WORK EXPERIENCE

Data Analyst, Infinite Loop Solutions (Client: Kinesso), San Francisco, CA **Jun 2023 – present**

- Analyze multi-channel marketing data (programmatic, search, social) using SQL, Python (pandas, scikit-learn), and Excel to identify trends and optimize ROI.
- Design and automate Power BI/Tableau dashboards to track KPIs, reducing manual reporting efforts by 30%.
- Conduct A/B testing, attribution analysis, and forecasting to evaluate campaign performance.
- Collaborate with cross-functional teams to deliver data-driven insights and recommendations improving conversions and spend efficiency.

Data Analyst, Atlas Labels Pvt. Ltd, Hyderabad, India **Jun 2022 – Jun 2023**

- Utilized SQL, Excel, and Python to analyze manufacturing and sales data, enabling accurate demand forecasting and inventory planning.
- Performed quality control analytics on labeling batches, identifying defect patterns and driving a 15% improvement in first-pass yield. Streamlined reporting processes by automating data pipelines.
- Partnered with supply chain and operations teams to deliver insights on material utilization, cost efficiency, and production scheduling.

TECHNICAL SKILLS

- **Programming & Data Handling:** Python (Pandas, NumPy, Matplotlib), SQL, Excel, ETL
- **Analytics & Statistics:** Regression, Hypothesis Testing, Sampling, Forecasting, A/B Testing
- **Visualization & Reporting:** Tableau, Power BI, Dashboard Design, Data Storytelling

PROJECTS

Prediction for an Online Retail (Pandas, Matplotlib, Seaborn, Lifetimes, Jupyter Notebook)

- Engineered customer segments from transactional data using RFM (Recency, Frequency, Monetary) analysis to identify distinct groups such as 'Champions' and 'At-Risk'.
- Developed a predictive model using the BG/NBD and Gamma-Gamma frameworks to forecast 12-month Customer Lifetime Value (CLV), providing a quantitative basis for targeting marketing and retention efforts.

COVID-19 Global Trends Analysis Dashboard (Tableau, LOD, KPIs, Time-series)

- Engineered a dynamic Tableau dashboard visualizing pandemic trends across 200+ countries using OWID.
- Leveraged LOD calculations and map filters to correlate vaccination rates with mortality trends.

Credit Card Fraud Detection (Random Forest Classifier, scikit-learn, Seaborn, numpy)

- Built a fraud detection system using Logistic Regression and Random Forest on an imbalanced dataset (~0.17% fraud) from Kaggle, applying data preprocessing, model evaluation, and threshold tuning.
- Developed skills in class imbalance handling, precision-recall tradeoff interpretation, ROC AUC analysis, and reproducible ML workflows using Python.

Predicting Medical Insurance Costs Using Machine Learning (Linear Regression, RF, Kaggle)

- Predicted medical insurance costs using machine learning on demographic data.
- Achieved strong predictive performance, with Random Forest outperforming Linear Regression, and identified smoking, age, and BMI as the most influential features.

Telco Customer Churn Analysis (Python, Pandas, Matplotlib, Jupyter Notebook)

- Identified key drivers of telecom customer churn using Python and data visualization.
- Provided insights to help reduce churn by targeting high-risk customers.

CERTIFICATIONS

- [IBM Data Analyst Professional Certificate](#)

Jul 2024–Feb 2025

EDUCATION

Osmania University, Hyderabad, India
B.Sc in Nutrition and Healthcare Analytics

Jul 2022
GPA: 8.3 / 10
