven visual reports adopted by cross-functional engineering teams, improving process optimization decision-making efficiency by 20 percent.

PROJECTS

Capstone - Proton Therapy Mock-Up | *Arduino, MATLAB, Product Design*

Jul 2024 – Dec 2024

- Design and construct a scaled down model of a proton therapy treatment room to be a stress-relieving tool for pediatric patients and their families.
- Design control systems for 2-3 degrees of freedom of motion, construct a model of the treatment room using SolidWorks and collaborated with therapists to implement restraint systems.

Interactive Financial Stock Guide | *Python, pandas, NumPy, Altair*

Jan 2024 – Apr 2024

- Built a stock prediction tool using the Yahoo Finance API to forecast next closing prices based on historical data and market trends.
- Conducted data analysis and created visual dashboards of historical returns statistics to help users evaluate potential investment decisions.

GPS Navigation System | *HTML, CSS, Github*

Sep 2018 – Apr 2019

- Designed and deployed an online GPS platform using Java and HTML, enabling 100+ students to efficiently navigate campus, reducing average travel time between locations by an estimated 15 percent.
- Managed client communications throughout development, testing, and issue resolution, ensuring alignment with project requirements and successful on-time delivery.
